

Abu Dhabi Polytechnic

General Catalog

September 2013

The purpose of this catalog is to provide information about the education and training programs of the Abu Dhabi Polytechnic to prospective students, students, faculty, and staff of AD Poly. Included is information concerning admissions, academic regulations and requirements, services available to students, and academic offerings. While every effort has been made to make this catalog as complete and accurate as possible, changes may occur at any time in requirements, deadlines, curricula, and courses listed in this catalog.

The provisions of this catalog do not constitute a contract, expressed or implied, between any applicant, student, faculty, or staff member of Abu Dhabi Polytechnic or the Institute of Applied Technology. This catalog is for informational purposes only. Abu Dhabi Polytechnic reserves the right to change or alter any statement herein without prior notice. This catalog should not be interpreted to allow a student that begins their education under the catalog to continue the program under the provisions in the catalog.

Dr. Ahmad Alawar

Welcome to AD Poly

Welcome to the Abu Dhabi Polytechnic (AD Poly). All of us here are delighted to welcome you and your family to the Abu Dhabi Polytechnic. AD Poly is a governmental entity managed by the Institute of Applied Technology and licensed by the UAE Ministry of Higher Education and Scientific Research. AD Poly is a strategic government initiative with the noble goal of developing a core of Emirati specialists in high technology areas to support the Abu Dhabi Economic Vision 2030. The training you will receive will be rigorous and challenging, but you will have the benefit of being the pioneers in the field of study and spearheading the development of these high-value industries. From today, you are part of this great vision for the UAE.

We are excited to offer you the opportunity to complete a Diploma/Higher Diploma Program taught by our staff in collaboration with our global strategic partners. We aim to provide you with high quality learning opportunities during this important phase of your life and we believe that each student has the ability to achieve the targeted goals through the supportive environment at AD Poly. Your diploma will take the innovative approach of combining face-to-face teaching alongside industry-based training attachments and projects which will be supervised by staff from the AD Poly whether this is in Abu Dhabi or at the Al Ain campus. This will help you to identify your own personal strengths, develop project management, teamwork and personal skills and the ability to apply these to real-world situations. Additionally, for those interested in academic advancement, we plan to offer the Applied Bachelor degree in two years as a progression to the Higher Diploma.

We believe that each student has the ability to achieve his or her personal goals through the supportive environment present at AD Poly, innovative programs, and the opportunity to work with high quality faculty. For every generation, the future is an exciting challenge; we embrace it with confidence in the enormous potential of education, technology, and innovation. We invite you to join with us in creating an extraordinary future for the nation. We are sure that you will find this to be an exciting and rewarding time which will have a significant impact on the achievement of your future goals.

Dr. Ahmed Al Awar

Director, Abu Dhabi Polytechnic

1. General Information

IAT History and Mandate

The Institute of Applied Technology (IAT) was founded in 2005 through Royal decree of His Highness Sheikh Khalifa bin Zayed Al Nahyan, President of the United Arab Emirates, Ruler of Abu Dhabi as a corporate body with full financial and administrative independence. The establishment of the IAT was an initiative of General Sheikh Mohamed Bin Zayed Al Nahyan, Crown Prince of Abu Dhabi. His Highness envisioned IAT as a world class Career-Technical Education system that would produce the scientists, engineers and technicians needed for the UAE to build a knowledge-based economy.

The Institute of Applied Technology is a dynamic organization which includes senior secondary schools, vocational education and training establishments, colleges, academies and other learning units. IAT also has a significant responsibility on behalf of the Abu Dhabi government to conduct special projects and educational activities that meet the strategic plans.

To achieve the objectives handed down to it by the Abu Dhabi Executive Council, the IAT relies on best practice teaching and learning processes underpinning a modern curriculum, conducted in state-of-the-art facilities. The aim of the IAT is to create the scientific and professional leaders of the future; therefore the Institute, its facilities and its outcomes are continually expanding and evolving as the needs of the Emirate and the nation evolve.

Abu Dhabi Polytechnic

Abu Dhabi Polytechnic was established by IAT and licensed in December 2010 by the Ministry of Higher Education and Scientific Research to offer a dual educational-professional training system with multiple high-tech disciplines (specializations) to produce technologists and engineers to serve the UAE industrial manpower required for Abu Dhabi Economic Vision 2030. In November 2012, Abu Dhabi Polytechnic merged with Al Ain International Aviation Academy.

Academic Degrees and Job Qualification Certificates

Abu Dhabi Polytechnic currently offers accredited Diploma and Higher Diploma programs that were developed with industrial partners and therefore tailor-made to meet industrial needs. AD Poly intends to offer Applied Bachelor degree programs to qualified students who are interested in pursuing further academic studies. AD Poly's programs thoroughly integrate knowledge and practical skills through balanced delivery of instructional material at IAT and on-the-job training by industrial training providers appropriate for each discipline. In addition to academic studies, AD Poly students receive on-the-job training leading to industrial job qualification certificates.

Graduates of the intended educational programs must meet the expectations of industrial standards and be able to perform immediately at graduation. Given the limited population of domestic industrial manpower in the UAE, the programs are designed for students who are not general seekers of degrees but aim to be employees of the targeted industries. Furthermore, industrial representatives and government agencies have to be involved in the development process as well as sponsoring the programs.

The Higher/Advanced Diploma and Applied Bachelor programs are three- or four-year quarter-based programs, where all the quarters including the fourth quarter are compulsory. Each quarter is composed of 10 instructional weeks and one exams week. Quarters are separated by one-week breaks. Figure 1 illustrates the typical structure of the three-year program for the Higher/Advance Diploma and four-year program for the Applied Bachelor program.

| Quarter-Based Program Structure | | | | | | | |
|---------------------------------|--|---|---|--|---|--------------|----------------------|
| YEAR | Degree | 1st Q (10+1) wks | 2nd Q (10+1) wks | 3rd Q (10+1) wks | 4th Q (10+1) wks | | |
| 1 | Advanced Diploma (AD) Applied Bachelor (AB) | IAT (AD Poly) Math, Sciences & Humanities | IAT (AD Poly) Math, Sciences, Humanities & Engineering | IAT (AD Poly) Math, Sciences Humanities, Eng'g & Industrial Program | IAT (AD Poly) Math, Sciences & Engineering | 1 Week Break | 5 Weeks Summer Break |

| 3 | | IAT (AD Poly) Program Specific Advanced Topics | Training On-Campus or On-the-Job Training | Training On-Campus or On-the-Job Training | IAT (AD Poly) Program Specific Advanced Topics | | |
| 4 | | IAT (AD Poly) Major Specific Advanced Topics | IAT (AD Poly) Major Specific Advanced Topics | IAT (AD Poly) Major Specific Advanced Topics | Training On-Campus or On-the-Job Training | | |

Figure 1: A typical Abu Dhabi Polytechnic Advanced/Higher Diploma and Applied Bachelor programs structure (Different programs contain different details)

Location and Facilities

There are two campuses at Abu Dhabi Polytechnic: The Abu Dhabi campus is located in Mohammed Bin Zayed City along the Abu Dhabi–Al Ain Highway and the Al Ain Campus is based on the outskirts of Al Ain near the International Airport. The new Abu Dhabi campus opened September 2012

The Al Ain campus opened in 2009 and is located in the midst of the Al Ain Aviation cluster at the northeast corner of the Al Ain International Airport.

Both campuses offer state-of-the-art facilities and excellent support services for a Career-based Technical Education (CTE) in English.

AD Poly Vision and Mission

The vision of Abu Dhabi Polytechnic is to create skilled professional technologists and engineers capable of performing at the highest international standards to build a knowledge-based economy in the UAE.

The mission of Abu Dhabi Polytechnic is to graduate technologists and engineers with an accredited academic degree and industrially recognized skills and competencies. AD Poly accomplishes this mission through a dual educational-professional training system with multiple high-tech disciplines (specializations) to produce the workforce to serve the UAE industrial manpower required for Abu Dhabi Economic Vision 2030.

The Objectives

Abu Dhabi Polytechnic aims to provide the necessary balance of theoretical studies and practical on-the-job training and performance to prepare students for a career as technologists and engineers. The graduate from the program is expected to be able to:

- Make independent technical judgments and assume responsible duties in their field of specialization under the general supervision of a professional engineer

- Apply current technologies and general engineering principles to solve technical problems
- Assist professional engineers to transfer and develop new technologies
- Understand the management and function of an industrial organization
- Communicate clearly both orally and in writing in English

To achieve these aims, Abu Dhabi Polytechnic is designed to consist of a balance of lectures, tutorials, laboratory/workshop/hangar work, on-the-job training, and on-the-job performance in centers of industry.

At the Abu Dhabi Campus

The Higher Diploma students will spend most of their study period at the IAT campus for instructional training, mathematics and sciences, humanities, and general engineering education. However, the remaining of the study period will be delivered in industrial institutions, which will be responsible to provide the engineering technology know-how, on-the-job training (OJT), and on-the-job performance (OJP). Although the education style at the OJT and OJP is entirely different than the regular academic style, IAT will evaluate on-the-job training and performance based on the outcomes and deliverables to credit hours that are academically equivalent to regular class credit hours. Figure 2 shows the sequence and results of Abu Dhabi Polytechnic. It is expected to offer these programmes from both campuses in the near future.

| Higher/Advanced Diploma (AD), Issued by IAT | | | | | | | | | | | | | | | |

Figure 2: Abu Dhabi Polytechnic program outcomes: academic degrees and industry qualification certificates.

Licensure and Accreditation for Abu Dhabi campus programmes

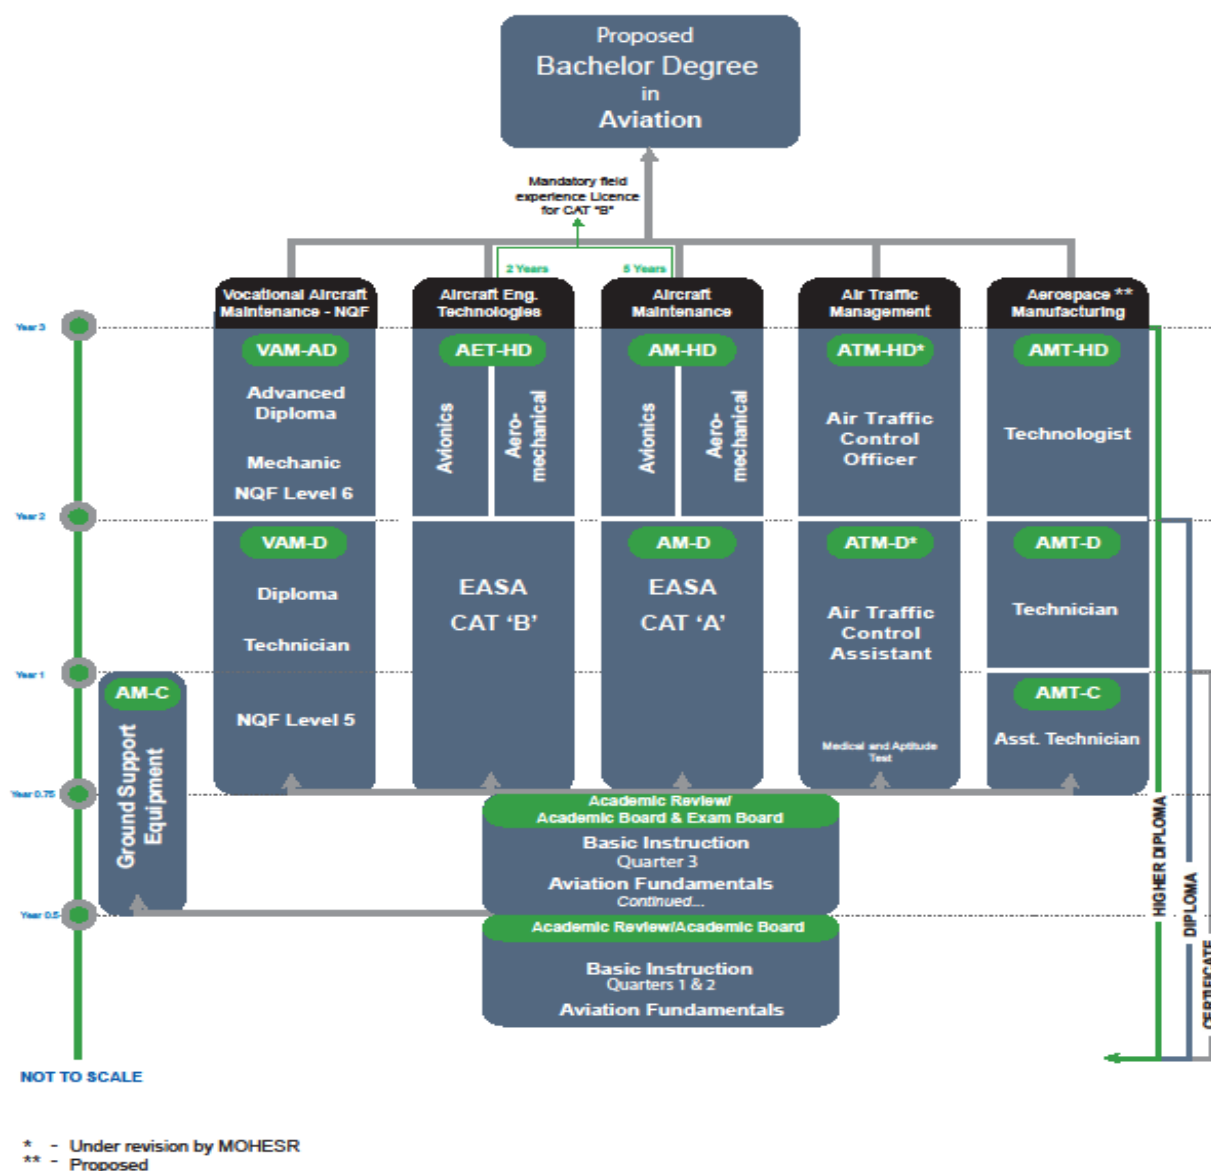

Abu Dhabi Polytechnic was licensed in December 2010. The Higher Diploma in Nuclear Technology and the Higher Diploma in Semiconductor Technology were accredited by the Ministry of Higher Education and Scientific Research (MOHESR). The Higher Diploma in Information Security Engineering Technology and the Higher Diploma and the Applied Bachelor in Petroleum Engineering Technology are currently in the process of accreditation. It is expected that these programmes will be offered at both campuses in the near future.

At the Al Ain Campus

Academic Pathway

The Al Ain campus offers academic programs in aviation technologies leading to both academic and licensing qualifications. All students entering the Academy undergo similar training and educational experiences, at least for the initial phase of their training. Upon fulfilling the entry requirements for the Academy, students undergo a mandatory Basic Instructions (BI) period of education. After the end of the BI period, an academic review of performance for each student decides the next stages of his training based on their successes during the BI period. Struggling students are recommended to undergo a certificate in Aircraft Maintenance-Ground Support Equipment where the rest of the students continue a second BI period that will decide a final pathway of training leading to academic diploma, higher diploma, and or license. Student with a Grade point Average (GPA) for the BI periods exceeding 3.00 are given the opportunity to continue on the Higher Diploma in Aircraft Engineering Technology and later qualifying for EASA Cat B1 or B2 licenses. Students with a GPA between 2.00 and 3.00 for the three BI quarters are set on the Diploma/Higher Diploma in Aircraft Maintenance Technology and can qualify for EASA's Cat A license with an opportunity to continue a Cat B option. In addition to earning the above mentioned academic and professional qualifications, intentions for the future are to provide a continuing educational pathway to all students. These programmes will be offered from at the Abu Dhabi campus from September 2013

The chart below depicts the educational pathways available for students at AD POLY. The vocational Aircraft Maintenance programs parallels that of the Diploma and Higher Diploma in Aircraft Maintenance programs. VAM offers programs that meet the National Qualification Framework of the UAE at levels 5 and 6 simultaneously

Admission Requirements

- Grade 12, GPA 70% (Science/Technical Stream)
- IELTS 5.0 minimum
- Admission Test
- Interview

Programs offered at the Al Ain campus cover the traditional academics and the technical professional simultaneously. The programs offered are:

- Academic
 - Aircraft Engineering Technology higher diploma;
 - Aircraft Maintenance certificate, diploma, and higher diploma;
 - Air Traffic Management certificate, diploma, and higher diploma.
- Professional
 - EASA Part-66 and GCAA CAR Category 'B' Licenses;

- EASA Part-66 and GCAA CAR Category 'A' license;
- ICAO 051, 052, 054 certification/training;
- Special programs and training courses in aviation related areas.

International Accreditation

The Al Ain campus is an "EASA Part 147" and "GCAA CAR 147" approved maintenance training organization. The campus has the distinction of being the only such facility in the Middle East to hold both approvals. "EASA" is the European Aviation Safety Agency, which holds responsibility for regulation of civil air transport. It promotes the highest common standards of safety and environmental protection in Civil Aviation in Europe and worldwide.

National Accreditation

“GCAA” is the General Civil Aviation Authority of the UAE. The GCAA is the Federal Aviation Authority which focuses on regulating Civil Aviation and ensures safety and security of aircrafts and passengers in the UAE. The GCAA is a member of the International Civil Aviation Organization (ICAO) and is internationally recognized. The academy also has the support of the Ministry of Higher Education and Scientific Research (MoHESR). The Ministry sets the standards for curriculum, teachers and their qualifications and the overall outcome of the program. All academic programs offered at the Academy are accredited by and under the standards of the MOHESR.

Facilities at the Al Ain campus

The Al Ain campus houses a complete set of aircraft maintenance training facilities to include:

- 3,000 square meters hangar housing a variety of aircraft used in maintenance training.
- A collection of training aircrafts to include: a Dornier 228, a Bell Jet Ranger Helicopter, a Falcon 20, and an Aermacchi B326 jet.
- 24 state-of-the-art classrooms, as well as 10 workshops and 14 laboratories equipped with electronics, avionics and mechanical training aids.
- Workshops equipped with fully-operational training devices that demonstrate the functioning of landing-gear, fuel systems, de-icing and anti-skid systems, and flight control systems.
- A Variety of jet engines to illustrate their technology and operation.
- A Learning Resource Center that includes a Library, an Internet Centre, and Computer Based Training classrooms.

Al Ain Partners

The Al Ain campus is proud to have partnerships with many prestigious organizations and become a major educational and training provider within the Al Ain Aerospace Cluster. The Abu Dhabi Polytechnic: Al Ain's partners contribute to the success of the programs and provide opportunities for students to develop knowledge and experience during and after graduation from AD Poly.

2. Admissions

Admission Policy

Abu Dhabi Polytechnic has two official admission intakes per year. These intakes are in the first and third quarters of the academic year. A student who has completed their Secondary School education (or will complete their Secondary School education by the time they are to enroll in AD Poly) and has an official transcript may apply.

All applications for admission have to be submitted through the Ministry of Higher Education and Scientific Research NAPO system. http://ws2.mohesr.ae/napo/Default_AR.aspx

An offer of admission is only valid for the quarter for which a student applies. If the applicant is offered an admission but is unable to attend, the applicant may request in writing to postpone the admission for the next admission cycle. Admission consideration shall depend upon availability of seats, program offerings, and other considerations such as sponsor concurrence for certain programs.

Admission Requirements

The regular admissions requirements for Abu Dhabi Polytechnic are the following:

- Science stream students are eligible for admission. (Arts stream students may be accepted for admission under certain circumstances.)
- Science stream applicants should have an overall average above 70%. (Arts stream applicants should have an overall average above 80% for consideration.)
- Applicants must have International English Language Testing System (IELTS) Academic band 5.0 or equivalent and a successful test and interview in English. (Applicants who do not meet this criterion may enroll in the Foundation Program.)
- Applicants must hold UAE nationality. (Under special circumstances, non-nationals may be allowed to enroll in certain programs.)
- Applicants for certain programs will be required to take special entrance examinations based on program sponsor requirements.

The following general documents are required for admission to Abu Dhabi Polytechnic:

- A completed application form
- An official Secondary School Certificate certified by the Ministry of Education
- A photocopy of the applicant's passport
- International standardized test of English (IELTS or TOEFL)
- A copy of UAE nationality documents
- A medical fitness certificate
- Six recent color photographs
- Any other diplomas, transcripts, or relevant documents

Applicants holding a Foreign Secondary School Certificate

Applicants who went to secondary school abroad should obtain a high school certificate awarded based on 12 years of study and accredited by the Ministry of Education. The applicant is required to provide the original Secondary School Certificate. Applicants who hold a non-UAE Secondary School Certificate must submit a Certificate Equivalency from the Ministry of Education.

Pre-admission/Entry Examination and Interview Policy

The Entry Exam is designed to assess the applicant's aptitude in English reading, writing, speaking and listening. In addition it will assess the applicant's aptitude in Mathematics. An interview panel conducts interviews of all students with applications for admissions for the upcoming academic cycle. The panel makes final recommendations for admissions based on the student's interview, suitability and motivation to pursue academic and vocational aerospace studies.

Late Admission

The Director or designee may agree, under certain circumstances, to admit some applicants to non EASA approved programs after a course has already commenced. Late admissions will only be granted up to a maximum of thirty (10) days from the beginning of classes. In such a case, the Director shall direct the appropriate Head of Programme and the Exams & Curriculum Department to administer any required tests.

Re-Admission to AD Poly Programs

Students who have left an AD Poly Programme may re-enter to the same programme at a later date provided that:

- The application for re-entry is made within 12 months of leaving
- The Director approves the re-entry.

Students who apply for re-entry into a different programme of study must complete a new application and submit supporting documents for the new programme. In these circumstances the Registrar's Office may waive resubmission of some documentation provided the details have not changed since the last application.

Repeating Students Policy and Guidelines

At the AD POLY, we believe in career success and opportunity for all. Our students are drawn from both the traditional system of learning, IAT, and mature entry. Whatever the entry mode, the originating systems significantly contrast the AD POLY in terms of the methods of deliver, the professional focus and aims as well as the learning objectives and level of curricular rigor.

It is accepted that student and sponsor expectations as well a time and financial expenditure may require some level of protection against the investment expended on those students.

For the purpose of clarity, "Repeat" will mean one of the following:

- Repeat of a courses as agreed by the Exam Board
- Repeat of a complete program as agreed by the Exam Board
- Repeat of a previous year or stage of training as agreed by the Exam Board

The guidelines that will allow due consideration and recovery of students are as stipulated below.

- An Examination Board comprised of Heads of Programmes, Senior, Technical and Academic Faculties, Student Support Services and the Student's Sponsor will review each case and recommend those fit for repeat of the failed modules on the basis of the academic records on each student.
- Only students, who have failed a maximum of 2 subjects and have not been permitted a repeat already, are eligible for a repeat.
- Only one repeat is permitted per program per student.
- Repeat students are entitled to the same number of assessment attempts as if for the first time.

- Students undergoing repeat modules must attend all lessons. Failure to do so, without acceptable mitigating circumstances, will lead to the student being refused further training.

Withdrawals

Students can request to withdraw from the programme at any time. The request is however to be initiated by the academic advisor, and routed through the Head of Programme, Student Counsellor and then (if applicable) the students sponsor. Final authority to withdraw will be given by the Director to the student. If a student fails to follow withdrawal procedures, he will be given a failing grade in all coursework attempted in that quarter.

Re-enrollment

Students can request to re-enrol only within one year of their leaving date. **They must retain the current admission requirements mentioned in the admission policy.**

- All requests to return after the student has withdrawn must be recommended to the Director.
- Students cannot re-enrol in the AD POLY later than one week after the start of the course for which they are re-enrolling.

Foundation Program

The foundation program for Abu Dhabi Polytechnic is the Edad Program at IAT's Al Rowdah Academy. The AD Poly foundation program at Al Rowdah Academy is a two- or four-quarter program developed to provide students with foundation level competency in English to prepare them to achieve a minimum IELTS Academic band of 5.0. For more information about the Edad Program at the Al Rowdah Academy visit their link on the IAT website at www.iat.ac.ae.

Admission Requirements for Foundation Program

The basic admissions requirements for Abu Dhabi Polytechnic Foundation Program are the following:

- Only Science stream students are eligible for admission.
- Science stream students should have an overall average above 70%.
- IELTS Academic band 4.0 or equivalent and a successful test and interview in English.
- Applicants for certain programs will be required to take special entrance examinations based on program sponsor requirements.

All documents presented by applicants to complete a file for admission become the property of the AD Poly. Accepted or rejected applicants may not reclaim any of the documents.

Student Inquiries

Inquiries regarding admission status, academic grades, transcripts, timetables or information about examinations can be made at the Student Support Services.

Campus Hours

All **classes start at 8:00** am and continue throughout the working hours of the day. Class periods are 50 minutes in duration and are separated by breaks. Students should be ready, follow their scheduled classes, and present in class before a class commences. The normal working day for the administrative-management staff is from **8:00 am until 4:00 pm**.

Students are encouraged to stay afterhours on campus to work on class assignments, projects or other activities. All students **must wear an ID card at all times** while on AD Poly grounds, and should sign in and out and abide by the same rules applicable regular AD Poly days. Students should use specially designated area for students during this time. Students are not permitted to use staff desks, computers or

telephones without permission. Food must be consumed in the designated food areas. The campus is closed to students on Fridays, Saturdays and public holidays. AD Poly operating hours are shortened during the holy month of Ramadan.

3. Student Administration

The Student Services Department is responsible for admission, enrolment, coursework progress, scheduling, and student records. Students can obtain all relevant forms they need from the Student Services Department.

The Student Services Department is responsible for administering student records and to ensure that records are accurately maintained and students are aware of their responsibilities. For example, students must ensure the Student Services Department is notified of any changes in their contact details. Student records contain a variety of information about students, such as student identification numbers, student contact details, and academic results. Student records are kept to track progress and program requirements. The AD Poly maintains guidelines related to the privacy and confidentiality of student records.

Website

The AD Poly website is located at <http://www.adpoly.ac.ae/>. Visit our site for updates or newly adopted academic policies.

Registration

Registration is the process of enrolling in classes. From September 2012, AD Poly will have switched over from a manual registration system to an on-line registration system in which students may select their courses and section numbers online via the Banner System. Course selections must be approved by an academic adviser or programme head in person after being submitted online but prior to being finalized. Students entering their first quarter at AD Poly may select from complete first-quarter schedules developed for each program.

Orientation Program

Orientation meetings and activities are arranged for all new students joining Abu Dhabi Polytechnic. Students are oriented regarding the facilities, general guidelines and expectations, and academic policies and procedures.

Academic Measures

All courses taken by the students are entered into the student's record. All grades attained by the students are taken into account in calculating their cumulative GPA. English is the language of instruction at the Abu Dhabi Polytechnic in all the courses.

4. Assessment Policy

Philosophy of Assessment

Assessment is the process of forming a judgment about the quality and extent of student achievement or performance, and therefore by inference a judgment about the learning itself. Assessment inevitably shapes the learning that takes place – what students learn and how they learn it – and should reflect closely the purposes and aims of the course of study.

The aims of assessment include:

- Formally certifying student achievements for program progress and external audiences
- Improving and promoting subsequent learning through feedback that is clear, informative, timely and relevant
- Improving the quality of the curriculum (courses and programs)
- Evaluating the effectiveness of the teaching process and facilitating continuing improvement
- Demonstrating accountability to AD Poly, accrediting bodies, employers, and the wider community

Assessment methods may take a variety of forms: the key criterion for choice among methods should be appropriateness to the learning outcomes. Assessment should be criteria based rather than norm referenced, and may include individual or collaborative achievement or both. The requirements for student success should be made clear, and the overall strategy should be to develop in students the ability to evaluate the quality of their own work in order to equip them to function as professionals with a commitment to life-long learning.

Assessment practices within AD Poly are based on the general principles of criteria based assessment. These are that the desired learning outcomes for a course of study are clearly specified; assessment tasks are designed to indicate progress towards the desired learning outcomes; and, the assessment grade is a measure of the extent to which the learning outcomes have been achieved.

The standard of performance that is required for the award of a particular grade is a judgment that is based on the professional expertise of the various staff that contributes to the assessment process and is informed by experience with accepted standards, including, where appropriate, standards in other institutions. There is no pre-determined distribution of grades as the outcome of assessing a group of students.

Non-Academic Programs- EASA / GCAA Course Assessment

The EASA / GCAA assessment system is based entirely upon EASA Part 66 / GCAA (Engineering Licenses and Syllabus). Students enrolling on an EASA approved program will be briefed of the EASA Pt 66 / GCAA requirements and should be aware of and familiar of the EASA Syllabus at all times.

Students will be issued with the relevant extracts of the curriculum manual at the beginning of each module. This is intended to allow students insight into the module learning objectives, methodology of assessment and program structure. Assessment is conducted at the end of each module in the form of a multiple choice exam and an essay portion required of few of the modules as shown in the table below. All modules are assessed by means of Multiple Choice Questions. In addition, three modules require the student to answer short 20 minute Essay questions. In the case of practical evaluation, the assessment process will be conducted throughout the practical training phase through direct observation or practical testing.

Each multiple choice question is given a choice of **up to 3 answers** (EASA / GCAA requirement). However, only one of them shall be the absolutely correct and expected answer. Questions are designed to be answered in 1 minute and 15 seconds (EASA / GCAA requirement) and students are not permitted to use a calculator or any other mechanical or electronic aids. The pass mark for ALL EASA / GCAA examinations and assessments is 75%.

EASA / GCAA Assessments cannot be compensated. You should be aware of the following EASA Pt 147 / GCAA rules concerning multi-choice examinations:

- Any mock examinations will be conducted under the same rules as a final examination. Whilst the mock is reflective of the scope of the assessment it will not be directly reflective of the content of any Final Module Examination.
- You will not be allowed to keep any examination papers and you will not be given any mock examination papers for self study. Neither will you be able to view the corrected answer sheets after any examination. These requirements are derived from stringent EASA and GCAA regulations in order to protect the integrity of the examination process.
- During examinations you will not be able to use any materials outside those which you are given, and these must all be returned at the end of the examination.
- **No calculators are permitted.** (Now is a good time to start practising work without them)

At the time of going to print, the number and type of questions for each module and the time permitted for each examination are determined by Pt 66. However, these are a minima and the AD POLY has derived its own examination process that is approved by EASA / GCAA and is shown at the end of this section. Students are notified of any changes should they occur, and students should note that changes will be adopted.

EASA / GCAA Course Re-assessment Policy

Students who are unsuccessful at any EASA / GCAA MCQ or Essay assessment in one calendar year, will be afforded a **maximum of two re-assessments** in each module. Re-assessment in a module can take place no sooner than:

- 30 days **after the last attempt** providing the student is retrained in particular areas of weakness. Attendance at any retraining is mandatory and should the student not achieve 90% of the retraining offered then he/she will be considered to have not been retrained.
- 90 days **after the last attempt** if the student has not been retrained or failed to meet 90% attendance at any retraining offered.
- 12 months after the third attempt at a module examination.

Complete re-assessment of practical tasks (similar to examination) is, in many ways, impractical. To this end any re-assessment will be focused on the student's specific area(s) of failure. All EASA / GCAA re-assessment grades will, with the exception of 'Practical Assessment', be recorded as scored. Any re-assessment during Practical will attract a 'Bare Pass' - 75% mark.

EASA / GCAA Certification Requirements

EASA / GCAA permit the issue of two types of certificate; 'Examinations Only' and 'Full Training Certificate'. The former is awarded at the end of the approved EASA / GCAA course where a student has not achieved 95% overall attendance over the whole training program or has not successfully completed all approved examinations.

The 'Full Training Certificate' is awarded to students who: passed all modules of training with a minimum of 75% mark, demonstrated at least 95% overall attendance in the program, and have successfully completed all approved modules with a requisite minimum of 90% attendance in each module.

Table of Required EASA Examination type and time allowed

EASA Module 1- Mathematics: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

EASA Module 2- Physics: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

EASA Module 3- Electrical Fundamentals: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

EASA Module 4- Electronic Fundamentals: B1.1 - 20 multi-choice and 0 essay questions. Time allowed 25 minutes. B2 – 40 multi-choice and 0 essay questions. Time allowed 50 minutes

EASA Module 5- Digital Techniques /Electronic Instrument Systems: B1.1 - 40 multi-choice and 0 essay questions. Time allowed 50 minutes. B2 - 72 multi-choice and 0 essay questions. Time allowed 90 minutes

EASA Module 6- Materials and Hardware: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

EASA Module 7- Maintenance Practices: B1.1 - 80 multi-choice and 2 essay questions. Time allowed 100 minutes plus 40 minutes for essays. B2 - 60 multi-choice and 2 essay questions. Time allowed 75 minutes plus 40 minutes essays.

EASA Module 8- Basic Aerodynamics: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

EASA Module 9- Human factors: 20 multi-choice and 1 essay questions. Time allowed 25 minutes plus 20 minutes for essay.

EASA Module 10- Aviation Legislation: 40 multi-choice and 1 essay questions. Time allowed 50 minutes plus 20 minutes for essay.

EASA Module 11- Aeroplane Aerodynamics, Structures and Systems: 132 multi-choice and 0 essay questions. Time allowed 165 minutes.

EASA Module 13- Aeroplane Aerodynamics, Structures and Systems: 132 multi-choice and 0 essay questions. Time allowed 165 minutes.

EASA Module 14- Turbine Engines: 28 multi-choice and 0 essay questions. Time allowed 35 minutes.

EASA Module 15- Gas Turbine Engine: 92 multi-choice and 0 essay questions. Time allowed 115 minutes.

EASA Module 17- Propeller: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.
Passing grade in all modules and including essay is 75%.

Submission of Assessment Items – Extensions and Penalties

Students are required to submit assessment items by the due date, as advised in the course syllabus. Assessment items submitted after the due date will be subject to a penalty unless an extension of time for submitting the item is approved by the course instructor.

Requests for Extension

Requests for extension of time to submit an assessment item must be made in writing to the course instructor. Where the request is made on medical grounds, an appropriate medical certificate must be submitted.

The request for an extension should be lodged by the due date for the assessment item. A copy of the extension request should be attached to the assessment item when it is submitted.

Penalties for Late Submission

An assessment item submitted after the due date, without an approved extension, will be penalized. The standard penalty is the reduction of the mark allocated to the assessment item by 10% of the maximum mark applicable for the assessment item, for each day or part day that the item is late. Weekends count as one day in determining the penalty. Assessment items submitted more than five days after the due date are awarded zero marks.

The course instructor may vary provisions provided that any penalties to be imposed for late submission are approved by the Academic Affairs Committee in the context of approving the course syllabus and are

conveyed to the student as part of the course syllabus.

Deferred Assessment

Students may apply for deferred assessment if they were prevented from performing an assessment item, such as an examination, paper, presentation, or other assessment activity scheduled for a particular date. The following would generally be considered acceptable grounds to approve a deferred assessment:

- On the grounds of illness
- Accident
- Temporary disability
- Bereavement
- Sporting or cultural commitment at state, national or international representative level

Students applying for a deferred examination for this reason may also apply for an alternate sitting or other compassionate circumstances (for example, death of a family member or close relative, serious illness of a family member or close relative, involvement in an accident where this does not involve injury, significant and unexpected employment problems or pressures, significant relationship problems).

Approval to sit a deferred examination will not be granted where students could reasonably have been expected to avoid the circumstances of missing or performing poorly in an examination. The following would generally be considered unacceptable grounds to approve a deferred examination:

- Misreading an examination timetable
- Submitting applications after the three-day deadline
- Planning holiday arrangements, including for international travel (Booking a plane ticket prior to the end of quarter examination period is not considered an adequate reason for a deferred examination.)
- Attending sporting or cultural commitments, other than at state, national, or international representative level

Applications may be rejected if there is reason to believe that a student is seeking to achieve an unfair advantage through deferred assessment. This judgment may be based on the particular circumstances of the application together with the student's academic record and history of deferred examination applications.

Requests for deferred assessment must be made on the form provided for this purpose and accompanied by appropriate documentary evidence. Requests for deferred assessment for an examination or other assessment items must be lodged with the instructor no later than three working days after the date of the examination or other pertinent date.

An application for deferred assessment shall be considered by the course instructor who approves or rejects the application. The course instructor notifies the chair of the Academic Affairs Committee of the outcome of the deferred assessment application.

Where the course instructor grants a student deferred assessment, this normally takes the form of a replacement assessment item or examination, in which case, the replacement assessment item should resemble as closely as possible the original assessment item or examination and should carry the same percentage of total weighting for the course.

In exceptional cases, the Academic Affairs Committee may respond to an application for deferred assessment by giving special consideration through one or more of the actions previously described.

A student who is granted deferred assessment in a course is eligible for the full range of grades available for that course.

Students applying for deferred assessment or special consideration on medical grounds must submit a medical certificate, completed by a registered medical or dental practitioner stating:

- The date on which the practitioner examined the student

- The severity and duration of the complaint
- The practitioner's opinion of the effect of the complaint on the student's ability to undertake the assessment item

A statement that the student was "not fit for duty" or was suffering from "a medical condition" will not be accepted unless the information required above is included.

Students applying for special consideration, extension or deferred assessment on other grounds must submit suitable documentary evidence, such as a bereavement notice, letter from employer, practitioner or professional, statutory declaration, or copy of accident report.

Students who feel that their case for special consideration, extension or deferred assessment has been wrongly dismissed by the course instructor or course leader, may appeal in writing against that decision to the Chief Academic Officer. The decision of the Chief Academic Officer is final.

Appeals against Award of Grade

Students are encouraged to discuss with teaching staff their performance in assessment items during a course. Where a student believes that an error has been made or an injustice done with respect to the grade awarded for a course, the student may request a review of the grade. This request must:

- Be made in writing on the appropriate form
- State the grounds for the review request
- Be lodged with the Chair of the Academic Affairs Committee within 14 days of the date on which student grades are posted by AD Poly.

All requests for review of grade shall be dealt with by the course instructor. Students will be notified of the outcome of the requested review of grade by the course instructor who will forward the recommendation back to the Academic Affairs Committee. The Grade Appeal Form for the course instructors can be obtained from their offices.

A student who is dissatisfied with the outcome of the review of grade may lodge a formal appeal to the AD Poly Appeals Committee (refer to Policy on Student Grievances and Appeals).

Disposal of Assessment Material

Course instructors are required to retain all uncollected assignments, portfolios, and other assessment materials that are not included in the course files for a minimum of two years from the date of issue of results. At the completion of the two-year period, course instructors may destroy all assessment material that are not included in the course files except that material that relates to appeals that have not yet been finally determined.

Responsibility of Course Instructors

Course instructors are responsible for conveying to students clear advice about the aims and objectives of the course, the assessment requirements, the relationship between the assessment methods and the expected learning outcomes, the criteria against which individual assessment items are judged and their relative weight.

Course instructors are required to provide feedback to students on their performance in assessment items conducted during the quarter. They should give guidance to students and comment on work presented for assessment during the quarter by written comments or other suitable means. Instructors should be prepared to discuss with students their performance in an examination.

Responsibility of the Academic Affairs Committee

The Academic Affairs Committee is responsible for implementing curricular policies of Abu Dhabi Polytechnic. This includes responsibility for dealing with individual student cases, monitoring results, and providing advice on student achievement.

The Academic Affairs Committee is responsible for determining final grades through scrutinizing grade recommendations from course instructors to ensure comparability of standards and consistency with AD Poly policy; and, consulting relevant course instructors regarding any queries concerning their recommended grades.

The Academic Affairs Committee is also responsible for:

- Determining the classification to be awarded to students who have satisfied the requirements for diploma within the AD Poly
- Approving the award of supplementary assessment
- Determining the outcome of applications from students for special consideration and deferred assessment
- Dealing with allegations of cheating and plagiarism as provided for in the policy on academic misconduct
- Recommending to the Awards Committee candidates for any academic prizes

The Academic Affairs Committee and the Assessment Committee are responsible for:

- Monitoring the outcome of assessment processes, identifying courses in which the outcomes are unsatisfactory, and providing advice to the instructors on actions to improve assessment outcomes.
- Providing advice to the Senior Management Committee on the basis of assessment performance indicators about the need to review program structure and contributions of courses to a program.
- Providing advice to the division heads or course leaders in relation to the review of student progress within programs or courses.

The Academic Affairs Committee may modify the grades recommended by the course instructor. Where such modification is made on the basis of academic judgment, the course instructor will be consulted.

The functions of the Academic Affairs Committee may be carried out executively by the chair.

The chair of the Academic Affairs Committee is responsible for determining appeals from students against decisions in response to applications for special consideration and deferred assessment.

Supplementary Assessment

The AD Poly Academic Affairs Committee may, at its discretion, grant supplementary assessment to any student with a grade of Fail whose overall performance in the course justifies it. The purpose of supplementary assessment is to provide the students with additional time for private study followed by the opportunity to demonstrate that the criteria for passing the course have been met.

The AD Poly Academic Affairs Committee may, at its discretion, grant supplementary assessment where the student has failed the last course required to complete the requirements of the degree. To be offered a supplementary assessment under this provision, the student must have attempted all assessment items and attended any examination associated with the course and must apply to the Chair of the AD Poly Academic Affairs Committee for the supplementary assessment within two weeks of the release of examination results.

A student will not be awarded a grade higher than "P" meaning "pass" for a course in which supplementary assessment is granted. A P grade replaces the F grade but does not count towards the calculation of the grade point average.

A student is allowed only one attempt at each supplementary assessment item. As a general rule, supplementary examinations are held in the designated supplementary examination periods as advised on

AD Poly's academic calendar. Students who feel that their case for Special Consideration, Extension, or Deferred Assessment has been wrongly dismissed by the course instructor may appeal in writing against that decision to the AD Poly Director or chair of the Academic Affairs Committee. The decision of the AD Poly Director is final.

Missing an Examination

Students who miss an exam and present a legitimate reason shall be given an "incomplete" grade. Such students must apply for a deferred exam stating the reason with evidence for missing the exam. The application is reviewed by the Division Head and recommendation forwarded to the AD Poly Director. If a deferred exam is announced, students shall be requested to take the make-up exam in the supplementary deferred period as announced in the academic calendar or agreed upon with the course instructor. Students who miss an exam and do not present a legitimate reason can be given a score of "zero" for the exam.

Grading and Results

During the quarter, course instructors communicate their evaluations of individual assessment items to students with reference to the criteria against which performance has been assessed. A grade is awarded by the course instructor that signifies the student's overall performance in the course. Students' results in courses are recorded using the grades shown in Table 1. The description that accompanies each grade is given as a guideline to assist comparability across AD Poly, but these descriptions must be interpreted within the context of each course.

| Grade | Value |
|-----------------|---------------|
| A or A+ | 4 |
| A- | 3.7 |
| B+ | 3.3 |
| B | 3 |
| B- | 2.7 |
| C+ | 2.3 |
| C | 2 |
| C- | 1.7 |
| D+ | 1.3 |
| D | 1 |
| F | 0 |
| P (pass) | Non-impacting |
| I (incomplete) | Non-impacting |
| \W (withdrawal) | Non-impacting |

Table 1. Letter grades and their value in the calculation of grade point average (GPA). The cumulative grade point average (cGPA) is calculated by adding the numerical value of each course grade multiplied by its credit hours for accumulated quarters and dividing the total over the total credit hours for all quarters. Courses in which a grade of P, I, or W are recorded, do not impact the cumulative GPA, i.e., these courses are not included in the calculation of the cumulative GPA.

Failed Courses and Remedial Action

Due to the prescribed nature of the AD Poly program curricula and the critical nature of their occupation, students cannot graduate if they have failed a course. Students who have failed a course need to take immediate remedial action to pass the course or they may be expelled from AD Poly. Remedial action can be accomplished by taking supplementary lessons and arrange with their course instructor for reassessment no later than by the end of the following quarter, such as taking examinations, or submitting homework or special projects. In such cases, once the student has satisfied at least the minimum requirements for passing the failed course, a grade of D replaces the F. Note, a D grade counts towards the calculation of the cumulative grade point average.

In cases where students fully repeat a course in which they failed, the new grade will be recorded and will count towards the cGPA. The previous F grade will thereafter no longer be included in the calculation of cGPA.

5. Policy on Academic Misconduct

Introduction

Students must conduct their studies at Abu Dhabi Polytechnic honestly, ethically, and in accordance with accepted standards of academic conduct. Any form of academic conduct which is contrary to these standards is academic misconduct, for which AD Poly may penalize a student.

Specifically it is academic misconduct for a student to:

- Present copied, falsified, or improperly obtained data as if it were the result of laboratory work, field trips, or other investigatory work
- Include in the student's individual work material which is the result of significant assistance from another person if that assistance was unacceptable according to the instructions or guidelines for that work
- Assist another student in the presentation of that student's individual work in a way that is unacceptable according to the instructions or guidelines for that work
- Cheat
- Plagiarize (knowingly presenting the work or property of another person as if it were one's own)

Plagiarism is defined as the act of deliberately presenting another person's work as your own without acknowledgement. A student should therefore ensure that they acknowledge and appropriately reference all sources of information presented in their homework, presentations, or projects. Students are expected to ask their teachers if there are any questions regarding what is or is not considered plagiarism.

Plagiarism is easily detected by electronic plagiarism detection tools. Experienced teachers are ever vigilant to this activity. Both cheating and plagiarism can occur in a number of situations:

- In a homework assignment
- As part of an individual or group project assignment, students are to report instances in group work by others
- In an informal assessment activity
- In a formal testing situation
- Using others' words taken from text-based or internet sources.

The consequence of cheating or plagiarizing can result in dismissal from AD Poly.

Examples of Plagiarism include:

- Word for word copying of sentences or paragraphs from one or more sources which are the work or data of other persons (including books, articles, thesis, unpublished works, working papers, seminar and conference papers, internal reports, lecture notes or tapes) without clearly identifying their origin by appropriate referencing.
- Closely paraphrasing sentences or paragraphs from one or more sources without appropriate acknowledgment in the form of a reference to the original work or works.
- Using another person's ideas, work or research data without appropriate acknowledgment.
- Submitting work which has been produced by someone else on the student's behalf as if it were the work of the student.
- Copying computer files in whole or in part without indicating their origin.
- Submitting work which has been wholly or partially derived from another student's work by a process of mechanical transformation. For example, changing variable names in computer programs.

Program administrators and course instructors are to provide students with advice concerning accepted standards of academic conduct in the area of the program or course. They are to give particular attention to conventions on referencing and bibliography; and, the contribution of other students to assessment items which are meant to be the work of an individual student.

Penalties

On determination that academic misconduct has taken place, the penalty which may be imposed on the student is one or more of the following:

- A reduced or nil result for the assessment item affected by the academic misconduct
- A fail grade for the course in which academic misconduct occurred
- Exclusion from the program; readmission to the program is at the discretion of the Head of the Division based on consideration of the student's case for readmission.

Where a student has been found guilty of academic misconduct on more than one occasion and has previously been penalized as set out above, the penalty shall normally be exclusion from the program or expulsion from AD Poly, unless in the opinion of the relevant Academic Review Board there are mitigating circumstances.

Procedures

Making a Complaint of Academic Misconduct

An academic staff member who has reason to believe that a student has committed some form of academic misconduct (this includes receiving a report on student misconduct from a laboratory or teaching assistant and/or an examination invigilator) may take one of the following courses of action:

1. Request the student to attend an interview with the academic staff member to discuss the alleged misconduct. On the basis of the interview, the academic staff member may decide to:
 - Take no further action; or
 - Provide the student with a warning together with advice about what is acceptable academic conduct; or
 - Make a formal complaint of academic misconduct to the Chair of the Academic Affairs Committee by setting out in writing the nature of the alleged misconduct and the evidence in support of the charge.
2. Without an interview, make a formal complaint of academic misconduct to the Chair of the Academic Affairs Committee by setting out in writing the nature of the alleged misconduct and the evidence in support of the charge.

Dealing with a Complaint of Academic Misconduct

On receiving a complaint of academic misconduct against a student, the Chair of the Academic Affairs Committee may seek evidence concerning the matter from other sources. The Chair of the Academic Affairs Committee shall advise the student of the complaint, including a description of the grounds for the complaint and a copy of all the evidence relevant to the matter. Additionally, the Chair of the Academic Affairs Committee may delegate the matter to the student's Division Head.

Before determining the action to be taken concerning a complaint of academic misconduct, the Chair of the Academic Affairs Committee must provide the student with the opportunity to respond to the complaint of academic misconduct. The response must be in writing and must be received within fourteen days of the receipt of notification of the complaint.

Having considered the complaint of academic misconduct in the light of the evidence and the student's response, the Chair of the Academic Affairs Committee may take one of the following actions:

- Dismiss the complaint of academic misconduct. In this case no documentation concerning the complaint shall be placed on file.
- Provide the student with a warning together with advice about what is acceptable academic conduct.
- Where satisfied that academic misconduct has occurred, the Chair of the Academic Affairs Committee may impose a penalty as set out in the Penalties section.
- Where further investigation is needed to establish the facts of the case, the Chair may refer the matter to a meeting of the relevant Academic Review Board for a formal hearing.

In each case, the student shall be informed in writing of the decision of the Chair of the Academic Affairs Committee, including the reasons for the decision.

Dealing with Additional Complaints of Academic Misconduct

During the course of consideration of a complaint of academic misconduct, if an additional complaint of academic misconduct is received, that complaint shall be dealt with fully in terms of the preceding section.

Formal Hearing Concerning Alleged Academic Misconduct

The relevant Academic Review Board (hereafter referred to as the Board) may conduct a formal hearing into an allegation of academic misconduct. The student may attend the hearing or, if the student requests, participate in the hearing through telephone conferencing or similar facility.

If the student declines to attend the hearing (or participate by other means) the hearing shall proceed in the absence of the student.

The student may make a written submission to the hearing.

The student may be accompanied at the hearing by a companion who is a member of AD Poly. The companion is present as a support to the student and is not an advocate or spokesperson for the student. In exceptional cases, for example a student with a disability which affects communication, the Chair may give permission for the companion to speak on behalf of the student.

Neither the student nor any other person participating in the hearing is entitled to be legally represented.

Prior to the hearing, the Board shall provide the student with a copy of (or access to) all written materials and other evidence available to the Board.

The Board may call witnesses to give evidence at a hearing or may receive written statements of evidence. If the Board thinks it appropriate or if the student requests it, the Board may require persons to attend the hearing and answer questions. The student may ask questions of any witnesses in attendance at the hearing.

The student may make submissions to the Board after the evidence of all witnesses has been given. The student's submissions may be oral or in writing.

As an outcome of the hearing, the Board may take one of the following actions:

- Dismiss the complaint of academic misconduct
- Provide the student with a warning together with advice about what is acceptable academic conduct
- Decide that the student is guilty of academic misconduct and impose a penalty as set out in the Penalties section

The student shall be informed in writing of the decision of the Board, including the reasons for the decision.

Recording of Penalty

Where a penalty of exclusion is applied, the Chair of the Academic Affairs Committee shall advise the Registrar for the purpose of recording the decision on the student's academic record. The academic record will bear the annotation "excluded on (date) for disciplinary reasons."

Appeal

Where any penalty for academic misconduct is imposed as provided for in Penalties section, a student may

appeal to the Senior Management Committee (or an Appeals Committee convened by the Senior Management Committee) under the provisions of the “Policy on Student Grievances and Appeals.”

The student shall be informed of the right of appeal in the correspondence advising of the imposition of a penalty.

Respect for Policies Relating to the Use of Information Technology

All computers on the AD Poly campus are the sole property of the IAT- AD Poly and therefore, can be monitored by staff. Use of IT facility and equipment by students is a privilege and not a right. The use of the internet is for academic purposes only and students are to adhere to accepted standards of ethics and behaviour. The use of IAT's information technology resources to receive or distribute improper or immoral materials is strictly prohibited. Students in violation of such policies will be subject to disciplinary action with penalties ranging from suspension of computer and network privileges, to suspension or dismissal from the AD Poly.

Attendance and Punctuality

AD Poly expects students to take full responsibility for their academic work and progress. Success at AD Poly depends largely on regular class attendance. Absence from instruction/lessons has been shown to be a contributing factor to failure or low academic achievement. Punctuality is mandated by employers, and as employees of IAT or one of its sponsors, it is expected that students adhere to strict attendance policy. Students experiencing personal difficulties and contributing to poor attendance or punctuality should seek AD Poly counselling support. Attendance is calculated on a per-course, per-module, and an overall course basis.

Students with excessive absence are excluded from formal assessment (final examinations). This exclusion results in failure of the unit assessed. Excessive absence is defined as unexcused absence that is greater than 10% of the total number of meetings of the course or module. The table below shows three different absence stages and the consequences of reaching each of them.

Academic Programs

| Percent | Warning level | Remarks |
|---------|---------------------------|--|
| 0%-5% | Written warning | Attendance Notified to Sponsor and Monitored on Daily/Weekly basis |
| 5%-10% | Final written warning | Sponsor Notified for every 1% increase in absence. Possible exclusion from assessment when 10% is reached |
| ≥ 10% | Exclusion from assessment | Sponsor Notified of every unapproved absence up to limit of 15%. Exclusion from assessment and possible dismissal. |

Students enrolled in and EASA approved courses should note that minimum attendance requirements are strictly monitored and subject to Audit by EASA. Students on any approved EASA course must demonstrate 95% attendance over the period of the whole course to receive full EASA recognition. Individual modules require a minimum of 90% attendance. Modules are EASA based and are of varying lengths, depending on complexity and content. Each day consists of a maximum of 7 learning periods totalling 35 periods per week. One period is 50 minutes.

EASA Approved Programmes

| Percent | Effect |
|---------------------------------|--|
| ≥ 5% of overall Approved Course | Student will be issued with an EASA 'Examinations Only' Certificate. Pt 66 Maintenance Experience requirements becomes 5 years instead of 2 years |
| ≥ 10% of Module | Student will be issued with an EASA 'Examinations Only' Certificate. Pt 66 |

| | |
|--|---|
| | Maintenance Experience requirements becomes 5 years instead of 2 years |
|--|---|

Absences within the above reflected percentages must be covered under mitigating circumstances. Some examples of acceptable mitigating circumstances are shown below. For absence to be excused on medical grounds, the student must produce a certified medical certificate **on return** to instruction/lessons.

Other reasons for absence must be approved immediately on return to the Institute. Examples of reasons would include:

- *Death of a immediate family member (mother, father, brother, sister, son, daughter or grandparents)*
- *Overseas flight cancellation (out of the students control)*
- *Immediate family getting married*
- *Other reasons at the Academy Director's discretion. The Academy Director reserves the right to require documentation upon request*

Students should be aware that examples of absence that are not acceptable are:

- *Late night socialising*
- *Headache/ Slight cold / cough*
- *Speeding / stopped by Police / attendance at Court*
- *Examination nerves/stress*
- *Not enough time to study*
- *Loss of training notes*
- *Loss of electronic data (PC or flash drive failure)*
- *Attendance at a non-First Degree family members wedding / party etc*
- *Visit to Bank / Insurance Broker etc*

Students should not arrange medical / banking or other similar appointments during training time. Every effort should be made to arrange such appointments at the end of the day so as to avoid disruption to training. Students who cannot arrange appointments outside of the training day should consult with the training manager. Repeated appointments within the training day will have to be justified by the student concerned, may be investigated and may not be accepted in mitigation.

Lateness for Class

Students who arrive late for class cause considerable disruption to the learning of other students. Student that are late more than five minutes will be recorded as absent.

Lateness for an Assessment

Students are expected to be on time for all types of assessments. Student will be refused entry to the examination room and receive a mark of zero when they are reporting late for an examination. Students enrolled on EASA or GCAA approved modules will not be permitted entry to the exam room once the exam has commenced.

6. Policy on the Submission of Coursework

Definition of “Coursework”

“Coursework” shall be defined as:

“any work, in any medium, which is not undertaken in an examination room under supervision, but which is submitted by a student for formal assessment during their program of study.”

Examples of coursework include, but are not limited to, reports (formal and informal), case studies, presentations, group work, interviews, in-class tests or quizzes, and role play.

Quizzes formally fall within the definition of coursework, but are governed by separate regulations.

Authorship and the Use of Previously Submitted Material

Regulations to be Followed by Students

Students must cite sources to indicate material that is not their own work. All written coursework must be written by the students themselves and in their own words, except for quotations from published and unpublished sources which shall be clearly indicated and acknowledged as such. Similarly, any non-written coursework must be entirely the student’s own work.

Avoidance of Plagiarism

No student shall submit plagiarized work, defined by AD POLY as:

- the use, intentional or otherwise, of material whose source is not acknowledged; or
- the direct use of material, referenced or unreferenced, without a clear indication that the material is taken verbatim from its source.

Avoidance of Collusion

No student shall submit work based upon collusion, defined by AD POLY as the use by one student, intentional

or otherwise, of material produced by one or more other students, without specifying the authorship of that material.

The Normal Avoidance of Material that has been Previously Submitted

A student shall not be permitted to incorporate material that has been submitted by the student or any other person in support of a successful application for a qualification of this or any other education establishment or any other qualification-awarding body, except for the purpose of drawing attention, for reference purposes only, to such material, including calculations or the results of experimental work. Where such material is incorporated, the fact shall be recorded together with the title of the thesis or other work, the date of the award of the qualification and the name of the institution or other qualification awarding body making the award.

Guidance to be Provided by Departments

All Sections are expected to provide guidance to students specifying, in the context of their subjects, that:

- quotations from published and unpublished sources must be indicated and acknowledged clearly;
- web-based materials must not be directly downloaded into an assignment and must be referenced fully like any other source material;
- students must not incorporate materials/assignments purchased or acquired from internet sites or commissioned from sources which write assignments for payment (paper-mill sites);
- paraphrasing of material from others must be referenced clearly;
- students should not normally incorporate materials previously submitted at this or any other institution towards the completion of an award, and any such inclusion must have been approved by a member of academic staff, and be referenced fully;
- sources of illustrations, photographs maps and statistics must be acknowledged clearly;
- (unless students have been instructed to produce a group assignment), students must produce work

which is uniquely their own;

- where work is done as part of a group, the submission sheet must include a list of all students who have contributed to this work;
- reference to appropriate sources of information on plagiarism and good practice in the production of assignments.

Submission Dates and Extensions

Publication of Submission Dates

All course instructors should clearly publish the submission dates for all coursework assignments; and, the procedures by which coursework must be submitted.

The submission dates and procedures should normally be published no later than the first teaching week for the course.

Granting of Extensions

The granting of extensions is at the discretion of the relevant instructor.

Any student who believes that they have genuine grounds for submitting coursework later than the published submission date should, before the published submission date, seek an extension from the course instructor.

Where a student does not seek an extension until on or after the published submission date, the request will only be granted by the course instructor, in addition to there being genuine grounds for submitting the work after the published deadline, there are also genuine grounds to explain the student's failure to seek an extension earlier.

Extended submission deadlines should normally allow for work to be marked before the deadline for the submission of grades.

All instructors should establish a formal mechanism for recording extensions granted, so that an agreed record exists, and should operate a formal process for recording receipt of coursework.

The instructors should make it clear to students that if they are in genuine difficulties they should discuss an extension if appropriate.

Conduct of In-Class Tests

Status

In-class tests are formally regarded as coursework assessments, and are administered by teaching staff.

Extensions

Students who are unable to complete an in-class test at the scheduled time shall be entitled to seek an extension in accordance with the Policy on Special Assessment Arrangements. In exercising their discretion about whether to grant a request, the course instructor shall be entitled to take into account the practicability of arranging a further sitting of a suitable in-class test before the meeting of the relevant examining body. If setting an alternative class test is not practicable, students may be given an alternative type of assessment to undertake by the extended deadline.

Special Arrangements for Students with a Disability, Illness, Injury or Adverse Personal Circumstances

Where it has been agreed that a student is entitled to special arrangements for formal examinations, it shall be assumed that, unless the student is informed in writing to the contrary, such arrangements also apply to In-Class Tests.

7. Policy on the Conduct of Exams

General Regulations

Arrivals and Departures

Arrivals

No student shall be permitted to enter the examination room after the lapse of 10 minutes (20 minutes for Final Exams) from the start of the examination.

No additional time will be allowed to students who arrive at the examination room after the start of the examination. There will be no late entry for GCAA/EASA exams. All GCAA/EASA and other standardized exams require adherence to strict prompt attendance of scheduled exams.

Departures

No student shall be permitted to leave the examination room either in the first 30 minutes from the start of the examination or in the last 15 minutes of the examination.

Students who complete their work during the last fifteen minutes shall remain quietly seated until the proctor announces the end of the examination.

Irrespective of their departure time, students must not (a) leave the examination room until all their written work has been handed in or (b) remove from the examination room any answer books whether used or unused, mathematical tables or other data provided for use or other items of examination stationery except for non-returnable question papers.

Cheating and Other Examples of Academic Misconduct during an Exam

Unless otherwise indicated by the Course Instructor or Invigilators, students are forbidden to:

- Take to their desk in the examination room neither any unauthorized book, manuscript, papers or other articles nor any case, bag or other container in which books, manuscripts, papers or other unauthorized articles can be carried
- Make use of any of the types of material referred to above that were introduced into the examination room by another student
- Obtain, or endeavor to obtain, directly or indirectly, assistance in their work
- Give or endeavor to give, directly or indirectly, assistance to any other student
- Impersonate an examination student
- Allow themselves to be impersonated
- Write notes or rough work on any paper other than the answer books or question papers provided

Where an invigilator suspects a student of academic misconduct, the following procedure shall be followed:

- (a) The senior invigilator shall be informed. If the senior invigilator shares the suspicion, they shall remove and retain any unauthorized material; and, report the matter to the course instructor, who shall have power either to exclude the student from the examination room or permit the student to finish the paper.
- (b) The student shall be informed before they leave the room that they are not required to admit to a breach of the regulations but they may submit a written statement if they so wish, to be forwarded to the Academic Affairs Committee.
- (c) At the conclusion of the examination, the invigilator shall prepare a joint report of all the circumstances, and forward this report to the course instructor. Based on the report, the relevant academic office shall be responsible for determining the consequences for the student of the regulatory breach. The consequences shall be within the following guidelines:

- For an initial offense, the maximum penalty shall be that the student is awarded a Fail grade, without the right to reassessment, for the module or subject overall, but retains the right to redeem credits by retaking the module subject to the constraint that the overall mark for the retaken module/subject would be capped at Pass.
- For a second or subsequent offence, the maximum penalty shall be that the student's studies are terminated, and the student is required to leave AD Poly.

In the event that an instructor, when marking examination scripts, suspects a student of academic misconduct, they shall consult the invigilators or other instructors. If the course instructor considers that such a breach has occurred, they shall make a full report to the administration and shall warn the student that this report is being made. The course instructor shall inform the student that they are not required to admit a breach of the regulations but they may submit a written statement if they so wish, to be forwarded to the Academic Affairs Committee.

Disruptive Behavior

Students are forbidden to:

- Communicate with each other in the examination room
 - Address enquiries to anyone other than an invigilator
 - Smoke or consume alcohol in the examination room
 - Leave mobile telephones switched on in the examination room
 - Place mobile telephones on their desks
 - Indulge in any behavior which, in the opinion of the invigilator, may disturb other students
 - Indulge in any other form of conduct which may disrupt the smooth progress of an examination
- (a) Where an invigilator suspects a student of breaching these regulations the following procedure will be applied:
- The invigilator will normally order the student to discontinue the forbidden behavior. If the student does so, no further action will be taken. If, however, the student, in the same examination, subsequently engages in any of the behaviors listed above. The senior invigilator will order the student to leave the room.
 - When the student has left the room, they will be informed by the senior invigilator that a full report will be made to the course instructor.
 - The senior invigilator will inform the student that they may submit a written statement if they so wish, to be forwarded to Academic Affairs Committee.
 - At the conclusion of the examination, the invigilator will prepare a joint report of all the circumstances, and forward this report to the course instructor, who will treat the matter according to the Policy on Student Discipline.
- (b) Notwithstanding clause (a) above, the senior invigilator is empowered to judge that the behavior is sufficiently disruptive to warrant the immediate removal of the student from the examination room. In these circumstances, when the student has left the room, they will be informed by the senior invigilator that a full report will be made to the Academic Affairs Committee.
- The senior invigilator will inform the student that they may submit a written statement if they so wish, to be forwarded to the course instructor.
 - At the conclusion of the examination, the invigilators shall prepare a joint report of all the circumstances, and forward this report to the Student Affairs Committee, who will treat the matter according to the Policy on Student Discipline.

Illness during an Examination

Inability to Complete an Examination

In cases where a student complains of feeling unwell in a scheduled room, leaves the examination, and is unable to return to complete the examination, they will be required to submit a medical certificate to the instructor, normally within three working days.

The invigilator should record the circumstances surrounding the student's withdrawal from the

examination on the front cover of the examination book, and the internal examiner responsible for marking the script shall inform the course instructor.

The course instructor shall be entitled to determine either that the student should be treated in the same way as a student who was absent from the examination, or that the student should be awarded a mark based on the work that had been completed.

Open Book Examinations

For all “Open Book” examinations, the relevant Head of Programme or representative shall ensure that the students are informed, in writing, of the following:

- The title of the “Open Book” examination paper
- The precise nature of the material which can be taken into the examination
- That the material is for the students’ personal use
- That, apart from the students being allowed the use of certain specified material, the examination will be conducted in all other respects in accordance with the normal rules governing the conduct of examinations

Use of Electronic Calculators in Examinations

Students are permitted to use their own “pocket size” electronic calculators, provided that they are silent in operation, and unless expressly disallowed from using them for specific examinations. AD Poly shall not be responsible for the provision of (i) calculators in the event of a breakdown, (ii) power for their operation, or (iii) spare batteries. Approved calculators for use in Aviation programmes are: Casio models **FX83, FX85** Series (with any suffix), **FX115 MS, FX570 ES** and the **FX 991 ES**. Programmable calculators or smart devices are strictly forbidden from all exam rooms.

The Role of Academic Staff in the Running of Examinations

A member of academic staff (preferably the course instructor) who is knowledgeable about the contents of the examination should arrive in the examination room at least 15 minutes before the scheduled start of the examination and remains for the first 15 minutes to:

- Ensure that the correct examination is being taken, and check the examination for any errors;
- Inform the proctors of any amendments to be made;
- Ensure that, where required, specialized stationery and supporting papers are provided;
- Answer any queries about the question paper, and, before leaving the examination room, inform an invigilator where they may be contacted in the AD Poly for the duration of the examination, in the event of questions from a student on the examination.

It is desirable that the course instructor be able to be contacted by telephone throughout the duration of the examination.

In a team teaching situation where different instructors contribute to assessment in a course, the Course Leader is responsible for ensuring that appropriate moderation processes are in place.

Examinations

Final Examinations

(a) The last or final examination in a course must be given during scheduled final exams week; exceptions must be approved by the HoP of the course. Designated faculty will administer the final examinations according to the schedule for final examinations as printed in the Schedule of Classes publication.

(b) Students with two final examinations scheduled for the same day may request the instructor of the

course to postpone one scheduled examination. Evidence for their request must be verified by the instructor prior to consideration. Faculty will give every consideration to the student's request.

- (c) If a student is absent from a scheduled final examination, the notation "X" is assigned. An advance authorization for deferring the taking of a final examination may be given, but only rarely and for serious reasons (e.g., medical or religious). The student must request the deferral in writing in advance of the final exam date and receive permission from the Head of Department. The Director's office must also be notified.

EASA Courses, Final Examinations will take place within one week of completing the particular module and will encompass all the subjects in the syllabi of the module.

Mid-quarter (Intermediate) Examinations

Mid quarter examinations or intermediate tests are conducted in most courses taken at the Al Ain campus. Absence from mid-quarter or other intermediate examinations may, at the discretion of the instructor, require special resit examinations.

Credits and the Quarter Hour

One credit or quarter hour of credit is defined as one lecture, recitation or class exercise fifty minutes per week for one full quarter. Three weekly hours of laboratory, demonstration, etc., are equivalent to one lecture hour. Each course offered is designated tutorial hours and these hours scheduled during the quarter for students to improve their subject knowledge with the assistance of their teacher. The number in parentheses after a course title listed in the "Course Descriptions" section of this catalog indicates the quarter hours of credit of the course.

Class Ranking

Classified students are ranked on the basis of completed quarter hours accepted for credit. Year one students have 1 to 60 quarter credit hours, Year two 61 to 120 quarter credit hours, and year three 121 to 180 quarter credit hours.

Grade Reports

Midterm Grades

All instructors of courses must submit midterm grades for all students at the prescribed time and based on the work done at that point. Students may also access their midterm grades via AD PolySELF-SERVE Banner. Exceptions are short week's courses that do not issue midterm grades.

Final Grades

Final grades are available for students to access via AD Poly-SELF-SERVE Banner. Students may also request an official copy of their final grades from the office of Student Services. The official copy can be retrieved in person or by mail to the addresses provided by the student.

Grade Point Average (GPA)

The cumulative grade point average (GPA) is determined by dividing the total quality points earned by the total GPA hours attempted. All grades received during a student's enrollment, for which quality points are indicated in the "Grading System" table below, are included in the cumulative GPA. Grades for courses transferred from other institutions are excluded.

Undergraduate Grading System

During the quarter, individual examiners and course instructors communicate their evaluations of individual assessment items to students with reference to the criteria against which performance has

been assessed. A grade is awarded by the examiner or course instructor that signifies the student's overall courses are recorded using the following grades. The description that accompanies each grade is given as a guideline to assist comparability across AD Poly, but these descriptions must be interpreted within the context of each course. The grade point average (GPA) is calculated by adding the numerical value of each course grade multiplied by its credit hours for accumulated quarters and dividing the total over the total credit hours for all quarters. Courses in which a grade of P, I, or W are recorded, do not impact the cumulative GPA, i.e., these courses are not included in the calculation of the cumulative GPA.

The grading system at follows a 0.0 - 4.0 grade point scale. Letter grades are used and each letter weighs on the grade point scale a value as assigned in the table below:

| Grade | Weight | Percentages | Description |
|-------|--------|-------------|---|
| A | 4.0 | 90%-100% | High achievement and intellectual initiative. |
| B+ | 3.5 | 85%-89% | Slightly higher than above average achievement. |
| B | 3.0 | 80%-84% | Above average achievement. |
| C+ | 2.5 | 75%-79% | Slightly higher than average achievement. |
| C | 2.0 | 70%-74% | Average achievement. |
| D+ | 1.5 | 65%-69% | Below Average achievement. |
| D | 1.0 | 60%-64% | Inferior but passing achievement. |
| F | 0.0 | 0%-59% | Failure |
| AF | 0.0 | | Failure due to unauthorized withdrawal or excessive absence. |
| I* | - | | Course work incomplete at last session due to extraordinary circumstances. Must be removed within one year after course is taken or "I" is converted to "F." For graduating classmen, this conversion will take place 30 calendar days after the commencement date. |
| P* | - | | Pass. Credit is given toward graduation but has no effect on grade point average. Equivalent to "C" or better. |
| NP* | - | | No Pass. No credit toward graduation. Equivalent to "F." |
| AW* | - | | Authorized withdrawal. |
| WF | - | | Withdrawal from class with failing averaged assessments. |
| T* | - | | Transfer Credit awarded. |
| X* | - | | Failure to take the final examination in a course. Must be cleared within 30 days of the end of the quarter or session or a grade of "F" is recorded. |

* Grade has no effect on the cumulative grade point average calculations.

8. Academic Standing, Progression, and Exclusion

Introduction

This policy applies to all students undertaking diploma studies. The policy comes into effect once a student has undertaken at least two quarters of study.

In order to be deemed to be in good academic standing, a student undertaking diploma studies must achieve a grade of at least a D (60%) in all classes taken and an overall average of a C (cGPA of 2.0) across all study in all quarters. There are four progressive levels of academic status:

Good Standing

Students are in Good Standing at the academy unless placed on Academic Warning, Academic Probation or Academic Suspension.

Academic Standing of Probation

A student whose cumulative grade point average (cGPA) falls below 2.0 is placed on academic probation for the following quarter.

A student who is placed on probation is advised to seek assistance in order to improve their academic performance. Sources of assistance include AD Poly's Learning Resource Center staff, the Counseling Service, Student Support Services, the Tutoring Center, and the academic staff responsible for the program and courses that the student is undertaking.

Academic Standing of Excluded

A student is eligible for exclusion if the student has been on academic probation for more than two consecutive quarters with a GPA < 2.00. If a student maintains a GPA > 2.00 then the student can have an extension for a further quarter. Also, if the GPA is improving and the student is of good standing then the student can have an extension for a further quarter.

Notwithstanding the above provisions, if the student has passed all courses in the most recent quarter, the student will not be excluded but will be placed on a further period of probation.

A student may be eligible for exclusion on the basis of failure in one or more designated courses. The designated courses are required to be specified in the program requirements and advised to students.

At the end of each quarter, the Student Services Office will review all students who are eligible for exclusion. A student's Division Head may recommend to the Chief Academic Officer that a student eligible for exclusion should not be excluded where the head is of the view that exceptional or compassionate circumstances have been the cause of the student's poor academic performance.

The Chief Academic Officer shall determine all students who are to be excluded from further study on the aforementioned basis and taking into account the recommendations of an Academic Review Board established by the Academic Affairs Committee. Where a student is eligible for exclusion, but is permitted to continue study, the student has an academic status of probation for the following quarter and may be required to undertake a specified program of study.

A student who is excluded is not permitted to attend classes or undertake study in the program from which they were excluded or in any other program or to take study on a non-award basis within the AD Poly.

Appeal against Exclusion

A student who is excluded may lodge an appeal against exclusion. Under the Policy on Student Grievances and Appeals, the appeal must be in writing and be lodged with the Academic Affairs Committee and must

set out the grounds of the appeal, and be accompanied by supporting documentation where relevant. The appeal must be lodged by the date specified in the notification of exclusion in order for the student to continue to study in the next quarter in the event of a successful appeal.

The student will be given the opportunity to present their case with the Chief Academic Officer and the course instructor; if the student is still dissatisfied the student can lodge an appeal with the AD Poly Appeals Committee. The appeal may be lodged after the specified date up to six months from the date of the exclusion notification, in which case, if the appeal is successful, the student will have necessarily been prevented from studying for at least one quarter.

Readmission following Exclusion

A student who is excluded may apply for re-admission to the program from which they were excluded or for admission into a new program. An application for readmission following exclusion or for admission to a new program is not automatically approved.

An application for readmission, following exclusion, or for admission into a new program will be assessed by the course instructor. The course instructor will consider factors such as changed circumstances, academic and/or vocational performance since exclusion, maturity and motivation in order to be satisfied that the person concerned has a reasonable chance of success in the program. All recommendations are to be approved by the Chief Academic Officer.

A student who has been excluded may not recommence study until at least two standard quarters have elapsed since exclusion was imposed.

An application for readmission or for admission into a new program should be made at least three months prior to the commencement of the quarter in which the student seeks to resume study.

Where an application for readmission following exclusion is not approved, the student may lodge an appeal. Under the Policy on Student Grievances and Appeals, such an appeal is treated as an appeal against an admission decision.

Warning to Students at Risk

Abu Dhabi Polytechnic may provide a warning to students whose performance in a quarter is such that their performance is at a level inappropriate to good academic standing, the student is at risk of being given an academic standing of probation or excluded if their academic performance fails to improve. The record of the warning is not reported in the student's official academic transcript.

9. Counselling Policy

Introduction

The Abu Dhabi Polytechnic is committed to supporting and promoting all aspects of student well-being, and the counseling service is one way in which the AD Poly seeks to enable all students to develop their full potential.

Purpose of Policy

The purpose of this policy is:

- To document the counseling provision at AD Poly for students.
- To provide guidance to students and explain the circumstances and situations where counseling may be appropriate.
- To identify and provide conditions that will facilitate the well-being and personal development of students.
- To provide counseling service as an integral support mechanism for students' learning.
- To enable individual students to be more effective in their lives within and outside AD Poly.
- To help students make optimum use of the choices facing them in their academic, work, social and personal lives through individual counseling and group work with other students.

The Counseling Process

A student can approach the counselor through any staff member or by themselves.

The counselor approaches the student in a non-threatening way and explains to them the benefit from seeing the counselor.

The student should be assured that it is normal to seek help and that counseling is confidential.

The counselor shall conduct initial sessions, give information on confidentiality.

Initial sessions will be used to agree with the students the recording of statistical data, the keeping of working notes and the return of monitoring and feedback sheets.

Initial sessions will be used to make a counseling contract with the student, to allay students' fears, clarify the student's understanding of counseling, and explain counselor's method of counseling.

All forms associated with the counseling process will be securely kept and computerized and data is accessed only through the counselor and protected by a password known only to the counselor.

Counseling sessions will be conducted in a confidential and respectful manner.

Any break in confidence will be minimized by restricting information to only those people who can provide the required help.

Students will be clearly informed at the onset of the counseling contract what conditions could lead to confidentiality being broken.

In order to obtain support for students, therefore, there may be a break in confidence in the following exceptional circumstances. The student's consent will be obtained wherever possible (and the issue explored beforehand with the students unless time/circumstances do not permit) e.g. of such situations are:

- The student gives the counselor good grounds for believing that they will cause serious physical harm to others or themselves.
- The counselor has reason to believe that a student is in possession of or supplying illegal drugs on AD Poly premises.

- A student has a severe alcohol/drug problem which is interfering with their AD Poly work.

Monitoring

A report of the Counseling Service will be presented to the AD Poly Director annually through the Chief Academic Officer.

Record Keeping

All counseling reports and interactions between the counselor and student are stored on the counselor's computer. No information is recorded on any central student records. The data will be kept for three years and disposed of in an appropriate method.

10. Academic Programmes at Abu Dhabi Polytechnic

Career-Based Curriculum

Abu Dhabi Polytechnic offers a structured academic and training path to a career by providing students with an education that cultivates multiple awards. Al Ain graduates earn academic awards for their achievements as well as professional licenses. Academic awards provide students a continued education pathway, while a professional license gives the tools for practicing what they have learned in real world situations. Students enrolled in engineering or maintenance higher diploma programs, 3rd year students, have the choice to select from different specializations, avionics, aeromechanical, air traffic management, etc.

Al-Rowdah-Edad program

The Al Rowdah Academy, in conjunction with Kaplan International Colleges, is a part of the IAT network. Al Rowdah delivers foundation-style programs that allow students to develop both professionally and linguistically. The programs focus on increasing levels of English as well as the development of academic learning skills and confidence in dealing with career-related situations in English. Al Rowdah's programs enable students to progress to an IELTS level of 5.0, which enables admission into AD POLY's 'Basic Instructions' courses. The Al Rowdah campus for AD POLY is situated in Al Ain and is equipped with modern classrooms, wireless internet, a learning resource centre, counseling service and health centre.

The Foundation Program is a two- or four-quarter program developed to provide students with foundation level competency in English, Mathematics, and Sciences using an English medium curriculum to prepare them to get an IELTS Academic band 5.0.

Admission Requirements for Foundation Program

The basic admissions requirements for Al Ain International Aviation Academy Foundation Program are the following:

- 12th grade graduates from Science stream with an overall average above 70%;
- IELTS Academic less than band 4.5 or equivalent but more than 3.0;
- Successful entry examination and an interview.

Basic Instructions

All academy students in all programs share a common educational experience. This common educational experience is of duration of three complete quarters. During this common experience students with different backgrounds undergo the same initial education, training and assessment. This period of instruction is used to select students' pathways based on their performance. Upon fulfilling the entry requirements, students are enrolled in Basic Instructions (BI) that amounts for two academic quarters (each consists of 11 weeks). At the end of the second BI quarter, an academic review is conducted to assess and direct each of the students onto the next stage of training.

The academic review assessment is based on the student's successes and achievements during the BI period. Academically struggling students are recommended for the certificate in Aircraft Maintenance-Ground Support Equipment program; all others continue a third BI quarter that will decide a final pathway of training leading to an academic diploma, higher diploma, and/or a professional license. Student with a GPA for the three BI quarters exceeding 3.00 are given the opportunity to continue on the Higher Diploma Program in Aircraft Engineering Technology and qualifying for GCAA/ EASA Cat B1 or B2 licenses. Students with a GPA between 2.00 and 3.00 for the three BI quarters are set on the Diploma in Aircraft Maintenance Technology program and can qualify for GCAA/EASA's Cat A license with an opportunity to continue a Higher Diploma with GCAA/EASA Cat B option.

GPA at end of 3rd Quarter

**Progress towards
Academic Qualification**

**Progress towards
Professional Qualification**

| | | | |
|---|---|------------------------------|-----------------------------|
| 1 | Less than 2.00 at end of 2nd quarter | Certificate-GSE - MoHESR | None |
| 2 | Between 2.00 and 3.00 at end of 3rd quarter | Diploma/Higher Diploma in AM | GCAA-CAR/EASA part 66 Cat A |
| 3 | Above 3.00 with recommendations | Higher Diploma AET | GCAA-CAR/EASA part 66 Cat B |

The Aviation Programs

Aircraft Maintenance-Diploma and Higher Diploma Programs

Students enrolled in Aircraft Maintenance (AM) have the option of pursuing a two years Diploma or a three years Higher Diploma program. The Diploma program also leads to an EASA Certificate awarded to those completing successfully the CAT 'A' program. Following the completion of EASA's CAT 'A' program, a one year maintenance experience is required by the student to become eligible for an EASA CAT 'A' or a "Maintenance Certifying Mechanic" license. This license is mandatory for all aircraft mechanics working on civil aviation aircraft in approved maintenance facilities worldwide.

After finishing the Diploma program, students have the option to continue their training/education for one more year to earn a Higher Diploma in aircraft maintenance. The Higher Diploma program encompasses advanced topics in maintenance technologies taught at the EASA CAT 'B' level in one of two concentration/specialization areas, Aeromechanical and Avionics. Successful completion of this one year stage leads to the award of a Higher Diploma in Aircraft Maintenance. In addition, a student has the opportunity to pursue an EASA CAT 'B' License.

145 organization or a licensed repair and overhaul facility. The duration of this portion of the training falls within the 800 hours required by EASA/GCAA part 147 approved embedded program.

Career Opportunities

There has been exponential growth in the air transport industry and the need for aircraft maintenance technicians and engineers. As a result, the employment opportunities for Aircraft Maintenance graduates are excellent, especially those who complete the Diploma or Higher Diploma in Aircraft Maintenance Technologies and at an EASA / GCAA 147 approved maintenance training organization.

Program Layout

The Diploma and Higher Diploma programs are developed to fit the newly adopted quarter calendar system. The duration of the Diploma program is two years and the Higher Diploma can be earned one year after the Diploma program is completed. The following is a program layout of the three years constituting both degree programs.

| DIPLOMA/HIGHER DIPLOMA PROGRAM - AIRCRAFT MAINTENANCE | | | |
|---|--|-------------------------------------|----------------------------------|
| First Year-common year for D and HD | | | |
| Qtr-1 | Qtr-2 | Qtr-3 | Qtr-4 |
| MATH1011 6 Mathematics - 1 | MATH 1012 6 Mathematics -2 | ENGL 1003 5 Intro. To Aviation | ENGL 1004 3 Technical Writing |

Assessment of Diploma and Higher Diploma in Aircraft Maintenance

AD POLY programs assessment addresses the theoretical and practical aspects of the program and work-based learning that are acquired by the students during their study.

The assessment strategy for the purpose of the EASA award is largely limited to achieving 75% (basic pass mark as dictated by EASA) in the theoretical final examination. This is applicable to each individual EASA module and is not aggregated between theory and practice. However, some of the modules do require practical assessment as well, and have a passing mark of 75%.

Assessment for each degree course or module is contained in the Complete Assessment Schedule published and distributed to instructors at the start of each academic year and supplied to students in the Student Handbook.

The program is intended to satisfy the requirements of an EASA/GCAA approved Category A license, therefore students enrolled of a course being delivered under an EASA/GCAA Part 147 approval must attempt the EASA/GCAA assessment associated with each EASA/GCAA module. The EASA/GCAA assessment comprises a multi-choice question (MCQ) examination paper for each module, four 20 minute essay questions related to EASA/GCAA modules 7, 9 and 10 and practical exercises related to the overall course. The format of each EASA/GCAA assessment is in accordance with EASA/ GCAA Part 66 so as to ensure compliance with EASA/GCAA Part 147 requirements. These are illustrated in the Curriculum Manual.

Student maintained Logbooks form part of the overall assessment plan for the Diploma in Aircraft

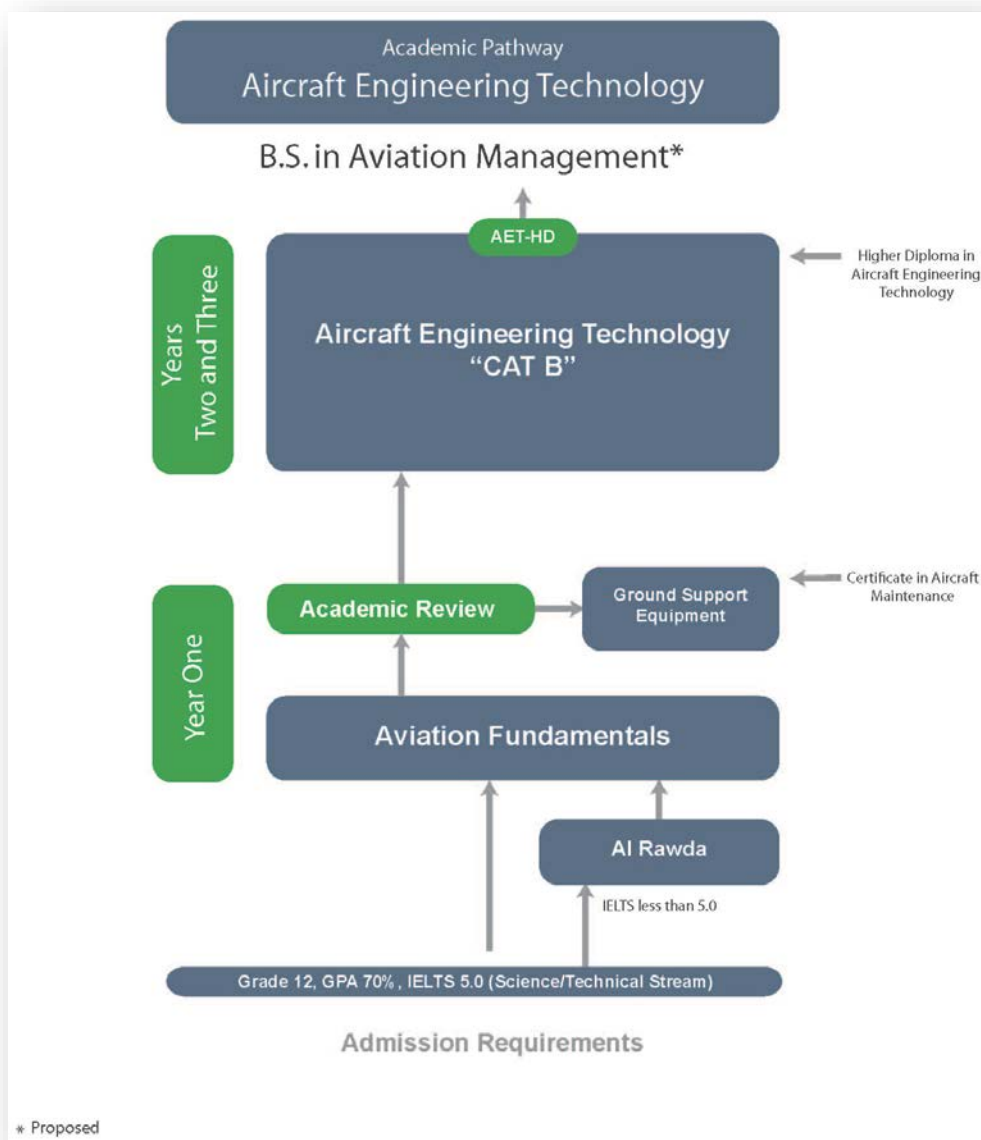

Engineering Technologies course. Satisfactory completion of logbooks forms part of the EASA / GCAA practical assessment.

EASA / GCAA Part 147 approved maintenance training organizations are approved to set, mark and grade EASA / GCAA Part 66 multi-choice examinations, essay examinations and practical assessments.

There will however, be progressive assessments which are a requirement to be fulfilled by the MoHESR for the award of the Higher Diploma in AET. These are based upon assessments performed in quizzes (20%), intermediate tests (30%), and final examination (50%).

Aircraft Engineering Technology-Higher Diploma Program

This three years program leads to the completion of training requirements of an EASA CAT B1.1-Aeromechanical technologies or the EASA CAT B2-Avionics License program in addition to the completion of the academic requirements of a Higher Diploma in Aircraft Engineering Technology. Having the training requirements for the EASA CAT B program, two years of industrial experience thereafter will make graduates eligible to apply for an EASA CAT 'B' Maintenance Certifying Technician License. This license is the key for work in civil aviation on commercial aircraft at any recognized or approved maintenance facility worldwide.

The Higher Diploma program is approved by the Ministry of Higher Education and Scientific Research (MoHESR), U.A.E. since 2011.

EDUCATIONAL AIMS OF THE PROGRAM

The Aims of the program are:

- Provide intermediate level courses that fulfill the requirements of higher education, whilst at the same time satisfying the knowledge requirements of the EASA / GCAA Part 66 Category B license syllabi.
- To provide an opportunity for students to obtain an academic award and a vocational qualification from a single course of study (when the Higher Diploma in Aircraft Engineering Technology is delivered by an EASA / GCAA 147 approved organisation), or to complete an academic course that also provides the knowledge base for the vocational qualifications in aircraft maintenance.
- Provide a combination of academic study and work based learning which will equip students with the knowledge and practical skills necessary for them to obtain an EASA / GCAA category B license and become proficient aircraft maintenance engineers.
- To provide students with the opportunity to develop their written and oral communications skills, and prepare them for further study at honors degree level

- To prepare students for employment as licensed aircraft maintenance engineers.
- To prepare students for continuous professional development by encouraging the use of personal development plans and introducing them to professional institutions

PROGRAM STRUCTURE

The program is made up of courses that are delivered by a quarter calendar system. The program is tailored to qualify students for a higher diploma in the aircraft engineering field. The program requires practical work, on the job training (OJT) and Internship with relevant industries to enhance the learning of students. The program provides two distinct pathways, one in mechanical and the other in electronics fields. The mechanical pathway leads to an aeromechanical CAT B 1.1 license and the electronic pathway leads to CAT B 2- Avionics license. Each license is part of the Higher Diploma program that is accredited by the MOHESR. The programs are delivered on a full-time basis over three academic years.

To satisfy EASA and GCAA requirements, the program must provide a minimum of 2400 hours of direct contact. Full details of module sequence, course duration and start and finish dates are issued at the commencement of each course.

CAREER OPPORTUNITIES

There has been exponential growth in the air transport industry and the need for aircraft maintenance engineers. The outcome is an unsatisfied demand of unprecedented proportions for graduate calibre aircraft maintenance engineers.

Over the last 10 years there have been a several reports, including ICAO and governmental papers highlighting the shortage of aircraft maintenance engineers. One, in January 2006 states "The recruitment of Licensed Engineers (Part 66, Category B and above) will become increasingly difficult over the next 3 years. It is clear from other studies that the situation remains the same today.

As a result, the employment opportunities for Aircraft Engineering graduates are excellent, especially those who complete the Diploma in Aircraft Engineering Technologies style course and at an EASA / GCAA 147 approved maintenance training organization.

Assessment of Higher Diploma in Aircraft Engineering Technologies

The assessment strategy is designed to assess the theoretical aspects of the course and the workshop and work-based learning that are acquired by the students during the course of study. The method of assessment is related to the learning outcome being assessed, and therefore in any one module a range of assessment methods may be used.

The assessment strategy for the purpose of the GCAA/EASA award is largely limited to achieving 75% (basic pass mark as dictated by the GCAA/EASA) in the theoretical final examination. This is applicable to each individual module and cannot be aggregated between theory and practice. However, some of the modules do require practical assessment mandatorily.

There will however, be progressive assessments which are a requirement to be fulfilled by the MoHESR for the award of the Higher Diploma in AET. These are based upon assessments performed in quizzes (20%), intermediate tests (30%), and final examination (50%). An element of record keeping is also induced into the course assessment strategy. Thus, the upkeep of a portfolio of records of research, assignments and other tasks given, helps the students inculcate the good practice of record keeping which is very common and vital in the aviation industry.

Full details of the assessment for each GCAA/EASA module are contained in the Complete Assessment Schedule published and distributed to staff at the start of each academic year and supplied to students in the Student Handbook.

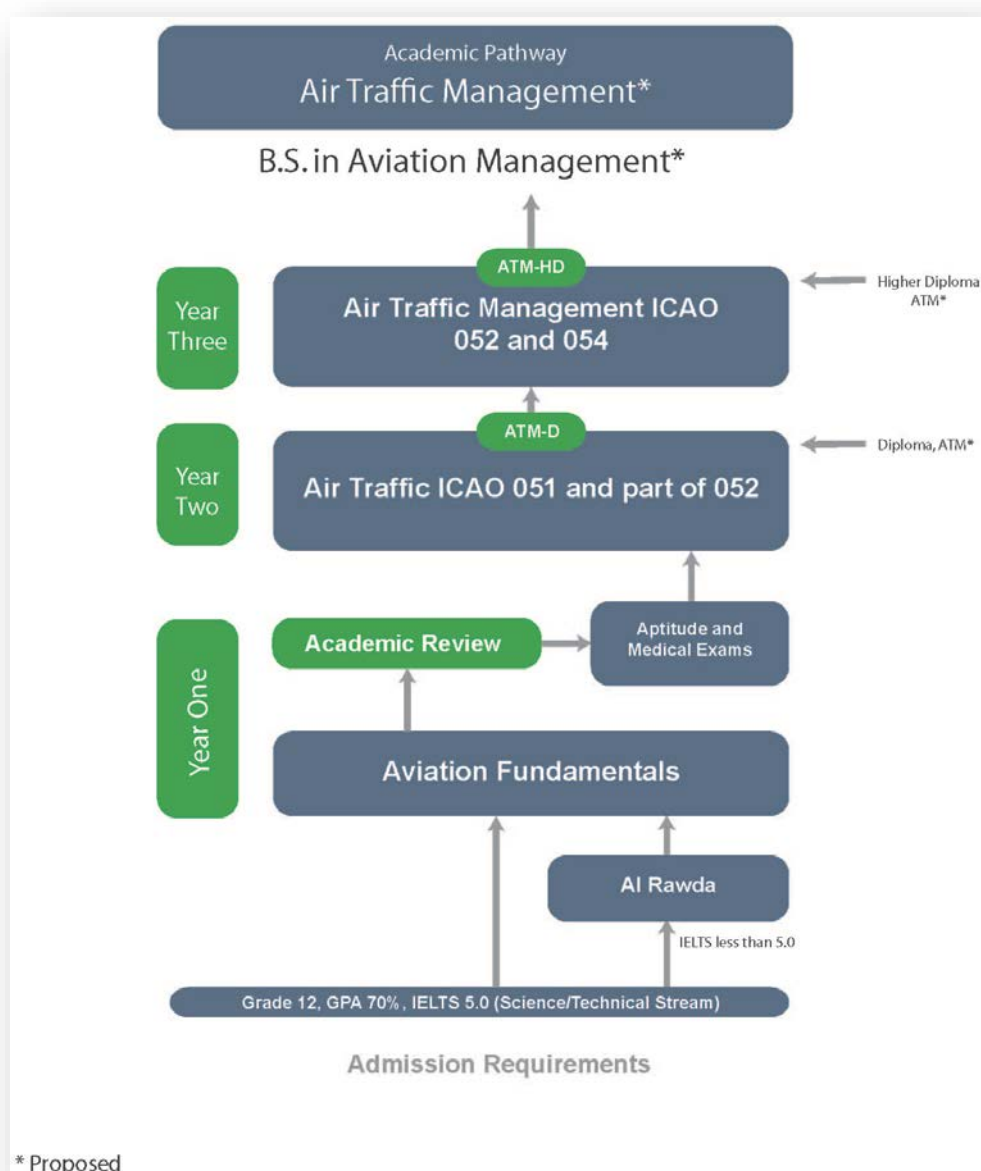

Students must pass all elements of assessment associated with each module in order to obtain a pass grade

for that module. The weighting of individual elements of assessment within a module are detailed in the module descriptions and module guides. For a module to be compensated by an examination board, all major elements of assessment within the module must satisfy any compensation regulations.

Student maintained Logbooks form part of the overall assessment plan for the course. In addition to the Aircraft Engineering Higher Diploma assessments, all students on EASA / GCAA Part 147 approved courses, who wish to obtain an EASA / GCAA Training Certificate, will be subject to EASA / GCAA Part 66 examinations and practical assessments in accordance with the requirements of EASA / GCAA and the approved organizations MTOE.

Certificate in Aircraft Maintenance (GSE)

The one year program leads to a Certificate in Aircraft Maintenance (Ground Support Equipment) issued by the Ministry of Higher Education and Scientific Research (MoHESR) U.A.E. This will enable the graduate to undertake aviation related maintenance job pertaining to the ground support equipment.

FEATURES OF THE PROGRAM

The program is a full-time program and is offered over a period of one year. The program follows same course as the Diploma and Higher Diploma programs for the first two quarters. However, for students who find it difficult to continue the academic path, this program gives them the opportunity to forge a less challenging aviation maintenance career.

EDUCATIONAL AIMS OF THE PROGRAM

The aims of the Program are to:

- Provide students with more vocational rather than academic qualifications,
- Prepare students for employment as Ground Support staff in an aircraft maintenance environment
- prepare students for continuous personal and professional development

PROGRAM STRUCTURE

The course is delivered full-time over one academic year. Full details of module sequence, course duration and start and finish dates are issued at the commencement of each course.

Certificate /Ground Support Equipment Course

The assessment strategy is designed to assess the theoretical and practical aspects of the course and the workshop and work-based learning that are acquired by the students during the course of study. The method of assessment is related to the learning outcome being assessed.

There will be progressive assessments which are a requirement to be fulfilled as dictated by the MoHESR. These are based upon assessments done in assignments, intermediate tests, final examination and class performance. An element of record keeping is also induced into the course assessment strategy. Thus, the upkeep of a portfolio of records of research, assignments and other tasks given, helps the students inculcate the good practice of record keeping which is very common and vital in the aviation industry. The assessment grading scheme is outlined below. Compulsory completion of logbooks will form part of the EASA / GCAA practical assessment plan.

Air Traffic Management (ATM)

The Air Traffic Management program is a three-year program comprising of a Basic Instruction and an ICAO standard training leading to academic qualifications and Air Traffic Controller certification.

Students must successfully complete the Basic Instruction and aptitude as well as medical testing before commencing training as Air Traffic Control Assistant (ATCA), first step in certification. After successfully completion of Basic Induction course, the students will be sent to an operational unit for On Job Training as ATCA.

Students' successful completion of a two year program will be awarded a Diploma in ATM.

In the third year, students will be trained to become Air Traffic Controllers (ATCO). This training is a combination of classroom and simulator training at AD POLY, after which students will be sent to an operational unit for On Job Training as ATCO. Student's successful completion of the third year will be awarded a Higher Diploma in ATM. Students may obtain Certificate as Air Traffic Controllers after successfully competing on the job training.

PROGRAM STRUCTURE

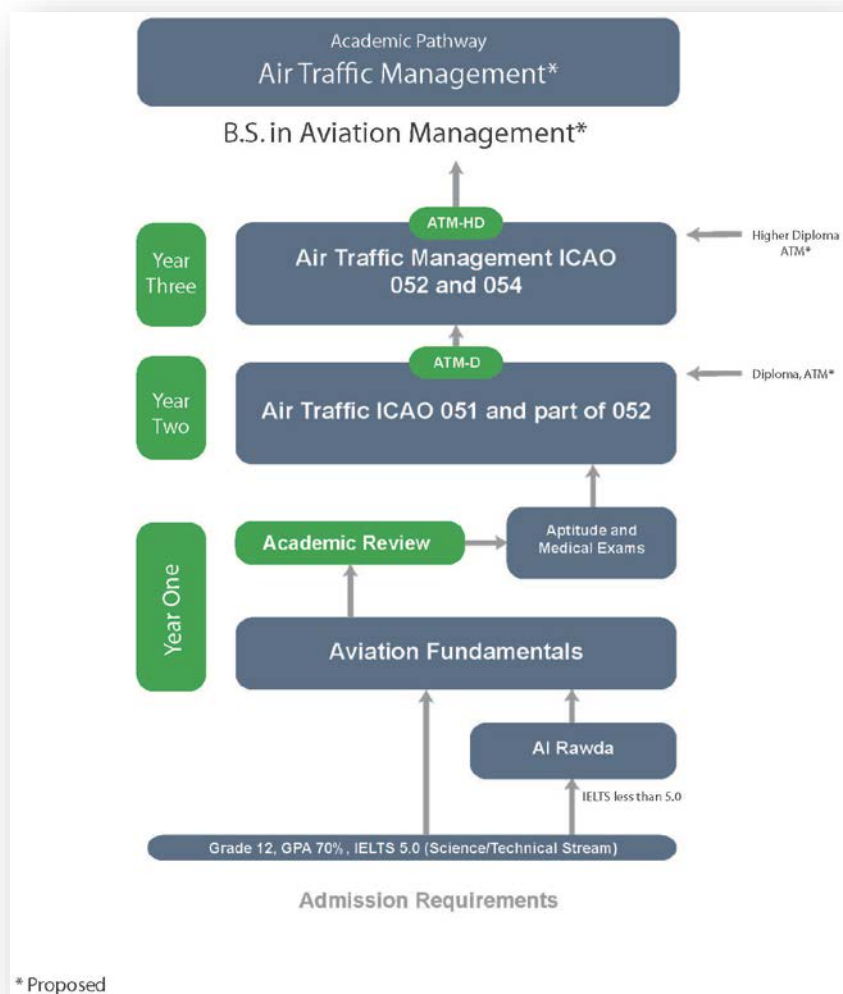

The program is delivered on full-time basis over two (Diploma) and Three (Higher Diploma) years. Students must successfully complete Basic Instruction and aptitude as well as medical testing, before commencing training to become Air Traffic Control Assistant (ATCA). After successfully completion of Basic Induction course, the students will be sent to an operational unit for On Job Training as ATCA.

Students will after successful completion of year 2 be awarded a Diploma in ATM. Third year, students will be trained to become Air Traffic Controllers (ATCO). This training is a combination of classroom and simulator training at AD POLY, after which students will be sent to an operational unit for On Job Training as ATCO.

Students will after successful completion of year 3 be awarded a Higher Diploma in ATM.

Students may after successful On Job Training obtain Certificate as Air Traffic Controllers.

Successful students of the program will have the opportunity to proceed to a Bachelor Degree in ATM.

CAREER OPPORTUNITIES

The Middle East has seen phenomenal growth of air traffic over the past years and all predictions are talking about further increase in the Middle East area over the years to come.

This is causing significant pressure on the region's air traffic control operations and is especially putting pressure on regional authorities to increase the capacity and efficiency of air traffic operations. To cope with the growth, air traffic control operators and authorities have to train and employ more and more Air Traffic Controllers for the civil airports as well as for the military airports in UAE. Graduates will leave AD POLY with a Higher Diploma in ATM and a GCAA approved rating as Air Traffic Controllers.

Higher Diploma and Applied Bachelor Program Descriptions

The academic programs at Abu Dhabi Polytechnic: Abu Dhabi Campus consist of the Higher Diploma in Nuclear Technology (HDNT) program, the Higher Diploma of Information Security Engineering Technology (HDISET), the Higher Diploma in Electromechanical Engineering Technology (HDET), and the Higher Diploma and Applied Bachelor in Petroleum Engineering Technology (HDABPET). These programs aim to provide the necessary balance of knowledge and practical skills to prepare students for a career in high tech industries. Graduates from the program will be able to:

- Assume technical positions to apply current technologies
- Make technical judgments
- Assist professional engineers to transfer and to develop new technologies
- Communicate clearly both in writing and orally in supervisory positions

To achieve these aims, the AD Poly academic programs consist of a balance (consistent with international technical standards) of lectures, tutorials, and laboratory work, and On-the-Job Training (OJT) and On-the-Job Performance (OJP) at related industrial centers. The curriculum includes general and specialized studies. Specializations vary depending on program as given below.

The Higher Diploma in Nuclear Technology (HDNT) includes the following six specializations:

- Nuclear power plant operation
- Mechanical systems
- Electrical systems
- Instrumentation and control
- Chemistry
- Radiation protection

The Higher Diploma in Electromechanical Engineering Technology (HDET) includes the following four specializations;

- Mechatronics
- Mechanical
- Electrical
- Instrumentation and control

The Higher Diploma of Information Security Engineering Technology (HDISET) includes the following three specializations:

- Secure software/applications development
- Network and cyber security
- Systems/servers security administration

The Petroleum Engineering Technology program awards Higher Diploma and Applied Bachelor and includes the following two specializations:

- Oil and gas process engineering technology
- Petroleum engineering technology

Higher Diploma in Nuclear Technology Degree Requirements

A total of 175 credit hours is required for the HDNT. These 175 credit hours are fully prescribed under the following academic areas:

| | Credit Hours |
|-------------------------------|--------------|
| Humanities | 15 |
| Mathematics and Sciences..... | 26 |
| Engineering Fundamentals..... | 33 |
| Nuclear Technology | 55 |
| On-the-Job Training | 16 |
| On-the-Job Performance | 30 |
| Total | 175 |

The academic areas are further described by the following course titles and credit hours:

Humanities (HUM)

| First Year | Credit Hours |
|-------------------|--------------|
| Study Skills..... | 2 |

| | |
|--|---|
| English..... | 2 |
| Technical Communications I and II..... | 4 |
| Foreign Culture I and II..... | 4 |

Third Year

| | |
|---------------------------|-----------|
| Islamic Civilization..... | 3 |
| Total | 15 |

Mathematics and Sciences

First Year Credit Hours

| | |
|------------------------------------|-----------|
| Mathematics I and II | 6 |
| Applied Technical Mathematics..... | 3 |
| Physics I and II..... | 6 |
| Nuclear Science | 3 |
| Chemistry I and II..... | 6 |
| Computer Essentials | 2 |
| Total | 26 |

Engineering Fundamentals (ENG)

First Year Credit Hours

| | |
|--|---|
| Industrial Safety and Professional Ethics..... | 2 |
| Schematics and Mechanical Diagrams | 3 |

| Mechanical Workshop..... | 2 |

Second Year

| | |
|---|-----------|
| Electrical Technology I and II | 6 |
| Instrumentation and Controls I and II | 6 |
| Mechanical Technology I and II | 6 |
| Thermodynamics | 3 |
| Heat Transfer and Fluid Flow | 3 |
| Total | 33 |

Advanced Energy Systems (AES)

First Year Credit Hours

| | |
|--------------------------|---|
| Nuclear Technology | 2 |
| Nuclear Industry..... | 2 |

Second Year

| | |
|--|---|
| Introduction to Nuclear Reactor Theory | 3 |
| Nuclear Reactor Operation | 3 |
| Reactor and Auxiliary Systems..... | 4 |
| Steam Generator and Auxiliary Systems..... | 4 |
| Turbine, Generator, and Auxiliary Systems..... | 2 |
| Electrical and Monitoring Systems..... | 4 |
| Miscellaneous Systems | 2 |
| Safety Systems | 3 |
| Protection and Control Systems | 2 |

Third Year

| | |
|----------------------------------|---|
| Nuclear Safety..... | 3 |
| Radiation Protection..... | 3 |
| Nuclear Regulations | 3 |
| Nuclear Materials | 3 |
| Radiation Measurement | 3 |
| Graduation Project I and II..... | 6 |

| | |
|---------------------------|-----------|
| Work-based Learning | 3 |
| Total | 55 |

HDNT On-the-Job Training

Second Year Credit Hours

| | |
|--------------------------------------|-----------|
| Nuclear Power Plant Orientation..... | 1 |
| NPP Maintenance Fundamentals..... | 3 |
| NPP Operation Support..... | 3 |
| NPP Engineering Fundamentals | 3 |
| Primary Local Operation | 3 |
| Secondary Local Operation..... | 3 |
| Total | 16 |

HDNT On-the-Job Performance

Students must select one of six specializations (Operator, Mechanical, Electrical, Instrumentation and Control, Chemistry, or Radiation Protection) by the time they are to start on-the-job performance in the third year of their program.

Operator Specialization

Third Year Credit Hours

| | |
|--|-----------|
| General Operation | 3 |
| Primary System Abnormal Operation | 3 |
| Secondary System Abnormal Operation..... | 3 |
| Emergency Operation | 3 |
| Administration Procedures..... | 3 |
| Prerequisites Review | 1 |
| System Monitoring | 3 |
| Equipment Operation I and II..... | 7 |
| System Operation..... | 4 |
| Total | 30 |

Mechanical Specialization

Third Year Credit Hours

| | |
|---|-----------|
| Measurement..... | 4 |
| Hand Tools | 4 |
| NPP Mechanical Drawing..... | 4 |
| Basic Mechanical Maintenance | 3 |
| Valve Maintenance | 4 |
| Centrifugal Pump Maintenance | 4 |
| Fan Maintenance | 3 |
| Mechanical Preventive Maintenance | 4 |
| Total | 30 |

Electrical Specialization

Third Year Credit Hours

| | |
|---|---|
| General Electrical Work..... | 3 |
| Preventive Maintenance for Electrical System... | 4 |
| MOV Maintenance..... | 4 |
| Air Circuit Breaker | 4 |
| Motor Control Center | 4 |

| | |
|------------------------------|---|
| Battery..... | 3 |
| Low Voltage Motor | 4 |
| Vacuum Circuit Breaker | 4 |
| Total 30 | |

Instrumentation and Control Specialization

| Third Year | Credit Hours |
|-------------------------------------|---------------------|
| I&C Work Preparation..... | 4 |
| Operating Test Equipment..... | 3 |
| I&C Preventive Maintenance..... | 4 |
| Tubing and Fitting..... | 4 |
| Inspection I&C Components | 4 |
| I&C Adjustment and Calibration..... | 3 |
| I&C Replacement..... | 4 |
| I&C Repair | 4 |
| Total 30 | |

Chemistry Specialization

| Third Year | Credit Hours |
|---------------------------|---------------------|
| Analytical Chemistry..... | 4 |

| | |
|---------------------------------------|---|
| Analytical Instrumentation | 4 |
| Corrosion and Control | 4 |
| Water Treatment..... | 3 |
| Radiochemistry..... | 4 |
| Radiation Measurement..... | 3 |
| Primary System Water Treatment..... | 4 |
| Secondary System Water Chemistry..... | 4 |
| Total 30 | |

Radiation Protection Specialization

| Third Year | Credit Hours |
|--|---------------------|
| General Radiation Protection | 3 |
| Radioactive Contamination Control | 3 |
| Radioactive Waste Management..... | 3 |
| Radioactive Waste Disposal | 3 |
| Exposure Control | 3 |
| Radiation Control Area Access Control..... | 3 |
| Radioactive Material Control..... | 3 |
| Radiological Survey..... | 3 |
| Radiological Analysis Instruments..... | 3 |
| Radiological Instruments | 3 |
| Total 30 | |

Policy for Assignment of Student Specializations

The Abu Dhabi Polytechnic will use the following process to assign specializations to each student:

1. Students will be informed before their On-the-Job training commences of the policy for assignment of specializations and the constraints on size and schedule for each specialization.
2. By the end of a student's On-the-Job Training (end of Year 2 Quarter 4), they are required to rank from 1 (highest) to 6 (lowest) their preference for their HDNT specialization and On-the-Job Performance and provide this to the HDNT Specialization Assignment Committee (an Ad Hoc Committee under the Academic Affairs Committee).
3. If the Committee determines that there is an even distribution of specializations fitting the workforce plan and the training schedule, then students will be assigned to their highest preference. If the distribution does not meet these criteria, then a student's second choice is used to even out the distribution. If an even distribution is still not produced, then third choices or further are considered until an even distribution is established.
4. In the case where the Committee determines that there is not an even distribution of specializations using students' highest preference, then the Committee has the right to contact instructors (both academic and training) and solicit their insights to influence a student's assignment to their higher priorities.

HDNT Program Completion Requirements

After all 175 credit hours in the prescribed courses have been completed with a satisfactory grade, the student will have completed the program requirements and be eligible for conferral of the Higher Diploma in Nuclear Technology. The Job Qualification Certificate is not a requirement for graduation.

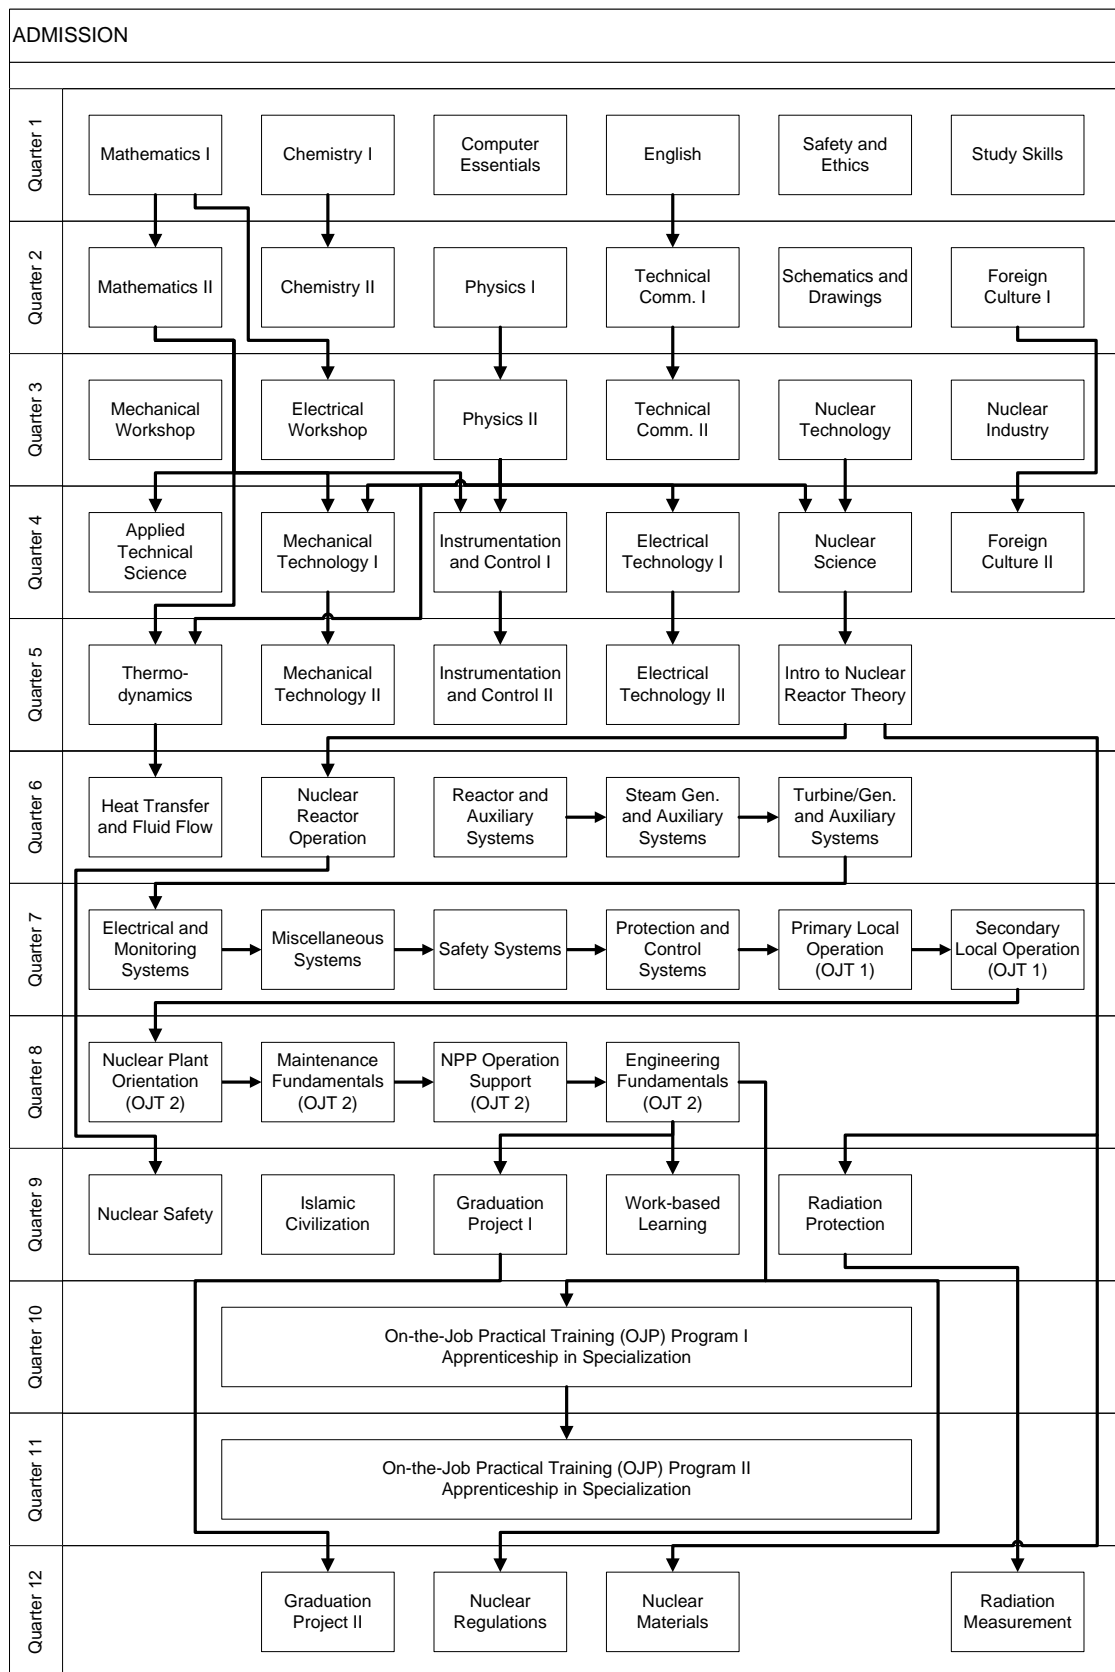

Figure 3: Flow sheet of Higher Diploma in Nuclear Technology degree requirements.

Higher Diploma and Applied Bachelor in Electromechanical Engineering Technology Degree Requirements

A total of 172 credit hours is required for the HDET. These 172 credit hours are fully prescribed under the following academic areas:

| | Credit Hours |
|------------------------------------|--------------|
| Humanities | 13 |
| Mathematics and Sciences..... | 26 |
| Engineering Fundamentals..... | 33 |
| Electromechanical Technology | 70 |
| On-the-Job Performance | 30 |
| Total | 172 |

The academic areas are further described by the following course titles and credit hours:

Humanities

| First Year | Credit Hours |
|--|--------------|
| English..... | 2 |
| Technical Communications I and II..... | 4 |
| Foreign Culture I and II..... | 4 |

| Total | 13 |

Mathematics and Sciences

| First Year | Credit Hours |
|------------|--------------|
|------------|--------------|

Electromechanical Engineering Technology

The program specific courses are under process and development.

HDET On-the-Job Performance

Students must select one of four electromechanical engineering technology specializations (mechatronics, mechanical, electrical, instrumentation and control) at the end of their second year of their program and complete 30 credit hours of On-the-Job Performance in an industrial setting.

HDET Program Completion Requirements

After all 172 credit hours in the prescribed courses have been completed with a satisfactory grade, the student will have completed the program requirements and be eligible for conferral of the Higher Diploma in Electromechanical Engineering Technology.

Industrial Certification Requirements

Abu Dhabi Polytechnic has been communicating with several potential strategic industrial partners in order to secure agreements and training arrangements such that the HDET students to receive industrial certification. AD Poly is seeking certifications with the following tentative partners:

- Siemens Academy in Berlin (Siemens Technik Akademie), Germany. Towards securing Siemens Certificate in Mechatronics
- FESTO Didactic, Germany. Towards securing FESTO Certificate in Pneumatics, Hydraulics and Automation
- ASET International Oil and Gas Training Academy, Aberdeen, Scotland. Towards securing SQA Qualifications.

Higher Diploma and Applied Bachelor in Information Security Engineering Technology Degree Requirements

In the first year of the program, general mathematics, science, English language, humanities, engineering fundamentals, and an introduction to information technology and security industry courses will be offered to prepare solid ground for the students for their subsequent years of study that involve both On-the-Job Training (OJT) and On-the-Job Performance (OJP). The Higher Diploma program, starting the second year, is designed to develop the basic principles of three information security specializations, namely, software security, network and cyber security, and systems/servers security administration. The third and fourth quarters of the second year are handled by the On-the-Job Training (In-House Training) to engage the students in theoretical and on-campus training on secure software development, network security, and servers security administration. At the first quarter of the third year, graduation project selection and preparation will take place. All students are required to complete a third year graduation project based on their selection on one of the offered topics of specializations. The second and third quarters of the third year is devoted to the On-the-Job Performance (Field training) based on their selected specialization. AD Poly will host specialized training labs. By the last quarter of this year, students will use the experience gained at the OJT and OJP to finish their third year graduation project. Students who finish all requirements will receive their higher diploma certificate along with their professional licenses. Students can perform degree articulation to obtain the bachelor of engineering technology for students with high achievements in the higher diploma. A total of 180 credit hours is required for the Higher Diploma in Information Security Engineering Technology (HDISET). These 180 credit hours are fully prescribed under the following academic areas:

| | Credit Hours |
|--|--------------|
| Humanities | 12 |
| Mathematics and Sciences..... | 15 |
| Info Technology & Security Fundamentals..... | 41 |
| Specialization Track Courses | 94 |
| On-the-Job Performance | 18 |
| Total | 180 |

The academic areas are further described by the following course titles and credit hours:

Humanities (Foundation Year)

| First Year | Credit Hours |
|--|--------------|
| English for IT specialists I & II..... | 4 |
| Technical Communications I and II..... | 3 |
| Middle East Studies | 2 |

Second or Third Year

| | |
|---------------------------|-----------|
| Islamic Civilization..... | 3 |
| Total | 12 |

Mathematics and Sciences

| First Year | Credit Hours |
|---|--------------|
| Mathematics I and II | 6 |
| Discrete Mathematics | 3 |
| Introduction to Computer Electronics..... | 3 |
| Digital Logic and Design..... | 3 |
| Total | 15 |

Information Technology and Security Fundamentals

| First Year | Credit Hours |
|--|--------------|
| Computer Hardware and Software Essentials.... | 3 |
| Intro to Programming & Problem Solving..... | 3 |
| Programming in Java I & II | 6 |
| Web Programming I & II | 6 |
| Computing Ethics | 2 |
| Computer Organization & Architecture | 3 |
| Database Management Systems | 3 |
| Data Structure and Algorithm Design | 3 |
| Introduction to Software Development | 3 |
| Introduction to Computer Networks Security.... | 3 |
| Introduction to Operating Systems Security | 3 |
| Security in Computing | 3 |
| Total | 41 |

Secure Software Development

| Second Year | Credit Hours |

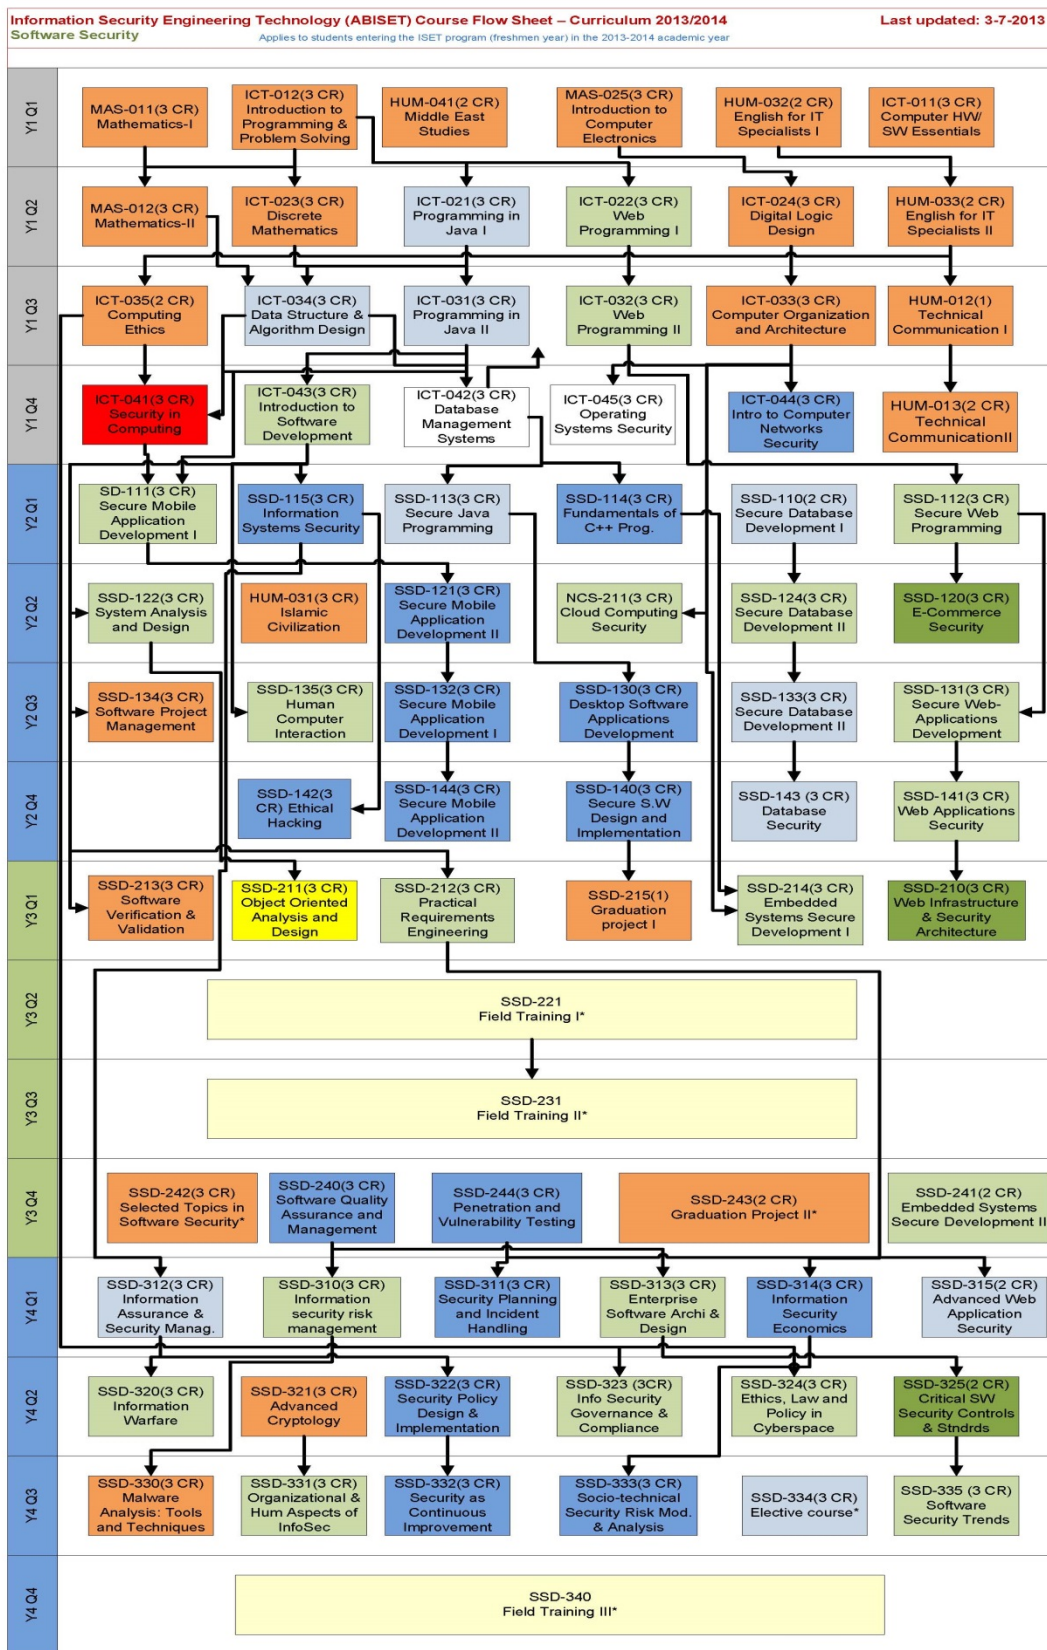

Figure 4: Flow sheet of ABISSET Software Security specialization requirements.

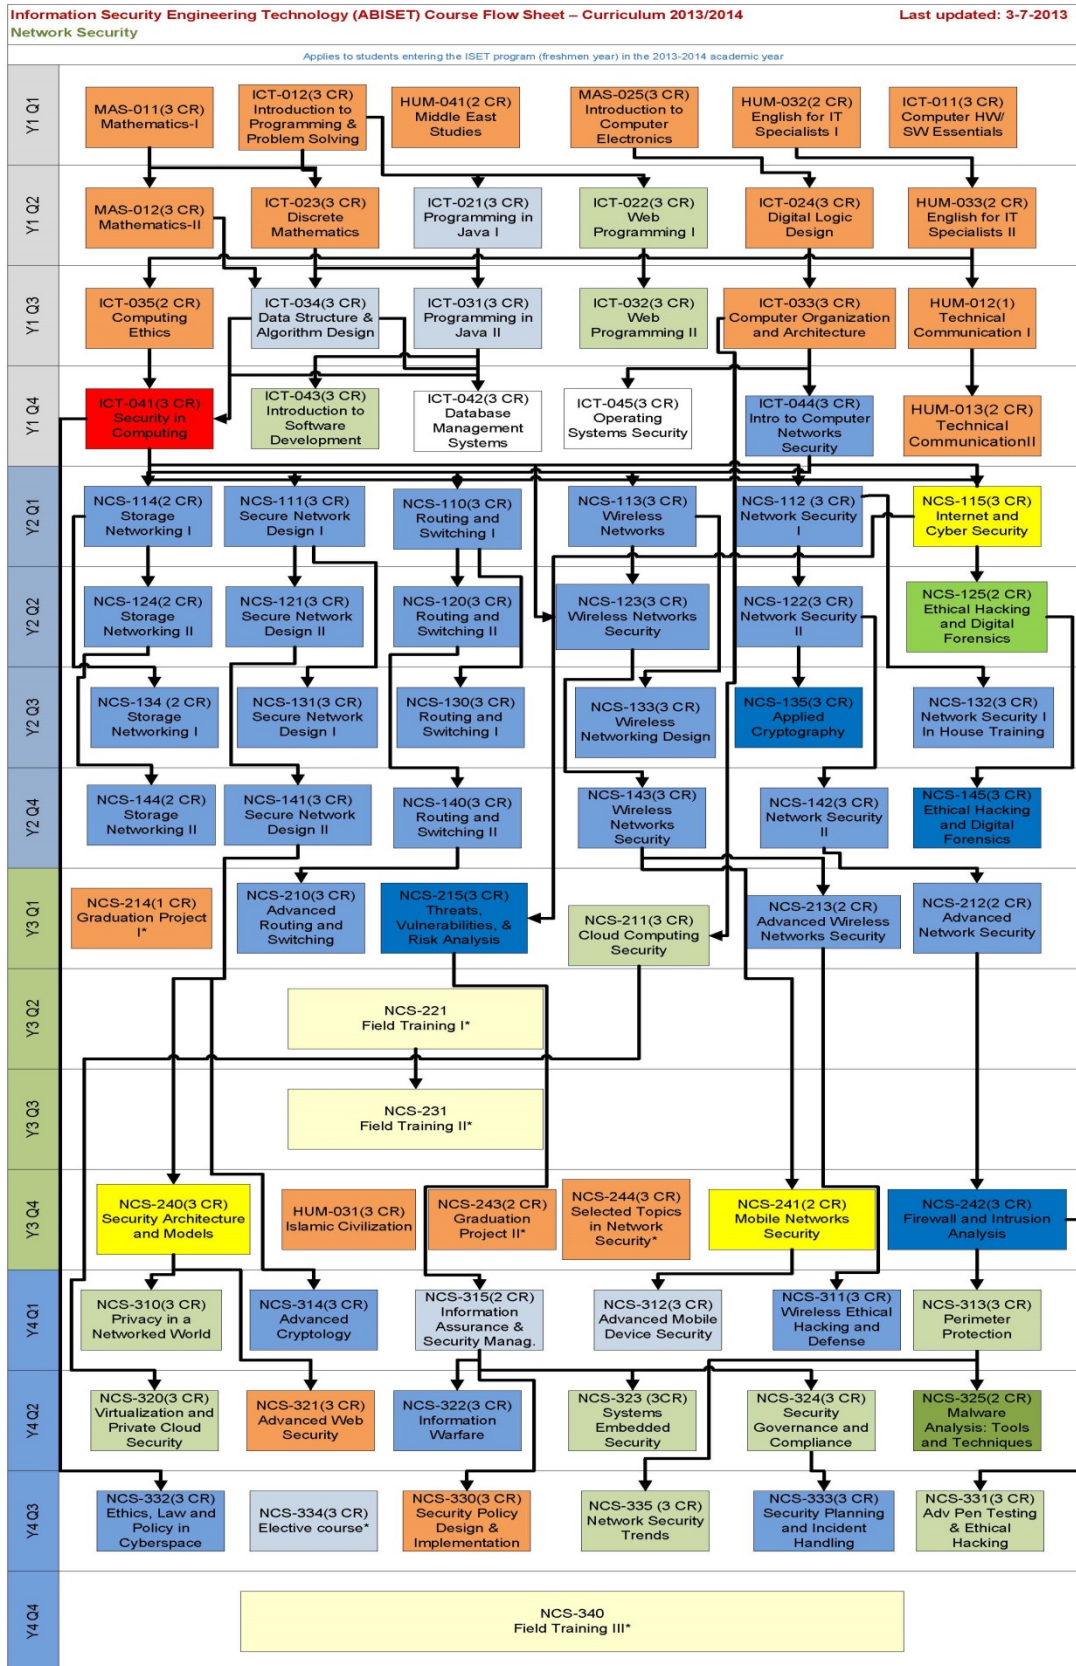

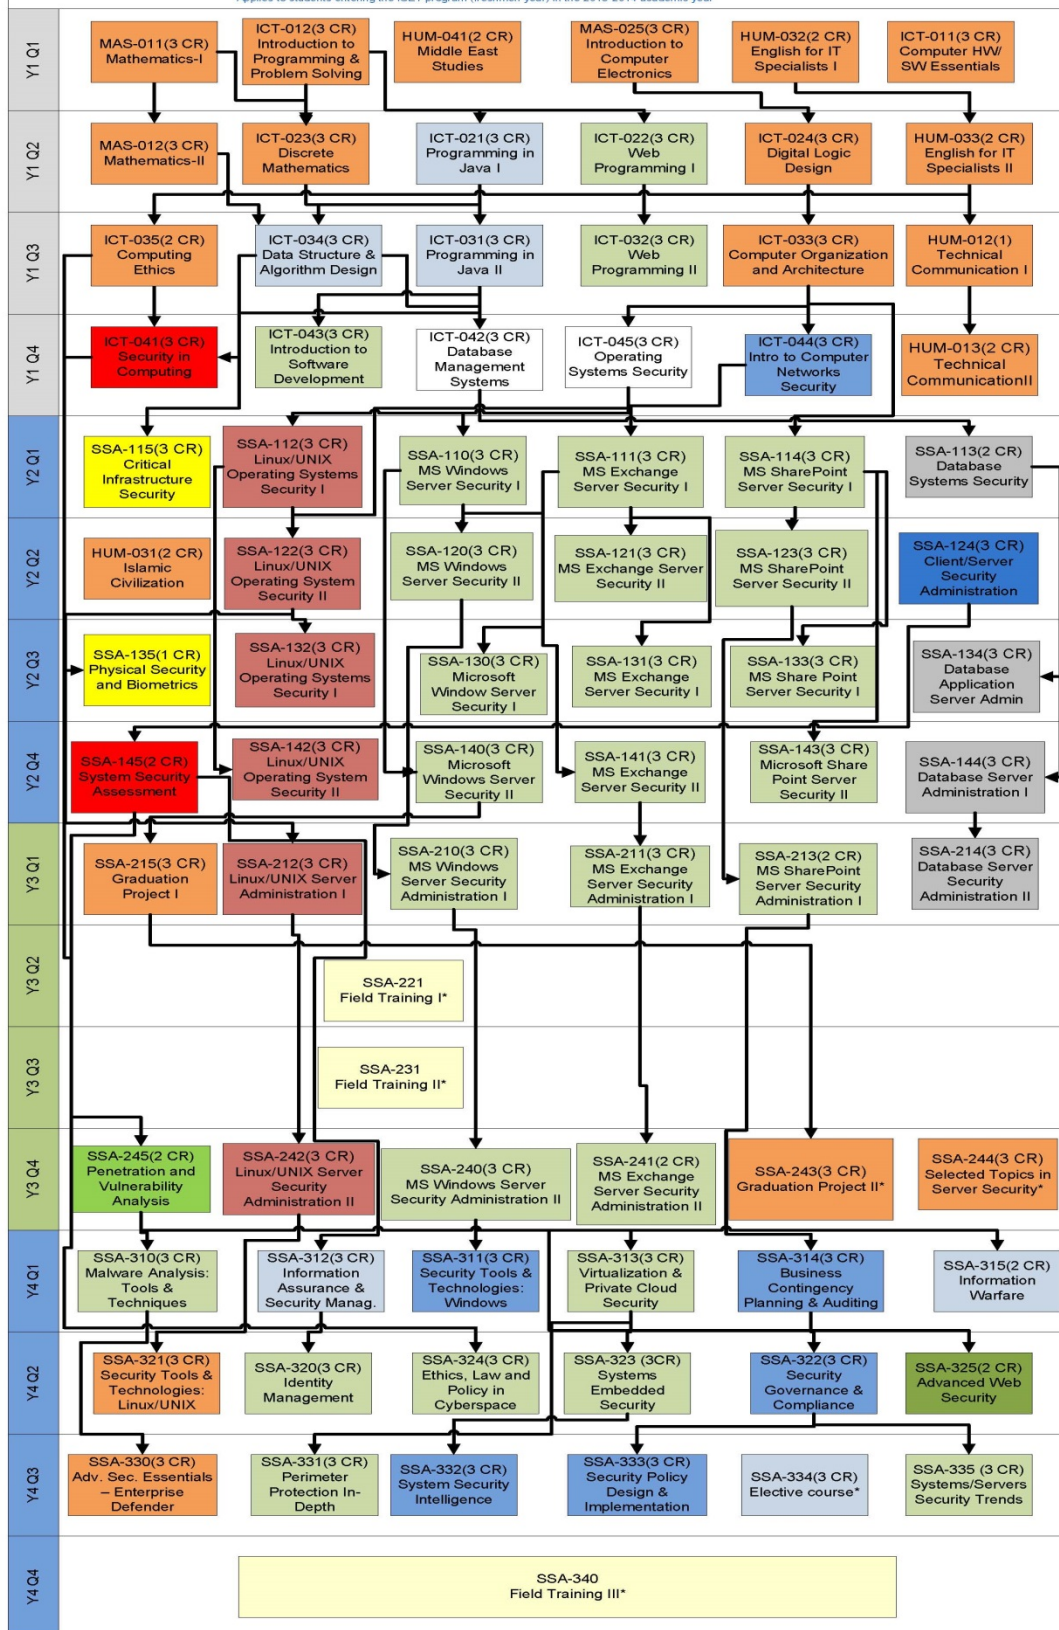

Figure 5: Flow sheet of ABISSET Network Security specialization requirements.

Applies to students entering the ISET program (freshmen year) in the 2013-2014 academic year

*Requires Department Approval

Figure 6: Flow sheet of HDISET System/Server Security specialization requirements.

Higher Diploma and Applied Bachelor in Petroleum Engineering Technology Degree Requirements

In order to reach petroleum engineering technology objectives, the students must receive the best possible preparation to enter petroleum industry. PET program curriculum gives every student a solid foundation in petroleum and oil and gas process engineering fundamentals, and also insists on experience in the industry. As a result, PET graduates will enter the industry ready to be productive contributors, but they also will understand the need to continue to learn and improve their skills throughout their careers.

A total of 188 credit hours are required for the Higher Diploma in Petroleum Engineering Technology (HDPET) specialization and 248 credit hours for the Applied Bachelor in Petroleum Engineering Technology (ABPET) specialization. For Oil and Gas Process Engineering specialization, a total of 191 credit hours are required for the Higher Diploma and 245 credit hours for the Applied Bachelor. These credit hours are fully prescribed under the following academic areas:

| Subject | Credit Hours | | | |
|-----------------------------|-----------------------|-----------------------|---------------------------------|-----------------------|
| | Petroleum Engineering | | Oil and Gas Process Engineering | |
| MAS, HUM, ENG, PET, OGP | Higher Diploma (HD) | Applied Bachelor (AB) | Higher Diploma (HD) | Applied Bachelor (AB) |
| Humanities | 15 | 17 | 15 | 17 |
| Math & Science | 21 | 23 | 21 | 23 |
| Engineering Fundamentals | 36 | 36 | 33 | 33 |
| ICT | 3 | 3 | 3 | 3 |
| Petroleum Engineering Depth | 59 | 73 | 59 | 73 |
| Specialization Depth* | 54 | 96 | 60 | 96 |
| Total | 188 | 248 | 191 | 245 |

*Two specializations: "Petroleum Engineering Technology" and "Oil and Gas Process Engineering Technology"

The academic areas are further described by the following course titles and credit hours:

Humanities (HUM)

| Year | Subject | Credit Hours | |
|-------------|----------------------------|---------------------|-----------------------|
| | | Higher Diploma (HD) | Applied Bachelor (AB) |
| First Year | Study Skills | 2 | 2 |
| | English | 2 | 2 |
| | National Culture & Society | 2 | 2 |
| | Technical Communications | 3 | 3 |
| | English for Oil and Gas | 3 | 3 |
| Second Year | Islamic Civilization | 3 | 3 |
| Fourth Year | HUM Elective | - | 2 |
| Total | | 15 | 17 |

Mathematics and Sciences (MAS)

| Year | Subject | Credit Hours | |
|-------------|--------------------------|---------------------|-----------------------|
| | | Higher Diploma (HD) | Applied Bachelor (AB) |
| First Year | Mathematics I, II, & III | 9 | 9 |
| | Physics I & II | 6 | 6 |
| | Chemistry I & II | 6 | 6 |
| Fourth Year | MAS Elective | - | 2 |
| Total | | 21 | 23 |

Information and Communication Technology (ICT)

| Year | Subject | Credit Hours | |
|------------|---|---------------------|-----------------------|
| | | Higher Diploma (HD) | Applied Bachelor (AB) |
| First Year | Introduction to Programming & Problem Solving | 2 | 2 |
| Total | | 2 | 2 |

In the first four quarters of the first year, general mathematics, science, English language, national culture, engineering fundamentals, an introduction to petroleum industry and one specialization course are offered to prepare solid ground for the students for their subsequent years of study (second, third and fourth) that involves both On-Campus Training (OCT) and On-the-Job Training (OJT). The fourth quarter offers supplementary courses of basic engineering and non-fundamental engineering materials along with basic principles of statics and dynamics to provide materials in the main fields of electrical, mechanical and thermal engineering.

Engineering Fundamentals (ENG)

| Year | Subject | Credit Hours | | | |
|-------------|--|-----------------------|----|-------------------------|----|
| | | Petroleum Engineering | | Oil and Gas Process Eng | |
| | | HD | AB | HD | AB |
| First Year | Industrial Safety and Pro. Ethics | 2 | 2 | 2 | 2 |
| | Engineering Graphics Schematics and Mech. Diagrams | 2 | 2 | 2 | 2 |
| | Mechanical Workshop | 3 | 3 | 3 | 3 |
| | Introduction to Electrical Technology | 3 | 3 | 3 | 3 |
| | Instrumentation and Control I | 3 | 3 | 3 | 3 |
| | Thermodynamics | 3 | 3 | 3 | 3 |
| | Mechanical Technology I | 3 | 3 | 3 | 3 |
| | Applied Electrical Technology | 3 | 3 | 3 | 3 |
| | Engineering Mechanics | 2 | 2 | 2 | 2 |
| | Instrumentation and Control II | 3 | 3 | 3 | 3 |
| Second Year | Mechanical Technology II | 3 | 3 | 3 | 3 |
| | Heat Transfer & Fluid Flow | 3 | 3 | - | - |
| | Total | 36 | 36 | 33 | 33 |

Petroleum Engineering Depth (PET)

| Year | Subject | Credit Hours | |
|-------------|------------------------------|---------------------|-----------------------|
| | | Higher Diploma (HD) | Applied Bachelor (AB) |
| First Year | Intro. to Petroleum Industry | 3 | 3 |
| Second Year | Applied Safety | 2 | 2 |
| | On-the-Campus Training | 30 | 30 |
| Third Year | Graduation Project | 2 | 2 |
| | Project Management | 2 | 2 |
| | Applied Health | 2 | 2 |
| | On-the-Campus Training | 15 | 15 |
| | Pet. Eng. Numerical Methods | 3 | 3 |
| Fourth Year | Advanced Eng. Mathematics | - | 3 |

| | | | |
|-------|------------------------|----|----|
| | Petroleum Economics | - | 2 |
| | PET Design Project | - | 2 |
| | Special Topics in PET | - | 3 |
| | Applied Environment | - | 2 |
| | PET Technical Elective | - | 2 |
| Total | | 59 | 73 |

The first and second quarters of the second year of PET program are designed to develop the basic principles of specializations knowledge namely “petroleum engineering technology” and “oil and gas process engineering technology” as well as integrating the related topics of fundamental subjects. All courses offered up to this point are designed to provide students with solid ground for the On-Campus Training that will be conducted during the third and fourth quarters of the second year.

The thirds and fourth quarters of the second year are handled by the on-campus Petroleum Engineering Training program to engage the students in theoretical and on-campus training on Petroleum Engineering operation units. The second year subjects are designed to support the following parts of the program in the third year and to establish foundations from which Higher Diploma graduates can build a range of evolving knowledge and skills. The subjects in year three are designed to provide both further consolidation and specialized knowledge suitable to higher technician level. At this year, first quarter will offer advanced topics of Petroleum Engineering and specializations. All students are required to complete a third year graduation project based on their selection on one of the offered topics of specializations. The second quarter of the third year is devoted to the On-the-Campus training while the third quarter is allocated for on-the-job training. Based on their selected specialization, students will spend quarters 3 (third year) and 4 (fourth year) in specialized Abu Dhabi National Oil Company (ADNOC) training that is called on-the-job training (OJT). During the OCT and OJT, students’ performance will be assessed and accordingly will receive their professional technical license to work. In the last quarter of third year, students will use the experience gained at the OJT to finish their third year project. Students who finish all requirements will receive their higher diploma certificate along with their professional licenses if they decide to do so or if required by their sponsorship.

Specializations Depth

Petroleum Engineering Technology (PET)

| Year | Subject | Credit Hours | |
|-------------|----------------------------------|---------------------|-----------------------|
| | | Higher Diploma (HD) | Applied Bachelor (AB) |
| First Year | Petroleum Geology | 3 | 3 |
| Second Year | Reservoir Rock Properties | 3 | 3 |
| | Drilling Technology I | 2 | 2 |
| | Logging and Formation Evaluation | 4 | 4 |
| | Reservoir Fluid Properties | 3 | 3 |
| | Reservoir Engineering | 3 | 3 |
| Third Year | Drilling Technology II | 3 | 3 |
| | Geomechanics | 3 | 3 |
| | Well Testing | 2 | 2 |
| | On-the-Job Training | 14 | 14 |
| | Well completion | 4 | 4 |
| | Production Logging | 4 | 4 |
| | Petr. Production Fundamentals | 3 | 3 |
| | Unconv. Res. Completion & Stim. | 3 | 3 |
| Fourth Year | Equipment Design and Selection | - | 3 |
| | Reservoir Engineering II | - | 3 |
| | Gas Production Engineering | - | 3 |
| | Artificial Lift Methods | - | 4 |
| | Advanced Drilling Engineering | - | 3 |
| | Enhanced Oil Recovery | - | 3 |

| | | | |
|-------|--------------------------------------|-----------|-----------|
| | Reservoir Simulation | - | 4 |
| | Applied Water Technology & Corrosion | - | 2 |
| | Production Enhancement | - | 3 |
| | On-the-Job Training | - | 14 |
| Total | | 54 | 96 |

Students admitted for the Applied Bachelor and those who obtained a Higher Diploma with high achievements who are interested to pursue their studies will continue studying for one more year (fourth year) to obtain an Applied Bachelor in Petroleum Engineering Technology. Senior level (fourth year) subjects include advanced classes in engineering disciplines and specializations along with three approved elective courses (one per each quarter). Approved elective courses may be chosen from a variety of subjects to suit each student disciplinary background, oil and gas industry interests, and professional project area. A graduation design project has to be completed by the end of the third quarter of fourth year. The last quarter in the program (16th) is allocated for the second quarter of on-the-job training. Figures 7 and 8 below show the sequence and results of the Higher Diploma and Applied Bachelor for “petroleum engineering technology” and “oil and gas process engineering technology” PET program specializations, respectively.

Oil and Gas Process Engineering Technology (OGP)

| Year | Subject | Credit Hours | |
|-------------|------------------------------------|---------------------|-----------------------|
| | | Higher Diploma (HD) | Applied Bachelor (AB) |
| First Year | Organic Chemistry | 3 | 3 |
| Second Year | Equilibrium Thermodynamics | 2 | 2 |
| | Fluid Mechanics | 3 | 3 |
| | Mass Transfer Operations I | 3 | 3 |
| | Elementary Petro. Process Eng. | 2 | 2 |
| | Physical Chemistry | 3 | 3 |
| | Chemical Reactors and Mixing | 4 | 4 |
| | Process Heat Transfer | 3 | 3 |
| Third Year | Analytical Chemistry | 3 | 3 |
| | Mass Transfer Operations II | 4 | 4 |
| | Surface Prod. Operation Facilities | 2 | 2 |
| | Gas Processing and Treatment | 3 | 3 |
| | On-the-Job Training | 14 | 14 |
| | Petroleum Storage and Loading | 2 | 2 |
| | Water Treatment and Injection | 4 | 4 |
| | Intro. to Refinery Processes | 4 | 4 |
| | Process Equipment Drawing | 1 | 1 |
| Fourth Year | Chemical Reactor Design | - | 4 |
| | Utility Systems and Operations | - | 2 |
| | Petroleum Refinery | - | 3 |
| | Process Modeling, Sim. & Opt. | - | 3 |
| | Petrochemicals | - | 3 |
| | Plant and Equipment Design | - | 4 |
| | Process Dynamics & Control | - | 3 |
| | On-the-Job Training | - | 14 |
| Total | | 60 | 96 |

Policy for Assignment of Student Specializations

The PET program at AD Poly uses the following process to assign specializations to each student:

1. Students will be informed in quarter 3 of year 1 of the policy for assignment of specializations and the constraints on size and schedule for each specialization.

2. Students have to fill out Specialization Selection Form by the end of quarter 3 of year 1 and submit it to the head of department.
3. The program Specialization Assignment Committee (an Ad Hoc Committee under the Academic Affairs Committee) determines whether the distribution of specializations fits the students sponsorships, workforce plan and the training schedule, then students will be informed about their specialization preference approval.

PET Program Completion Requirements

The technical content of the HD and AB in PET program focuses on the applied aspects of science and engineering in that portion of the technological spectrum closest to technician and engineering operational functions. The technical content develops the skills, knowledge, methods, procedures, and techniques associated with the technical specializations and are appropriate to the goals of the program.

Using credit hours to evaluate technical content, the breakdown of the credit hours required for the HD and AB in PET is given in the following table:

| Subject | Credit Hours | | | | | | | |
|--|-----------------------|------------|-----------------------|------------|---------------------------------|------------|-----------------------|------------|
| | Petroleum Engineering | | | | Oil and Gas Process Engineering | | | |
| MAS, HUM, ICT, ENG, PET, OGP | Higher Diploma (HD) | Percent | Applied Bachelor (AB) | Percent | Higher Diploma (HD) | Percent | Applied Bachelor (AB) | Percent |
| Humanities | 15 | 8 | 17 | 7 | 15 | 8 | 17 | 7 |
| Math & Science | 21 | 11 | 23 | 9 | 21 | 11 | 23 | 10 |
| Engineering Fundamentals | 36 | 19 | 36 | 15 | 33 | 18 | 33 | 14 |
| ICT | 3 | 2 | 3 | 1 | 3 | 2 | 3 | 1 |
| Petroleum Engineering Depth ⁺ | 59 | 30 | 73 | 29 | 59 | 30 | 73 | 29 |
| Specialization Depth | 54 | 29 | 96 | 39 | 60 | 32 | 96 | 40 |
| Total | 188 | 100 | 248 | 100 | 191 | 100 | 245 | 100 |

⁺ includes on-the-job training (14 credit hours for HD and 28 credit hours for AB)

Higher Diploma:

Just under 2/3 ($\approx 60\%$) of the credit hours are devoted to the student's technical program and specialization. Just over 1/3 ($\approx 40\%$) of the credit hours are general to both specializations (humanities, mathematics and sciences, and engineering fundamentals).

Applied Bachelor:

Just above 2/3 (70%) of the credit hours are devoted to the student's technical program and specialization. Just below 1/3 (30%) of the credit hours are general to both specializations (humanities, mathematics and sciences, and engineering fundamentals).

The technical content of the curriculum consists of a technical core and the increasingly complex technical

specialties found later in the curriculum culminating in a one and a two-quarter apprenticeship at a petroleum facility for HD and AB degree students, respectively. Using ADNOC competency assurance management system (CAMS) as a guide, the technical content was developed to provide the prerequisite foundation of knowledge necessary for the technical specialties according to the petroleum industry standards.

Laboratory activities are an integral part of the sciences, engineering fundamentals, and specialization courses and are used to develop student competence in the use of analytical and measurement equipment common to the discipline and appropriate to the goals of the program.

Technical courses are meant to develop student knowledge and competence in the use of standard design practices, tools, techniques, and computer software appropriate to the oil and gas upstream and downstream processes maintenance and operation.

After all credit hours in the prescribed courses have been completed for HD or AB degrees, respectively, with a satisfactory grade, the student will have completed the program requirements and be eligible for conferral of the Higher Diploma and/or Applied Bachelor in Petroleum Engineering Technology. The Job Qualification Certificate is not a requirement for graduation.

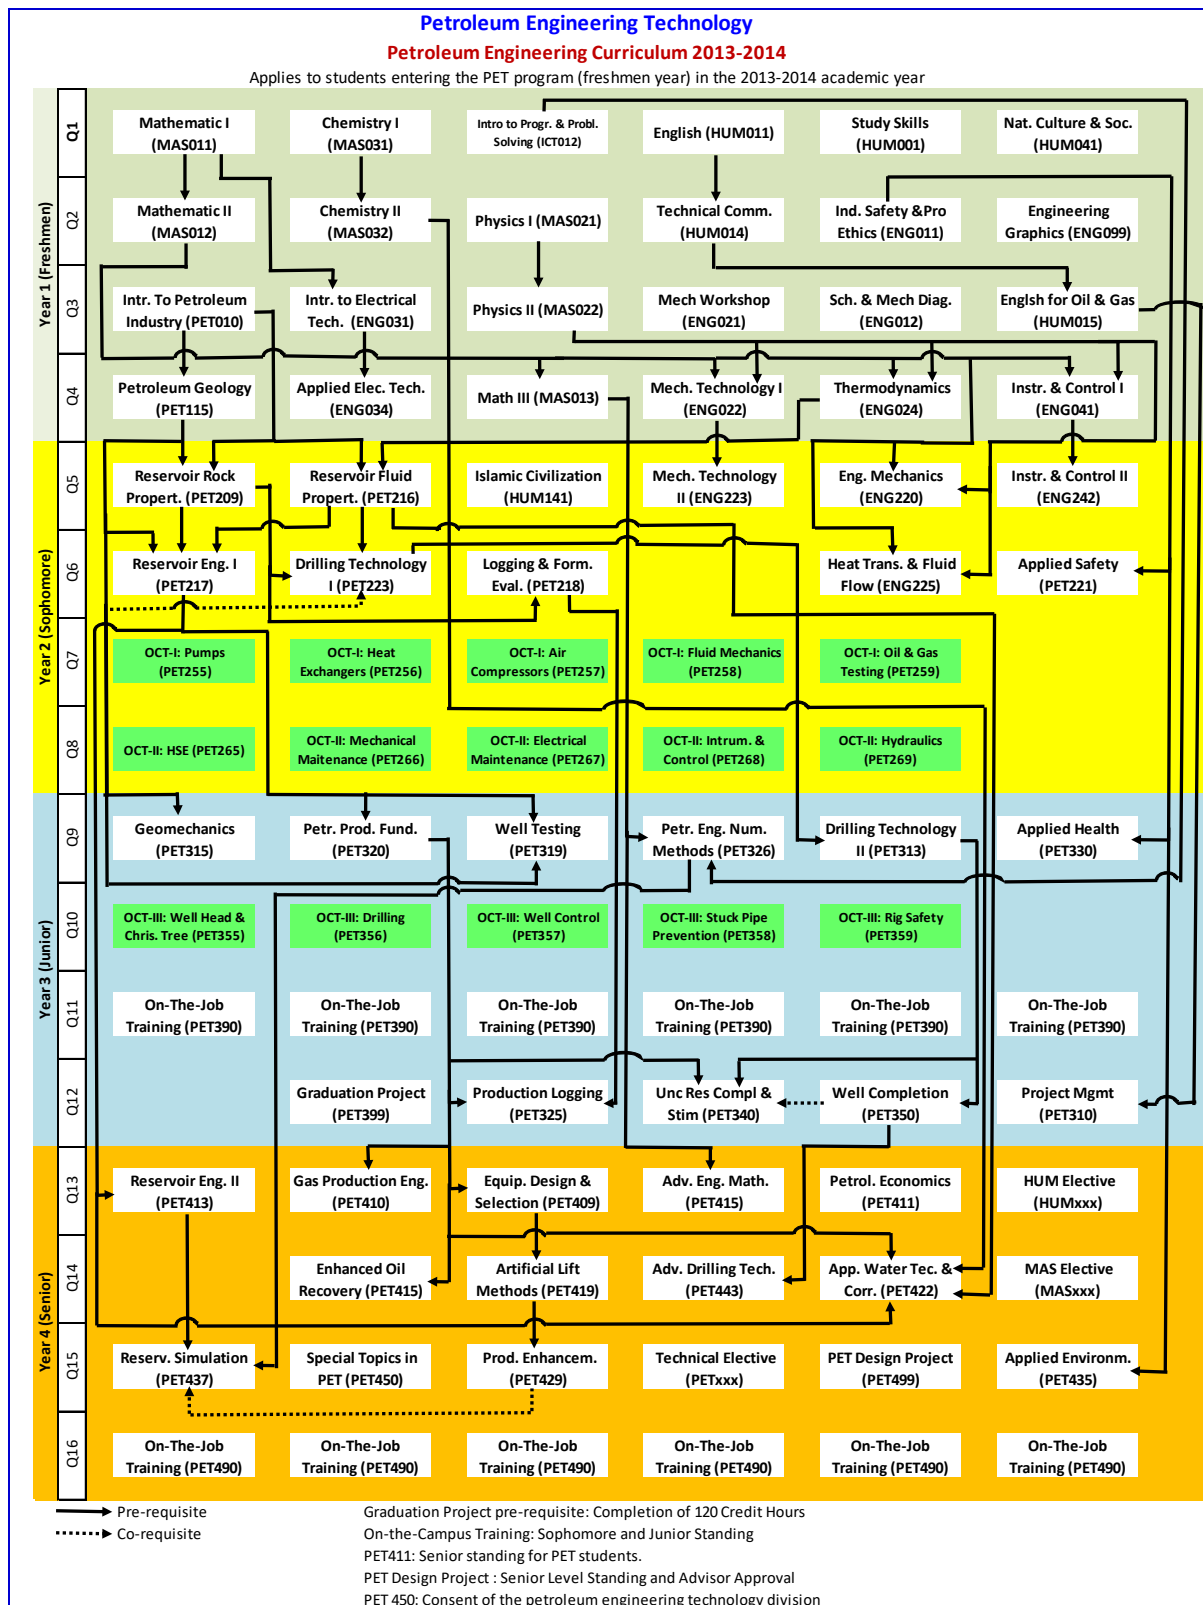

Figure 7: Flow sheet of Petroleum Engineering specialization requirements.

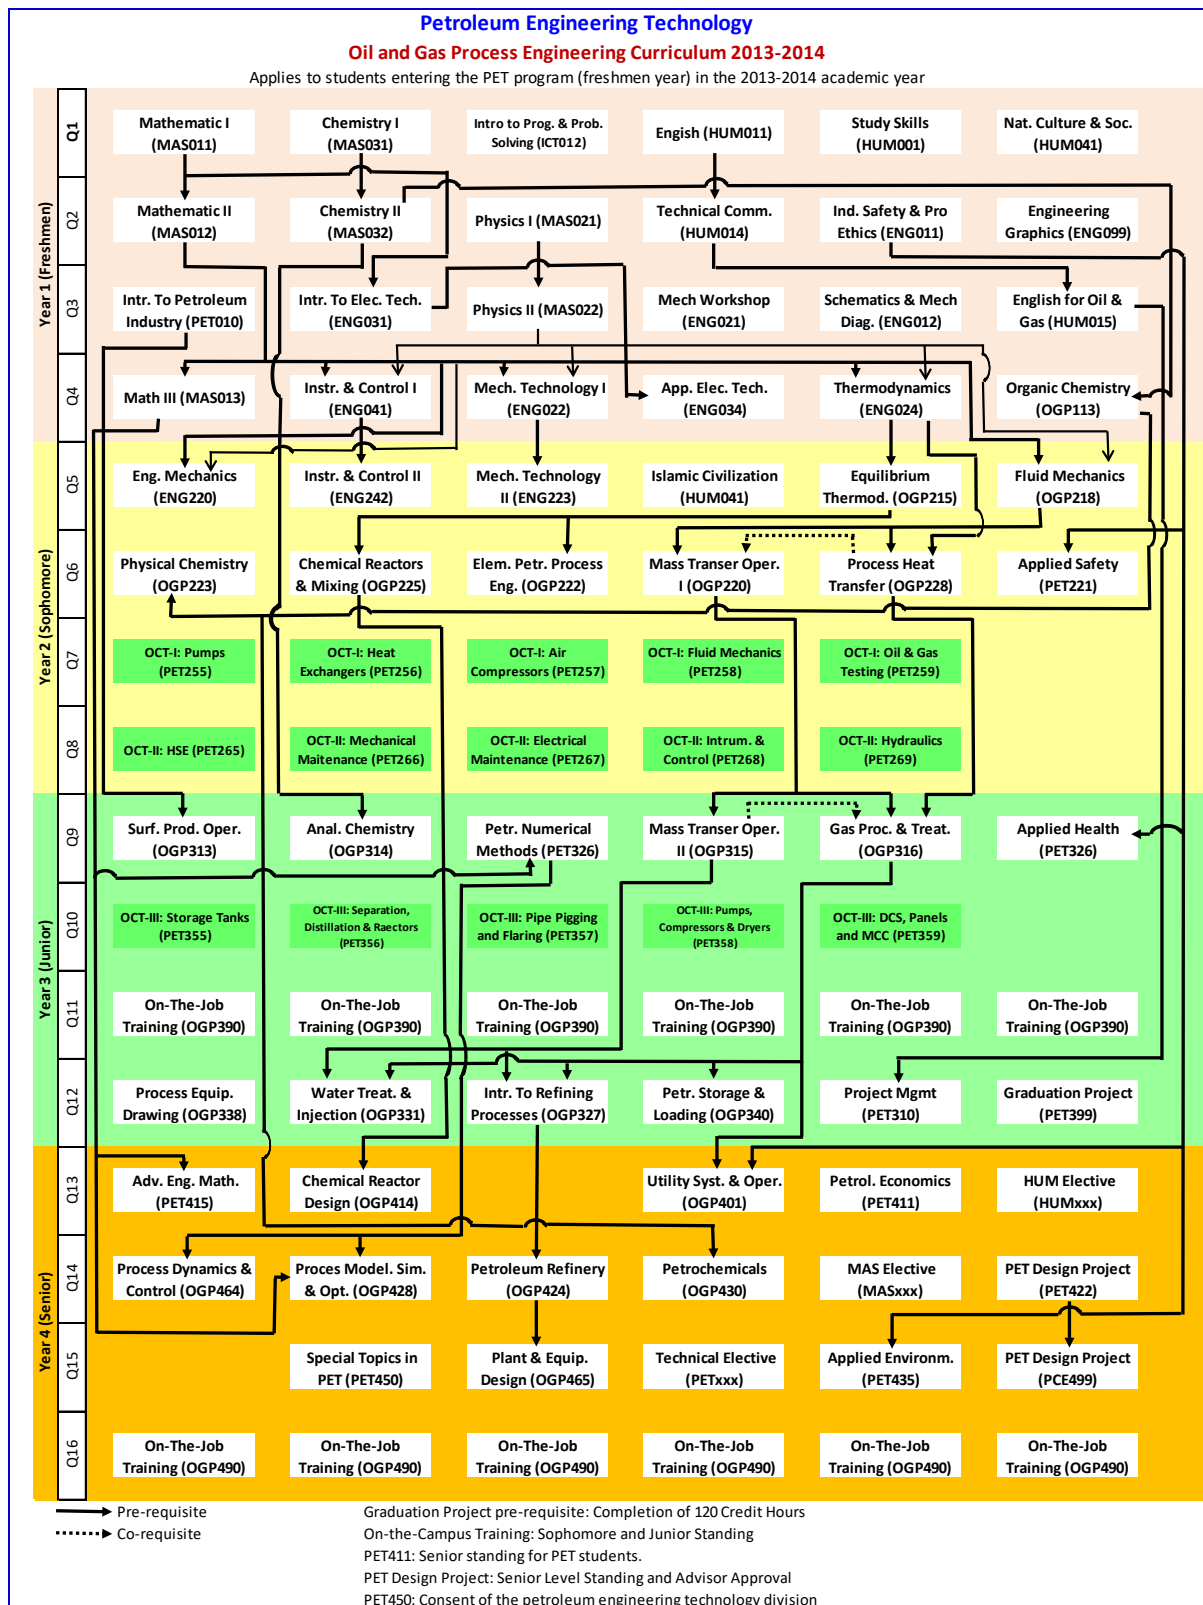

Figure 8: Flow sheet of Oil and Gas Process Engineering specialization requirements.

11.Academic Calendar for 2013-2014

Quarter-1 (2013)

| | | |
|------------------|--------------------|---|
| Sun | 25 Aug | Selected faculty report to work (new) |
| Sun | 01 Sep | Remaining staff report to work (previous) |
| Sun – Wed | 25 Aug – 04 Sep | Skills for Life (S4L) |
| Thurs | 28 August | New student orientation by Heads |
| Sun | 01 Sept | Quarter 1 classes begin |
| Tue | 05 Sept | Registration; add and drop last day |
| Mon – Thu | 14 – 17 Oct | Observing Arafat and Eid Al Adha (TBC) |
| Thu | 31 Oct | Early registration for Quarter 2 starts |
| Tue | 05 Nov | Hijri New Year (TBC) |
| Sun – Thu | 10 – 14 Nov | Quarter 1 Final Exams |
| Sun-Thu | 17 Nov-21 Nov | First Break starts |

Quarter-2 (2013-2014)

| | | |
|------------|---------------|---|
| Sun | 24 Nov | Quarter 2 Classes Begin |
| Sun-Mon | 24-25 Nov | Registration; Add and drop last day |
| Mon-Tues | 02-03 Dec | NATIONAL DAY |
| Wed | 01 Jan | New Year |
| Tue | 14 Jan | Prophet's Birthday (TBC) |
| Thu | 30 Jan | Early registration for Quarter 3 starts |
| Sun - Thu | 02 – 06 Feb | Quarter 2 Final Exams |
| Sun - Thu | 09 - 13 Feb | Second Break Starts |

Quarter-3 (2014)

| | | |
|------------|-----------------|---|
| Sun | 16 Feb | Quarter 3 Classes Begin |
| Tues | 18 Feb | Registration; Add and drop last day |
| Thu | 17 April | Early registration for Quarter 4 starts |
| Sun - Thu | 27 APR – 01 May | Final Exams Quarter 3 |
| Sun - Thu | 04 - 08 May | Third Break Starts |

Quarter 4 (2014)

| | | |
|------------|-----------------|---|
| Sun | 11 May | Quarter 4 Classes Begin |
| Mon | 12 May | Registration; Add and drop last day |
| Tue | 27 May | Israa & Miaraaj (TBC) |
| Tuesday | 08 Jul | Early registration for 2014 – 2015 starts |
| Sun – Thu | 20/7– 24/7 | Final Exams Quarter 4 |
| Sun | 27 Jul – 31 Aug | Summer Break Starts- 5 weeks |

TBC: To be confirmed

12.Course Descriptions

Courses are listed in alphabetical-numerical order according to the course code. The credit for each course is indicated after the title in the course description. A credit is mainly based on the number of lecture hours per week and is less affected by the number of laboratory or on-the-job experience hours per week.

Advanced Energy Systems (AES)

AES-011 Nuclear Technology (2 CR)

This course introduces comprehensive knowledge of current world leading nuclear technology, history of nuclear science, and other technologies including nuclear safety, license, regulations, and NPP radioactive waste management.

Lecture 2 hrs/wk, Tutorial 3 hrs/wk.

AES-012 Nuclear Industry (1 CR)

This course introduces comprehensive knowledge of current world nuclear industry fields including design, manufacturing, construction, operation, Public Acceptance (PA), and Quality Assurance (QA) program related to NPP.

Lecture 1 hr/wk, Tutorial 4 hrs/wk.

AES-021 Introduction to Nuclear Reactor Theory (3CR)

This course provides basic concepts and theories associated with the theory of the fission process (delayed and prompt neutrons, thermal and fast neutrons); control of fission process; neutron flux effects on reactor power; neutron leakage; fission products; neutron sources; radiation from fission and from fission products; and, residual heat/decay heat.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

AES-022 Nuclear Reactor Operation (3CR)

This course covers basic reactor operation including reactor core characteristics, reactor core parameters, reactivity coefficients and control, reactor startup and shutdown, reactivity variations, and reactivity control methods.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

AES-031 Reactor and Auxiliary Systems (4 CR)

This course provides comprehensive knowledge of Reactor and Auxiliary Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.

Lec 4 hrs/wk, Prac Training 2 hrs/wk, Tut 2 hrs/wk.

AES-032 Steam Generator and Auxiliary Systems (4 CR)

This course provides comprehensive knowledge of Steam generator and Auxiliary Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.

Lec 4 hrs/wk, Prac Training 2 hrs/wk, Tut 2 hrs/wk.

AES-033 Turbine, Generator, and Auxiliary Systems (4 CR)

This course provides comprehensive knowledge of Turbine, Generator, and Auxiliary Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.

Lec 4 hrs/wk, Prac Training 2 hrs/wk, Tut 2 hrs/wk.

AES-034 Electrical & Monitoring Systems (2 CR)

This course provides comprehensive knowledge for Electrical and Monitoring Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.

Lec 2 hrs/wk, Prac Training 2 hrs/wk, Tut 2 hrs/wk.

AES-035 Miscellaneous Systems (1 CR)

This course provides comprehensive knowledge of Miscellaneous Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.
Lec 1hr/wk, Prac Training 2 hrs/wk, Tut 3hrs/wk.

AES-036 Safety Systems (4 CR)

This course provides comprehensive knowledge of Safety Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.
Lec 4 hrs/wk, Prac Training 2 hrs/wk, Tut 3hrs/wk.

AES-037 Protection & Control Systems (4 CR)

This course provides comprehensive knowledge of Protection and Control Systems of NPPs and specific knowledge including system function, design basis, components, operation, and operation experiences of NPPs.
Lec 4 hrs/wk, Prac Training 2 hrs/wk, Tut 3hrs/wk.

AES-041 Nuclear Safety (3CR)

This course deals with basic concepts of Design Basis Accident (DBA) of NPPs, severe accidents, accident analysis, principles and methods for assessing risk and reliability. The course also covers several safety parameters and safety analysis of NPPs and safety improvement, international cooperation and trend.
Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

AES-042 Radiation Protection (3CR)

This course provides detailed radiological protection theory and techniques, radiation detection and measurement principles, radiological survey and analysis instruments, radioactive material control, environmental considerations and emergency planning.
Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

AES-043 Nuclear Regulations (3 CR)

This course introduces international codes and standards of nuclear industry fields and regulations including nuclear acts and subordinate codes, and technical specifications of APR1400 NPP. Through this course students can acquire practical knowledge of the regulations of NPP operation and administration.
Lecture 3 hrs/wk, Tutorial 6 hrs/wk.

AES-044 Nuclear Materials (3 CR)

This course introduces basic concepts and applications of nuclear materials, and provides the essential knowledge of materials science including modified structure of material, mechanical properties, as well as the effects of radiation and environment on material properties.
Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

AES-045 Radiation Measurement (3 CR)

This course introduces comprehensive knowledge of radiation basics including radiation sources, radiation interactions and provides essential knowledge of general properties of radiation detectors, radiation measurement and technologies.
Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

AES-051 Graduation Project I (3CR)

This course provides topic subject classes to students, helps them prepare a graduation project, and garners interest in critical issues in NPP operation and maintenance. Topics include Safety Culture, Probabilistic Safety Assessment, Risk Informed Regulation, Severe Accident Management, Emergency Operation, Root Cause Analysis, Steam Generator Management Plan, Life Cycle Management, Maintenance Rule, and Preventive Maintenance.
Lecture 3 hrs/wk, Tutorial 6 hrs/wk.

AES-052 Graduation Project II (3 CR)

This course provides guidelines for the students to write, present, and defend their findings in their graduation project work in AES-051.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

AES-053 Work-Based Learning (3 CR)

This course provides practical experience at the workplace in a nuclear power plant.

Laboratory 9 hrs/wk.

On-the-Job Training

The following courses (AES-061 through AES-625) are implemented by training providers associated with the Korea Hydro and Nuclear Power Company at the Shin-Kori Nuclear Power Plant in Busan, South Korea and are taught as in-series modules.

AES-061 NPP Orientation (1 CR)

This course provides general knowledge and skills for working at NPP including industrial safety, security program, fire fighting, and administration procedures for access control of NPP radioactive areas.

AES-062 NPP Maintenance Fundamentals(3 CR)

This course provides knowledge and skills of general tasks carried out in NPPs for mechanical maintenance and machinery management in the Mechanical Department, electrical maintenance and equipment management in the Electrical Department, and instrumentation and control (I&C) maintenance and equipment management in the I&C Department.

AES-063 NPP Operation Support(2 CR)

This course provides knowledge and skills of general tasks carried out in NPPs in Operation Support Department, Radiation Safety Department, and Chemistry Department.

AES-064 NPP Engineering Fundamentals(3 CR)

This course provides knowledge and skills of general tasks in NPPs in Safety and Engineering Support Department, System Engineering Department, and Program Engineering Department.

AES-071 Primary Local Operation(3 CR)

This course provides knowledge and skills of each primary system for local operators. The course covers local operators' common role and responsibility, general activities under primary normal condition, and measures mainly under primary abnormal condition.

AES-072 Secondary Local Operation(3 CR)

This course provides knowledge and skills of each secondary system for local operators. The course covers local operators' common role and responsibility, general activities under secondary normal condition, and measures mainly under secondary abnormal condition.

OJP Specialization Numbers

Higher Diploma Nuclear Technology

| | |
|----------------------|-----|
| Operator | 1XX |
| Mechanical | 2XX |
| Electrical | 3XX |
| Instrument & Control | 4XX |
| Chemistry | 5XX |
| Radiation Protection | 6XX |

Operator Specialization

AES-111 General Operation (5 CR)

This course provides skills and knowledge of NPP systems, operations including start up/shut down of equipments, heat up operation of the Reactor Coolant System (RCS), Reactor critical operation, Generator

synchronizing operation with grid, and power up/down operations safely by using plant procedures.

AES-112 Primary System Abnormal Operation (3 CR)

This course provides skills and knowledge of a Nuclear Power Plant to conduct plant operations from a unit control room in a safe, reliable, and professional manner so as to perform recovery operation of NPP safely from abnormal conditions to the normal operation condition, especially when primary system related abnormal situation occurs.

AES-113 Secondary System Abnormal Operation (3 CR)

This course provides skills and knowledge of a Nuclear Power Plant to conduct plant operations from a unit control room in a safe, reliable, and professional manner so as to perform recovery operation of NPP safely from abnormal conditions to the normal operation condition, especially, when secondary system related abnormal situation occurs.

AES-114 Emergency Operation (3 CR)

This course provides skills and knowledge of a Nuclear Power Plant to conduct plant operations from a unit control room in a safe, reliable, and professional manner so as to maintain NPP safety and to recover from emergency operation conditions to normal operation condition, especially when Reactor trip occurred by various Design Basis Accidents (DBA).

AES-115 Administration Procedures (1 CR)

This course provides knowledge of emergency response organization, radiation emergency plan and related administration procedures to perform proper actions, and duties in accordance with radiation emergency plan and associated procedures.

AES-121 Prerequisites Review(1 CR)

This course provides general knowledge and skills for working at a NPP including Industrial safety, Security program, Fire fighting, and administration procedures for Access control of radioactive areas.

AES-122 System Monitoring (3 CR)

This course provides knowledge and skills of monitoring various equipments of NPP including reading instruments, recording checking results, and identifying leakage source, radiation abnormal, and alarm of the local control panel.

AES-123 Equipment Operation I (4 CR)

This course provides knowledge and skills of equipments operation which is used for NPP like as several kinds of valves, small pumps, and Heating, Ventilation and Air Conditioning (HVAC) equipments including fans and heaters controlled by local control switch.

AES-124 Equipment Operation II (3 CR)

This course provides knowledge and skills of equipments operation which is used for NPP including various electrical breakers, uninterruptable power supplier (UPS) and also provides skills of diversified indication lamp change of local control panel or electrical switch.

AES-125 System Operation (4 CR)

This course provides knowledge and skills of basic operation of NPP likes as filling and air vents of systems or tanks, drain of the various fluid systems, line-up of the systems, warm up/cool down of the systems, and other basic operation activities according to the associated NPP operation procedures.

Mechanical Specialization

AES-211 Measurement (4CR)

This course provides basic concepts, theory and practical knowledge associated with measurements using a variety of measuring devices required for mechanical technician basic job qualification at NPP.

AES-212 Hand Tools (4CR)

This course provides basic concepts, theory and practical knowledge associated with hand tools usage required for mechanical technician basic job qualification at NPP.

AES-213 NPP Mechanical Drawing (4CR)

This course provides basic concepts, theory and practical knowledge associated with a variety of mechanical drawing reading and usage required for mechanical technician basic job qualification at NPP.

AES-214 Basic Mechanical Maintenance (3CR)

This course provides basic concepts, theory and practical knowledge associated with basic mechanical maintenance using a variety of devices required for mechanical technician basic job qualification at NPP.

AES-221 Valve Maintenance (4CR)

This course provides practical knowledge associated with valve maintenance required for valve maintenance job qualification.

AES-222 Centrifugal Pump Maintenance (4CR)

This course provides practical knowledge associated with single-stage centrifugal pump maintenance required for pump maintenance job qualification.

AES-223 Fan Maintenance (3CR)

This course provides practical knowledge associated with fan maintenance required for fan maintenance job qualification.

AES-224 Mechanical Preventive Maintenance (4CR)

This course provides basic concepts, theory and practical knowledge associated with preventive maintenance for mechanical using a variety of devices required for mechanical technician basic job qualification at NPP.

Electrical Specialization

AES-311 General Electrical Work (3 CR)

This course develops skills and knowledge in the basic concepts of measuring devices, hand-tools, and electrical print reading.

AES-312 Preventive Maintenance for Electrical System (4 CR)

This course provides comprehensive Preventive Maintenance (PM) task list for electrical systems of NPP, the execution of PM activities, and analysis skills of the PM data.

AES-313 MOV Maintenance (4 CR)

This course develops understanding of major functions and electrical parts of Motor Operated Valves. The course covers operation, adjustment, and preventive maintenance of Motor Operated Valves.

AES-314 Air Circuit Breaker (4 CR)

This course covers the structure for the Load Center of a NPP, the definition and function for Air Circuit Breakers (ACBs), the structures and components of ACBs, and operation and maintenance procedures.

AES-321 Motor Control Center (4 CR)

This course covers motor control fundamentals, control of motor starting, circuit troubleshooting, and maintenance of the Motor Control Center.

AES-322 Battery (3 CR)

This course provides basic knowledge of battery, battery charger, regulating transformer (TR), and the Uninterruptible Power Supply (UPS) system, operation and repair procedures, the execution of maintenance, and analysis of PM data for battery, battery charger, and regulating TR.

AES-323 Low Voltage Motor (4 CR)

This course provides basic knowledge and operation mechanism of cranes and hoists of NPP, operation and repair procedures for small cranes and hoists, the execution of maintenance for small cranes and hoists of NPP, and execution and analysis of surveillance/periodic tests for cranes and hoists of NPP.

AES-324 Vacuum Circuit Breaker (4 CR)

This course covers the structure of the switch gear of an NPP, definition and function for the Vacuum Circuit Breaker, structures and components of the Vacuum Circuit Breaker, and operation and maintenance of the Vacuum Circuit Breaker.

Instrumentation and Control Specialization**AES-411 I&C Work Preparation (4CR)**

This course provides basic concepts, theory and practical knowledge associated with NPP Instrumentation and Control (I&C) work preparation tasks required for I&C technician basic job qualification.

AES-412 Operating Test Equipment (3CR)

This course provides basic concepts, theory and practical knowledge associated with a variety of NPP test equipment required for I&C technician basic job qualification.

AES-413 I&C Preventive Maintenance (4CR)

This course provides basic concepts, theory and practical knowledge associated with NPP post-maintenance test for a variety of I&C components required for I&C technician basic job qualification.

AES-414 Tubing and Fitting (4CR)

This course provides basic concepts, theory and practical knowledge associated with NPP tubing and fittings tasks required for I&C technician basic job qualification.

AES-421 Inspection I&C Components (4CR)

This course provides practical knowledge associated with NPP I&C components inspection tasks including transmitter and converter, loop, indicator, sensor, recorder, and controller required for I&C technician general job qualification.

AES-422 I&C Adjustment and Calibration (3CR)

This course provides practical knowledge associated with NPP I&C component adjustment and calibration tasks including transmitter and converter, loop, indicator, sensor, recorder, and controller required for I&C technician general job qualification.

AES-423 I&C Replacement (4CR)

This course provides practical knowledge associated with NPP I&C component replacement tasks including transmitter and converter, loop, indicator, sensor, recorder, and controller required for I&C technician general job qualification.

AES-424 I&C Repair (4CR)

This course provides practical knowledge associated with I&C component repair task including transmitter, converter, loop, indicator, sensor, recording and controller required for I&C technician general job qualification.

Chemistry Specialization**AES-511 Analytical Chemistry(4 CR)**

This course provides knowledge and skills of laboratory safety, laboratory management, reagent management, dispensing scale, and chemical analysis method.

AES-512 Analytical Instrumentation(4 CR)

This course provides knowledge and skills of electromagnetic radiant ray equipment, ultraviolet (UV) spectrophotometer, atomic absorbing light analysis and light emitting analysis, chromatography, mass analysis, and electric conductivity method.

AES-513 Corrosion and Control (4 CR)

This course provides knowledge and skills of corrosion theory, prevention method, and comprehensive strategies of NPP's water chemistry.

AES-514 Water Treatment (3 CR)

This course covers NPP water treatment basic theory, equipment, systems, operation experience, and recent developments in NPP water treatment.

AES-521 Radiochemistry (4 CR)

This course covers the up-to-date knowledge of nuclear and radiochemistry background needed for radiation measurement and primary water chemistry.

AES-522 Radiation Measurement (3 CR)

This course deals with various radiation detectors used in a primary water chemistry laboratory. The top goal of this course is gamma ray spectrum analysis and assessment of radioactive materials in reactor coolant.

AES-523 Primary System Water Treatment (4 CR)

This course covers the technical basis for the coolant chemistry and chemistry strategy with various primary water chemistry control methods.

AES-524 Secondary System Water Treatment(4 CR)

This course covers basic theory of NPP secondary system water treatment, water management for the steam generator, secondary systems water treatment and operation experience, and new developments in NPP secondary system water treatment.

Radiation Protection Specialization**AES-611 General Radiation Protection (3CR)**

This course provides knowledge of overall radiation protection theory for conducting radiation protection technician field training.

AES-612 Radioactive Contamination Control (3CR)

This course provides understanding of **radioactive contamination control** procedures and techniques for controlling the spread of contamination to personnel and equipment.

AES-613 Radioactive Waste Management (3CR)

This course provides understanding of radioactive waste control and skills of transportation and storage of radioactive waste, management and control of radioactive waste building.

AES-614 Radioactive Waste Disposal (3CR)

This course provides understanding and skills of liquid radioactive waste disposal and gaseous radioactive waste disposal and solid radioactive waste disposal, spent resin dry system.

AES-615 Exposure Control (3CR)

This course provides understanding of exposure control procedures and As Low As Reasonably Achievable (ALARA) concept and how it is applied to the performance of radiological work at the plant (time, distance, shielding, engineering controls, and source reduction).

AES-621 Radiation Control Area Access Control (3CR)

This course provides understanding of plant access control procedures and techniques for controlled or restricted area (radiologically restricted area, radiation area, high radiation area, very high radiation area, and contaminated area).

AES-622 Radioactive Material Control (3CR)

This course provides understanding of radioactive material control procedures and techniques related to radioactive material and radioactive source control stored on site as well as understanding the role of radiological protection technicians in responding to radiological incidents and recognition of appropriate responses to radiological events.

AES-623 Radiological Survey (3CR)

This course provides understanding of radiological survey, analysis instruments procedures, usage of radiation detectors, and differentiation between the operating characteristics of a radiation field survey instrument and a radioactive contamination survey instrument.

AES-624 Radiological Analysis Instruments (3CR)

This course provides understanding and skills of radiation instrument maintenance, radiation instrument calibration, annual calibration planning, calibration certification issuance, and access control for radiation instrument calibration.

AES-625 Radiological Instruments (3CR)

This course provides understanding and skills of radiation monitoring system, alpha, beta, gamma nuclide analysis, radiation source control, measurement equipment, and access control for tool maintenance room.

AEROMECHANICAL TECHNOLOGY-Course Description

AME 1001 – Workshop Practice/Orientation (1,6,2-3)

The course provides students with knowledge and skills to perform basic technical operations, handle hand and power tools to be used in sheet metal work, riveting, filing, as well as applying measuring tools, select and adjust test equipment used on aircraft.

Pre-requisite: Admission to AD POLY

Co-requisite: None

AME 1064 - Materials and Hardware I (6A) (2,6,3-4)

This course introduces to the characteristics of ferrous, non-ferrous, non-metallic and composite material, describes the chemical structure, properties and application of sealant and bonding agents. States the difference between thermoplastics and thermosetting plastics; introduces to the procedures to manufacture wood and composite structure; describe properties and application of PrePregs.

Pre-requisite: None

Co-requisite: AME 1074

AME 1074 - Materials and Hardware II (6A) (2,6,3-4)

The course covers the fundamentals of corrosion, corrosion detection and corrosion treatment, defines types of aircraft fasteners like: bolts, studs and screws, locking devices and their application in aircraft technology; describe and apply the process of assembling aircraft parts.

Pre-requisite: None

Co-requisite: AME 1064

AME 1264 – Advanced Materials and Hardware I (6B1) (3,3,2-4)

This course is on Materials and Hardware used in aviation and covers an advanced level with emphasis placed on the characteristics and properties of ferrous, non-ferrous materials, composite material, sealants, bonding agents, thermoplastics and thermosetting plastics, types of corrosion and its repair procedures.

Pre-requisite: None

Co-requisite: None

AME 1284 – Advanced Aerodynamics (8B1) (4,3,3-5)

This course covers an advanced level with emphasis put on the International Standard Atmosphere (ISA), airflow around a body, boundary layer, laminar and turbulent airflow, generation of lift and drag, relationship between lift, drag, thrust and weight, glide ratio, influence of load factor, flight stability and dynamics.

Pre-requisite: PHY 1022
Co-requisite: None

AME 2003 – OJT in Maintenance Environment (A) (0,40,0 – 13)

The module provides the knowledge gained in previous modules within a hangar / operational aircraft environment. The aim is to familiarize the students with the procedures and facilities within a maintenance environment with emphasis on safety. It raises awareness on issues related to quality assurance, planning, record keeping, tool control, etc. It also exposes students to real time work experience, highlighting the demands of work patterns and human factor issues.

Pre-requisite: Second year student status
Co-requisite: None

AME 2071 - Maintenance Practices I – Safety Precautions and Testing (7A) (2,6,4-4)

This course covers safety precautions for aircraft and workshops, workshop practices, care and control of tools, dimensions, allowances and tolerances, standards of workmanship, calibration of tools and equipment.

Pre-requisite: AME 1074, AVSC 1093
Co-requisite: None

AME 2072 - Maintenance Practices II – Engineering Drawings (7A) (2,6,4-4)

This course provides an introduction to engineering drawings, diagrams and standards, ATA 100 specifications, common systems of fits and clearances, electrical cables and connectors, standard methods for checking shafts, bearings and other parts.

Pre-requisite: AME 2071
Co-requisite: None

AME 2174 - Maintenance Practices III – Electrical Cables and Connectors (7A) (1,6,1- 3)

This course provides fundamental knowledge of electrical cables and connectors, wiring protection techniques, bonding practices and testing.

Pre-requisite: AME 2072
Co-requisite: AME 2374

AME 2374 - Maintenance Practices IV – Aircraft Parts Joining and Inspection (7A) (1,6,1-3)

This course covers riveting techniques, pipes bending and hoses, springs, bearings and transmissions testing, and control cables adjustment. It also covers aircraft handling and storage, jacking, inspection, effects of environmental conditions on aircraft handling, aircraft repair and assembly techniques, trouble shooting, abnormal events, maintenance procedures.

Pre-requisite: AME 2072
Co-requisite: AME 2174

AME 2081 - Basic Aerodynamics (7A) (2,3,0-3)

The course provides basic aerodynamic knowledge, physics of the atmosphere, airflow around a body, forces acting on aircraft, and theory of flight, flight stability and dynamics.

Pre-requisite: None
Co-requisite: None

AME 2112 – Aircraft Structure and Systems I (11A) (1,3,1-2)

The course provides fundamentals of aero plane aerodynamics and flight controls, high speed flight, airframe structures, general Air Transportation Association (ATA) concepts of aircraft structures, fuselage, wings, stabilizers, flight control surfaces and air-conditioning.

Pre-requisite: AME 2081, AVN 1404
Co-requisite: None

AME 2114 – Aircraft Structure and Systems II (11A) (3,3,7-4)

The course provides fundamentals of aircraft systems related to instruments/avionics systems, electrical power, and other electronic and instrument systems.

Pre-requisite: AME 2112
Co-requisite: None

AME 2152 - Turbine Engines (15A) (2,3,3-3)

The course provides an introduction to the fundamentals of gas turbine engines, including turbo-prop, and turbo-shaft engines, explains the various components of a Gas Turbine engine and their working principles, inlet, compressors, combustion section, turbine section, exhaust, lubricants and fuels and related systems. Auxiliary components are also covered in this course.

Pre-requisite: None
Co-requisite: None

AME 2172 - Propellers (17A) (1,3,1-2)

The module provides fundamentals about propeller fundamentals, propeller construction, propeller pitch control, ice protection, maintenance, and propeller storage and preservation.

Pre-requisite: None
Co-requisite: None

AME 2214 – Advanced Aircraft Structures and Systems I (11B) (3,3,7-4)

The course provides fundamentals of aero plane aerodynamics, flight controls, and high speed flight.

Pre-requisite: AME 2872, AVN 2043
Co-requisite: None

AME 2261 -Advanced Materials and Hardware II (6B1) (3,3,1-4)

This course covers the various types of fasteners, and other aircraft parts such as pipes, unions, springs, bearings, transmissions. The course describes procedures related to manufacturing composite materials, interpret and understand drawings and describe the process of aircraft parts assembly.

Pre-requisite: AME 1264
Co-requisite: None

AME 2271 – Advanced Maintenance Practices I – Safety Precautions and Testing (7B1) (3,6,5-5)

This course covers safety precautions for aircraft and workshop, workshop practices, calibration of tools and calibration standards, operation, function and use of common avionic general testing equipment.

Pre-requisite: AME 1264, AVSC 1093
Co-requisite: AME 2261, AME 2471

AME 2471 - Advanced Maintenance Practices II – Engineering Drawings (7B1) (3,6,5-5)

This course covers an advanced level with emphasis put on engineering drawings, diagrams and standards, ATA 100 specifications, common systems of fits and clearances, standard methods for checking shafts, bearings and other parts.

Pre-requisite: AME 1264, AVSC 1093
Co-requisite: AME 2271, AME 2261

AME 2272 – Advanced Maintenance Practices III – Bonding Techniques and Testing (7B1) (2,6,2-4)

This course covers an advanced level with emphasis put on electrical cables and connectors, wiring protection techniques, bonding practices and testing, riveting, pipes and hoses, springs, bearings, transmissions and control cables.

Pre-requisite: AME 2271, AME 2471
Co-requisite: AME 2472, AME 2672, AME 2872

AME 2472 – Advanced Maintenance Practices IV – Welding, Brazing and Soldering (7B1) (2,6,2-4)

This course covers an advanced level with emphasis put on welding, soldering, brazing, calculations of aircraft weight and balance, and centre of gravity/balance limits.

Pre-requisite: AME 2271, AME 2471
Co-requisite: AME 2272, AME 2672, AME 2872

AME 2672 – Advanced Maintenance Practices V – Aircraft Handling and Storage (7B1) (2,6,2-4)

This course covers an advanced level with emphasis put on Aircraft handling and storage, jacking, inspection, effects of environmental conditions on aircraft handling, aircraft repair and assembly techniques, trouble shooting.

Pre-requisite: AME 2271, AME 2471

Co-requisite: AME 2272, AME 2472, AME 2872

AME 2872 – Advanced Maintenance Practices VI – Maintenance Procedures (7B1) (2,6,2- 4)

This course covers an advanced level with emphasis put on abnormal events such as lightning strikes, heavy landings and flight through turbulences, and maintenance planning, modification procedures, inspections, quality assurance and quality control.

Pre-requisite: AME 2271, AME 2471

Co-requisite: AME 2272, AME 2472, AME 2672

AME 2254 - Turbine Engine I (15B1) (3,6,8-5)

This course covers principles and operation of Gas Turbine Engines with an emphasis put on the relationship between force, work, power, energy and acceleration, engine performance. Also covered are the various components of a Gas Turbine engine and their working principles.

Pre-requisite: None

Co-requisite: None

AME 3003 – OJT / Internship in a Maintenance Environment (B) (0,40,0-13)

The module is designed to bring together all knowledge learnt in previous modules within a hangar/ operational aircraft environment. The aim is to familiarize the students with the procedures and facilities within a maintenance environment with particular emphasis on safety. It is intended to help raise awareness on issues related to quality assurance, planning, record keeping, tool control, etc. It also exposes students to real time work experience, highlighting the demands of work patterns and human factor issues.

Pre-requisite: Third year student status

Co-requisite: None

AME 3011 - Thermodynamics (3,1,2-3)

The course presents concepts to understand the fundamentals of thermodynamics and heat transfer amongst fluids. It enables the understanding the basics of heat transfer related to various aspects of conduction, convection and radiation.

Pre-requisite: PHY 1022

Co-requisite: None

AME 3211 Advanced Aircraft Structures and Systems II (11B) (3,3,6-4)

This course covers airframe construction, General Air Transportation Association (ATA) concepts of aircraft fuselage, wings, stabilizers, flight control surfaces and air-conditioning.

Pre-requisite: AME 2214

Co-requisite: None

AME 3212 Advanced Aircraft Structures and Systems III (11B) (3,3,6-4)

This course covers General Air Transportation Association (ATA) concepts of aircraft instruments/avionics systems, electrical power, and other electronic and instrument systems.

Pre-requisite: AME 3211

Co-requisite: None

AME 3214 Advanced Aircraft Structures and Systems IV (11B) (3,3,8-4)

This course covers General Air Transportation Association (ATA) concepts of aircraft fire protection systems, flight controls, fuel systems, hydraulic power, landing gear and On Board Maintenance Systems.

Pre-requisite: AME 3212

Co-requisite: None

AME 3251 - Turbine Engine II (15B1) (3,3,5-4)

This course emphasizes construction and working principles of inlet, compressors, combustion section, turbine section, exhaust, lubricants and fuels and related systems, engine indication, and power augmentation. Auxiliary components and accessories are also covered in this course.

Pre-requisite: AME 2254

Co-requisite: none

AME 3272 - Propellers (17B1) (3,3,4-4)

This course emphasizes blade element theory, propeller slip, torque, vibration and resonance, propeller pitch control, ice protection, maintenance, and propeller storage and preservation.

Pre-requisite: None

Co-requisite: None

AME 3213 – Aircraft Structures and Systems I (11B1) (2,6,6 – 4)

The course provides fundamentals of aero plane aerodynamics, flight controls, and high speed flight, airframe construction, General Air Transportation Association (ATA) concepts of aircraft fuselage, wings, stabilizers, flight control surfaces and air-conditioning systems.

Pre-requisite: None

Co-requisite: None

AME 3474 - Propellers (3,3,6 – 4)

This course emphasizes blade element theory, propeller slip, torque, vibration and resonance, propeller pitch control, ice protection, maintenance, and propeller storage and preservation.

Pre-requisite: None

Co-requisite: None

AME 3313 -Aircraft Structures and Systems II (11B) (3,6,3-5)

This course covers General Air Transportation Association (ATA) concepts of aircraft instruments/avionics systems, electrical power, and other electronic and instrumentation/indication systems. Also covered are aircraft fire protection systems, flight controls, fuel systems, hydraulic power, landing gear and On Board Maintenance Systems (OBMS).

Pre-requisite: AME 3012

Co-requisite: None

AME 3252 - Turbine Engines (15B1) (2,6,4-4)

This course covers principles and operation of Gas Turbine Engines with an emphasis put on the relationship between force, work, power, energy and acceleration, engine performance and the various components of a Gas Turbine engine and their working principles. This course also emphasizes construction and working principles of inlet, compressors, combustion section, turbine section, exhaust, lubricants and fuels and related systems, engine indication, and power augmentation. Auxiliary components and accessories are also covered in this course.

Pre-requisite: None

Co-requisite: None

AME 3261 - Materials and Hardware I (3,3,3-4)

This course introduces Materials and Hardware used in aviation and covers an advanced level with emphasis put on the characteristics and properties of ferrous, non-ferrous materials, composite material, sealants, bonding agents, thermoplastics and thermosetting plastics, types of corrosion and its repair procedures.

Pre-requisite: None

Co-requisite: None

AME 3262 - Materials and Hardware II (3,3,6-4)

This course covers the various types of fasteners, and other aircraft parts such as pipes, unions, springs, bearings, transmissions. The course describes procedures related to manufacturing composite materials, interpret and understand drawings and describe the process of aircraft parts assembly.

Pre-requisite: AME 3261

Co-requisite: None

AME 3273 – Maintenance Practices I (2,9,0-5)

This course covers safety precautions for aircraft and workshop, workshop practices, calibration of tools and calibration standards, operation, function and use of common avionic general testing equipment. This course emphasizes engineering drawings, diagrams and standards, ATA 100 specifications, common systems of fits and clearances, standard methods for checking shafts, bearings, as well as electrical cables and connectors, wiring protection techniques, bonding practices and testing, riveting, pipes and hoses, springs, bearings, transmissions and control cables.

Pre-requisite: AVSC 1093

Co-requisite: None

AME 3274 - Maintenance Practices II (2,9,2-5)

This course covers an emphasis put on welding, soldering, brazing, calculations of aircraft weight and balance, and centre of gravity/balance limits, aircraft handling and storage, jacking, inspection, effects of environmental conditions on aircraft handling, aircraft repair and assembly techniques, trouble shooting. This course puts emphasis on abnormal events such as lightning strikes, heavy landings and flight through turbulences, and maintenance planning, modification procedures, inspections, quality assurance and quality control.

Pre-requisite: AME 3273

Co-requisite: None

AIR TRAFFIC MANAGEMENT-Course Description

ATM 1114 - Aviation Law (4,0,6-4)

An introduction to aviation law. The module gives an introduction to national and international organizations, ATC licensing/certification and safety management /regulation. Rules and regulations are also examined in detail.

Prerequisites: None

Co-requisites: None

ATM 1124 Aircraft (3,0,6-3)

An introduction to the theory of flight and aircraft characteristics. The module presents the principles of flight, together with the operating principles of aircraft engines, systems and instruments; factors affecting aircraft performance are also explained.

Prerequisites: PHY 1022

Co-requisites: None

ATM 2014 ATM Project I (2,9,2-5)

This module provides students with the opportunity to show an appreciation of the information gained during the Basic (ICAO 051) course through the completion of an ATM-related project. Under the supervision of an instructor, students shall select and research a topic from a pre-determined list and produce a reasoned analysis of their work.

Prerequisites: Basic (ICAO 051) Course

Co-requisites: None

ATM 2131 Air Traffic Management (4,0,6-4)

Introduction to Air Traffic Management and its component parts, including the provision of Air Traffic Control, Flight Information and Advisory services. Students shall be introduced to the basic principles of radiotelephony, coordination, altimetry and level allocation.

Prerequisites: ATM 1114

Co-requisites: None

ATM 2141 Meteorology (3,0,5-3)

An introduction to meteorology. Students shall be introduced to the organization of the meteorological service, the atmosphere and atmospheric circulation, meteorological phenomena and the types of meteorological information available for aviation.

Prerequisites: None

Co-requisites: None

ATM 2151 Navigation (3,0,5-3)

An introduction to the purpose of navigation, as well as to the properties of the Earth. Students shall be introduced to the basic principles of navigation and the use of this knowledge in ATS operations.

Prerequisites: None

Co-requisites: None

ATM 2161 Equipment & Systems (4,0,5-4)

An introduction to equipment and systems. Radio theory and an introduction to RADAR comprise most of this course. Further topics discussed are automatic dependent surveillance, automation, and electronic communications. A brief lesson on working positions of an aerodrome, approach, and area controller are included.

Prerequisites: None

Co-requisites: None

ATM 2172 Human Factors (3,0,6-3)

An introduction to the human factors that affect performance, communication, teamwork, error, and the work environment of air traffic services personnel.

Prerequisites: None

Co-requisites: None

ATM 2182 Professional Environment (2,0,6-2)

Introduction to airports (civil or military), the surrounding environment and the essential areas that should be familiar to a student air traffic controller. Students shall recognise the need for close cooperation with other parties concerning ATM operations and aspects of environmental protection. Emphasis will be placed on the expectations and requirements of pilots.

Prerequisites: ATM 2131, ATM 2161.

Co-requisites: None

ATM 2214 Advanced Professional Environment (1,0,2-1)

An in-depth appreciation of contributors to ATS operations and their inter-relationship, including a Familiarisation visit to obtain an oversight of an operational unit.

Prerequisites: ATM 2182

Co-requisites: None

ATM 2224 Advanced Aviation Law (1,0,1-1)

An appreciation of the principles of ATC Licensing and Competence, together with an understanding and the application of ATS regulations.

Prerequisites: ATM 1114

Co-requisites: None

ATM 3044 ATM Project II (2,9,2-4)

This module provides students with the opportunity to show an appreciation of the information gained during the Tower (ICAO 052) and Radar (ICAO 054) courses, through the completion of an ATM-related project. Under the supervision of an instructor, students shall select and research a topic from a pre-determined list and produce a reasoned analysis of their work.

Prerequisites: ICAO 052; ICAO 054

Co-requisites: None

ATM 3202 Unusual/Degraded/Emergency Situations (2,3,3-4)

An in-depth appreciation of the types of unusual/degraded and emergency situations that might be encountered by a Tower controller in the course of his duties; and the actions to be taken in such an event. An appreciation of the ways in which pilots may be expected to react, is also covered.

Prerequisite: None

Co-requisite: ATM 3231, ATM3261, ATM 3282, ATM 3241

ATM 3231 Air Traffic Management – Tower (4,3,4-5)

An in-depth appreciation of all air traffic management subjects with particular respect to the provision of Aerodrome Control Service to both IFR and VFR aircraft; also the importance of maintaining the integrity operational environment.

Prerequisite: ATM 2131

Co-requisite: None

ATM 3241 Adv. Equipment & Systems (3,3,3-4)

An in-depth view of equipment and systems, covering voice communications, automation, controller working position and equipment limitations and degradation.

Prerequisites: ATM 2161

Co-requisites: None

ATM 3251 Aerodromes (1,0,1-1)

This module is designed to give students an understanding of the design and layout of aerodromes and associated technical aids and equipment required to operate a safe and efficient flow of air traffic on the ground and in the vicinity of an aerodrome

Prerequisites: None

Co-requisites: None

ATM 3261 Advanced Aircraft (1,0,1-1)

An in-depth appreciation of aircraft instruments, data and categories, combined with knowledge of factors affecting aircraft performance in various stages of flight.

Prerequisites: ATM 1124

Co-requisites: None

ATM 3271 Advanced Meteorology (1,0,1-1)

An in-depth appreciation of the impact of meteorological phenomena and adverse weather on ATS operations. In addition, an appreciation of how to obtain, decode, use and relay meteorological information

Prerequisites: ATM 2141

Co-requisites: None

ATM 3282 Advanced Navigation (1,0,2-1)

An in-depth appreciation of maps and aeronautical charts and their use; also an appreciation of the effect of precision, limitations and change of the operational status of navigational systems, on ATS operations

Prerequisites: ATM 2151

Co-requisites: None

ATM 3292 Advanced Human Factors (2,0,2-2)

An in-depth study and analysis of the human factors that affect personal and team performance in ATS operations, including medical and psychological factors, social and organisational factors, stress and human error.

Prerequisites: ATM 2172

Co-requisites: None

ATM 3312 Air Traffic Management – Radar (4,6,3-6)

An in-depth appreciation of all air traffic management subjects with particular respect to the provision of Radar Control Service to both IFR and VFR aircraft; also the importance of maintaining the integrity of the operational environment.

Prerequisites: ATM 2131

Co-requisites: None

ATM 3322 Unusual/Degraded/Emergency Situations - Radar (2,3,2-3)

An in-depth appreciation of the types of unusual/degraded and emergency situations that might be encountered by a Radar controller in the course of his duties; and the actions to be taken in such an event. An appreciation of the ways in which pilots may be expected to react, is also covered.

Prerequisites: None

Co-requisites: None

ATM 2003 On Job Training – (0,40,0-13)

This module is provided in the form of On-the-job Training (OJT) and is to be undertaken following successful completion of the BASIC course. Students will undergo a short period of classroom/simulator Training, prior to gaining practical experience working as an Air Traffic Control Assistant at an operational ATC unit.

Prerequisites: ICAO 051 theory course

Co-requisites: None

ATM 2024 Radiotelephony & Phraseology Lab (1,3,1-2)

Language Training for Air Traffic Control Trainees

Prerequisites: ICAO 051 course

Co-requisites: ATM 2003)

ATM 3033 On Job Training – (0,40,0-13)

This module is provided in the form of On-the-job Training (OJT) and is to be undertaken following successful completion of the Tower and Approach radar courses. Students will undergo a short period of classroom/simulator Training, prior to gaining practical experience working as a trainee Air Traffic Controller at an operational ATC unit.

Prerequisites: ICAO 052 course, ICAO 054 course.

Co-requisites: None

AVIATION SCIENCE-Course Description

AVSC 1001 - IT Applications (0,6,2-2)

The course provides advanced knowledge in information technology applications, understand operations related to various short-cuts and keys that are not frequently used, overview of file management, word processing, templates, spreadsheets, databases and electronic communications, able to prepare power-point slides and presentations.

Pre-requisite: None

Co-requisite: None

AVSC 1093 - Human Factors (3,0,4-3)

The course presents concepts to avoid human errors by considering human factors, human performance and limitations, social psychology and by studying of the various factors that play a key role in causing accidents.

Pre-requisite: None

Co-requisite: None

AVSC 1103 - Aviation Legislation (3,0,5-3)

The course provides understanding and overview of the aviation maintenance regulatory framework, understand the EASA part 66 and part 145, JAR-OPS and Part M regulations, aircraft certification, approved maintenance organizations, licensing procedures as well as applicable national and international requirements.

Pre-requisite: None

Co-requisite: None

AVSC 3314 - Engineering Project (3,4,9-4)

This module provides concepts and aspects to understand how to use and apply tools of proper research mechanisms, enable assessment of other vital characteristics such as team work, leadership, punctuality and professionalism.

Pre-requisite: Third year student status.

Co-requisite: None

AVSC 3402 - Engineering Business Management (3,0,1-3)

The course presents concepts and skills related to basic management, basic principles of management such as planning, organizing, coordinating and their important role in an effective organization, the importance of leadership, role-model and other virtues are covered in this module.

Pre-requisite: Third year student status

Co-requisite: None

AVSC 3411 - Quality Assurance (3,0,2-3)

The course provides fundamental knowledge of the various regulations with regards to aircraft quality assurance procedures, entities that will help to manage aviation quality assurance processes, including procedures in the

aviation regulatory framework such as aircraft documentation, checks required at various stages, precautionary methods in place, control and feedback mechanisms.

Pre-requisite: None

Co-requisite: None

AVSC 3004 Technology Project Management (3,0,2-3)

This course provides the tools necessary for developing a project plan with goals and objectives and identifying tasks, time frames, and resources that will achieve these goals. Also covered is the management of the implementation of the project identifying performance indicators as continuous monitoring operations or controls that ensure accurate information on relative to the plan.

Pre-requisite: None

Co-requisite: None

AVIONICS TECHNOLOGY-Course Description

AVN 1232 - Electrical Engineering I (3B) (3,3,9-4)

This course covers the basic principles of electricity like: electron theory, static electricity and conduction, electrical terminology, generation of electricity, DC sources of electricity, and DC theory.

Pre-requisite: MATHS 1011, PHY 1021

Co-requisite: None

AVN 1233 - Electrical Engineering II (3B) (3,3,3-4)

This course is a continuation of Electrical Fundamentals I and covers an advanced level with emphasis put to electrical terms such as resistance, power, capacitance, magnetism, inductance, AC theory, resistive, capacitive and inductive circuits, and transformers, filters, AC generators and motors.

Pre-requisite: AVN 1232

Co-requisite: None

AVN 1234 – Electrical Engineering III (3B) (1,3,4-2)

This course covers the applications of electrical engineering I and II as related to aviation topics.

Pre-requisite: AVN 1233

Co-requisite: None

AVN 1404 Electronics (2,3,3-3)

This course covers electronic fundamentals with emphasis on semiconductors such as the diode and the transistor. A fundamental characteristics, properties and uses of these devices are discussed. A brief into to integrated circuits, printed circuit board technology, and servo mechanisms are also covered.

Pre-requisite: AVN 1233

Co-requisite: None

AVN 2003 – OJT in Maintenance Environment (A) (0,40,0 – 13)

Required On the Job Training under the supervision of a faculty member at a Part 145 licensed establishment.

Pre-requisite: Second year student status

Co-requisite: None

AVN 2043 - Electronic I (4B1) (3,6,5-5)

This course introduces two basic electronic semiconductor devices, the diode and the transistor. Various diode types and their applications and various transistors types and applications are discussed. Types of diodes covered include the PN junction, Zener, Schottky with applications extended to rectifier circuits. BJTs and MOSFETs and their applications are also covered.

Pre-requisite: AVN 1234

Co-requisite: None

AVN 2044 - Electronics II (4B2) (3,6,6-5)

This course builds on top of AVN 2043 Electronics I by addressing Integrated Circuits (ICs) and applications with

emphasis on operational amplifiers and their applications. Printed circuit boards (PCB's) and servo mechanisms are also covered.

Pre-requisite: AVN 2043

Co-requisite: None

AVN 2051 – Fundamentals of Digital Techniques (5A) (2,3,8-3)

The course covers the electronic instrument systems, basic computer structure and electrostatic sensitive devices, typical systems arrangements and cockpit layout of electronic instrument systems, computer terminology, special handling of components sensitive to electrostatic discharges.

Pre-requisite: AVN 1404

Co-requisite: None

AVN 2053 - Digital Techniques I (5B1) (1,3,2-2)

This course covers an advanced level of digital systems with emphasis put on electronic instrument systems, numbering systems, data buses and data conversion.

Pre-requisite: AVN 1234

Co-requisite: AVN 2253

AVN 2253 - Digital Techniques II (5B1) (2,6,2-4)

This course is a continuation of Digital Techniques I covering an advanced level with emphasis put on logic circuits, computer technology as applied in aircraft, microprocessors, fiber optics, electronic displays, electrostatic sensitive devices, software management control, electromagnetic environment, and typical electronic/digital aircraft systems layout.

Pre-requisite: AVN 1234

Co-requisite: AVN 2053

AVN 2254 – Digital Techniques III (5B2) (3,6,6-5)

This course covers materials required for avionics specialization as an in depth continuation to the materials covered Digital Techniques I and II. Covered topics include digital Radar systems, and other digital navigation and communications systems.

Pre-requisite: AVN 1234, AVN 2253

Co-requisite: None

AVN 3043 Electronic Communication Techniques (2,3,3-3)

This course covers the basic principles of electronic communication techniques and radio principles. AM, FM and other modulation techniques are discussed and the principles of a super-heterodyne receiver are learned.

Pre-requisite: AVN 1404

Co-requisite: None

AVN 3142 – Propulsion and FADEC (14B2) (3,3,2-4)

The course introduces to the constructional arrangement and operation of turbojet, turbofan, turbo shaft, and turbo prop engines, electronic engine control and fuel metering system (FADEC), and covers engine indication systems, their components and their principles of operation.

Pre-requisite: AVN 2044, AVN 1234

Co-requisite: None

AVN 3223 - Avionics I (13 B2) (2,6,6-4)

This is the first course in a series of two of a condensed version of Module 13-Cat B2. This course covers flight theory, general concepts of aero-structures, auto-flight principles, comm. And nav. Systems, and Electrical power generation and regulations.

Pre-requisite: AVN 3252

Co-requisite: None

AVN 3224 - Avionics II (13B2) (3,6,3-5)

This course is a second in a series of two of a condensed version of Module 13-Cat B2. This course covers Flight

controls, instruments systems, lighting and on board maintenance systems.

Pre-requisite: AVN 3253

Co-requisite: None

AVN 3231 – Avionic Systems I (13B2) (3,9,12-6)

This course introduces theory of flight and its controls to include rolling, pitching, and yaw controls, general concepts of airframe structures are also covered to prepare students for an understanding of control instrumentation as flight aids. The course also covers auto flight control systems. also covered are electronic communication systems, wave propagation principles, transmission lines, radio principles, and modulation techniques.

Pre-requisite: AVN 2254, AVN 2044

Co-requisite: None

AVN 3232 – Avionic Systems II (13B2) (3,3,8-4)

This course covers primary and secondary radar systems, communication and navigation systems such as VHF, VOR, DME, MLS, GPS, FDS, and INS. Also covered are practical installations and data busses.

Pre-requisite: AVN 3231

Co-requisite: None

AVN 3234 – Avionic Systems III (13B2) (3,6,5-5)

This course completes the sequence by covering aircraft electrical power systems, to include AC, DC and emergency power systems sources. Equipment and furnishings, flight controls, instrument, lighting, and onboard maintenance systems.

Pre-requisite: AVN 3232

Co-requisite: None

AVN 3003 – OJT/Internship (0,40,0-13)

Required On the Job Training under the supervision of a faculty member at a Part 145 licensed establishment.

Pre-requisite: Third year student status

Co-requisite: None

AVN 3252 – A/C Digital Techniques I (5B1) (3,6,1-5)

This course covers an advanced level of digital systems with emphasis put on electronic instrument systems, numbering systems, data buses and data conversion with emphasis put on logic circuits, computer technology as applied in aircraft, microprocessors, fiber optics, electronic displays, electrostatic sensitive devices, software management control, electromagnetic environment, and typical electronic/digital aircraft systems layout.

Pre-requisite: AVN 1234

Co-requisite: None

AVN 3253 – A/C Digital Techniques II (5B2) (3,3,1-4)

This course covers materials required for avionics specialization as an in depth continuation to the materials covered Digital Techniques I and II. Covered topics include digital Radar systems, and other digital navigation and communications systems.

Pre-requisite: AVN 1234, AVN 3252

Co-requisite: None

Electromechanical Engineering Technology (EMT)

EMT-011 Technology Familiarization (2 CR)

This course provides students with an overview of mechatronics, instrumentation and control technology, an exposure to tools and equipment, and an understanding of basic electromechanical technology.

Practical Training 4 hrs/wk.

EMS-013 Introduction to Programming (3 CR)

This course introduces the concepts and applications of programming to students with no prior programming experience. Students will learn programming concepts such as variables, loops, conditional statements, functions and libraries. Students will create graphics, manipulate data, and utilize external program libraries.

Lecture 2 hrs/wk, Lab 6 hrs/wk, Tutorial 2 hrs/wk.

EMT-014 Tools of Quality Control (3 CR)

This course introduces the basic concepts of quality and basic techniques in quality engineering. Topics include measurement system analysis, control charts, acceptance sampling, statistical process control, six sigma, process improvement, process capabilities analysis, standards, and audit processes.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

EMT-031 Hydraulic Systems (3 CR)

This course covers basic training in hydraulic control technology and knowledge regarding the physical fundamentals of hydraulics and the function and use of hydraulic equipment.

Lecture 1hr/wk, Prac Training 4 hrs/wk, Tut 2 hrs/wk.

EMT-032 Pneumatic Systems (3 CR)

This course covers basic training in pneumatic control technology and knowledge regarding the physical fundamentals of pneumatics and the function and use of pneumatic equipment.

Lecture 1hr/wk, Prac Training 4 hrs/wk, Tut 2 hrs/wk.

EMT-033 Automation Technology (4 CR)

This course covers stepper motor and DC servo motor operations and characteristics, PID controller, speed and position control of DC servo motor, robot configurations, robot motion and programming, robot actuators, use of robots in industry, and robot safety considerations.

Lecture 1hr/wk, Prac Training 6hrs/wk, Tut 2 hrs/wk.

EMT-052 Planning and Control of Processes (3 CR)

This course provides an understanding of the concept of capacity planning and the use of software tools in the effective operations management of a manufacturing environment. Topics include master production scheduling, materials requirement planning, capacity planning, and production activity control.

Lecture 3 hrs/wk, Tutorial 6 hrs/wk.

EMT-061 Graduation Project I (3CR)

The project work is performed in the center of excellence. Students in a group (2-4 students each group) will Model, design, integrate and run an electromechanical system.

Lecture 10 hrs/wk, Tutorial 2 hrs/wk.

EMT-062 Graduation Project II (2 CR)

This course provides guidelines for the students to write, present, and defend their findings in their graduation project work in EMT-061. Each group of students (defined in EMT-061) will write a report about project I and the work performed during OJT. Each group will prepare a poster before the examination week. The poster together with fabricated wafer in project I and report will be displayed on a day selected during examination week.

Laboratory 5 hrs/wk, Tutorial 2 hrs/wk.

On-the-Job Training

The following EMT courses are implemented by industrial training providers.

Specialization Numbers***Higher Diploma Electromechanical Engineering Technology***

| | |
|--------------|-----|
| Mechatronics | 1XX |
| Mechanical | 2XX |

| | |
|-----------------------------|-----|
| Instrumentation and Control | 3XX |
| Electrical | 4XX |

EMT-081 Intro to On-the-Job Training (2 CR)

This course will train students in basic site-specific environmental health and safety, provide beginners-level knowledge of Factory Systems, and introduce and orient students to the industrial site, their mentors, and colleagues.

6 days; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

EMT-X11 Master Checklist (4 CR)

This course will train students in comprehensive knowledge of common policies and procedures in the module and knowledge to move independently within the module.

1 month; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

EMT-X12 Factory Systems (4 CR)

This course will train students in knowledge of factory systems software and of associated processes (how to move wafer with software).

1 month; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

EMT-X13 Machine Operation and Maintenance I (5 CR)

This course will train a student to independently process products on the tool, accomplish simple troubleshooting processes, and evaluate tool warning signs and react accordingly.

1 month; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

EMT-X14 Production Line Operation and Maintenance II (5 CR)

This course is a continuation of Tool Operation and Maintenance I to further train a student to independently process products on the tool, accomplish simple troubleshooting processes, and evaluate tool warning signs and react accordingly.

1 month; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

EMT-X15 Integrated Mechatronics Systems Operation and Maintenance III (5 CR)

This course is a continuation of Tool Operation and Maintenance II to further train a student to independently process products on the tool, accomplish simple troubleshooting processes, and evaluate tool warning signs and react accordingly. If time permits, new tools may be introduced.

1 month; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

EMT-X16 Metrology and Quality Assurance (5 CR)

This course will train a student to independently process a tool-test run for qualification and to issue an analysis. The student will also understand how to evaluate the results of an analysis and to draw conclusions (such as if the tool is ready for production or not).

1 month; Lec 1 hr/wk, Training 6 hrs/wk, Tut 1 hr/wk.

Engineering Fundamentals (ENG)

ENG-011 Industrial Safety and Professional Ethics (2 CR)

This course provides principles and practices of accident prevention, analysis of accident causes, mechanical/electrical/chemical/radiation safeguards, fire prevention, housekeeping, occupational diseases, first aid, protection equipment, general safety principles and promotion, and moral responsibilities to society.

Lecture 2 hrs/wk, Tutorial 1 hr/wk.

ENG-012 Schematics and Mechanical Diagrams (3 CR)

This course covers interpretation of basic shop drawings, conventional symbols, common electrical and electronic symbols, wiring diagrams, hydraulic and pneumatic symbols, schematic drawings, and piping diagrams.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-020 Engineering Mechanics (2 CR)

Force and moment vectors, resultants. Principles of statics and free-body diagrams. Applications to simple trusses, frames, and machines. Properties of areas, second moments. Internal forces in beams. Laws of friction. Principles of particle dynamics. Mechanical systems and rigid-body dynamics. Kinematics and dynamics of plane systems. Energy and momentum of 2-D bodies and systems. This course develops the fundamentals of engineering mechanics and problem solving skills essential for Petroleum engineering. Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-021 Mechanical Workshop (2 CR)

This course provides mechanical shop safety procedures, bench work, hand tools, precision measuring instruments, drill press, and manual and machined mechanical processes. Laboratory 6 hrs/wk.

ENG-022 Mechanical Technology I (3CR)

This course provides basic operation of valves, pumps, heat exchangers, steam traps, filters and strainers, air compressors, and refrigeration machines. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-023 Mechanical Technology II (3 CR)

This course provides basic operation of heating, ventilation, air conditioning, lubrication principles, steam turbines, and diesel engines. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-024 Thermodynamics (3CR)

This course covers thermodynamics properties and units, energy forms and balances, steam production and uses, thermodynamic processes, and thermodynamic cycles. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-025 Heat Transfer and Fluid Flow (3CR)

This course covers fluid static and dynamic operation, heat transfer and heat exchangers, thermal hydraulic principles, and thermal hydraulic limitations. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-031 Electrical Workshop (2 CR)

This course provides electrical shop safety procedures, measurement and evaluation of electrical components, devices, and circuits, power distribution circuits and wiring, enclosures, and printed circuit board development. Laboratory 6 hrs/wk.

ENG-032 Electrical Technology I (3 CR)

This course provides basic electrical theory, voltage production, basic DC theory and circuits, DC circuit inductance and capacitance, DC generators, DC motors, batteries and current converters. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-033 Electrical Technology II (3 CR)

This course provides basic AC theory, basic AC reactive components, three phase power, AC generators and transformer, and AC motors. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-034 Electronic Circuits (3CR)

This course covers basic electronic devices, operation, and their applications including diodes, FET transistors, BJT transistors, MOS transistors, and Op-Amps. Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-035 Digital Electronics (3CR)

This course explores the basic building blocks of digital electronic circuits. The topics covered include number systems and codes, logic gates, Boolean algebra, combinational logic circuits, flip-flops, one-shots, actable multi-vibrators, counters and registers, and integrated circuit logic families..

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-041 Instrumentation and Control I (3 CR)

This course provides basic concepts of instrumentation and control, temperature sensors and detectors, pressure sensors and detectors, level sensors and detectors, and flow sensors and detectors.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-042 Instrumentation and Control II (3 CR)

This course provides concepts of process control, valve actuators and position indicators, miscellaneous sensors and detectors, chemistry instrumentation, and radiation detectors.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ENG-099 Engineering Graphics (2 CR)

This course includes exploration of lines and planes as they relate to orthographic projection to show the size and shape of objects. It includes application of principles and graphic elements of sectioning to show interior detail; the techniques involved in creating oblique projections, axonometric projections, and perspective drawings; and the dimensioning techniques and symbol usage common to all drafting disciplines.

Lecture 1 hrs/wk, Tutorial 2 hrs/wk.

ENGLISH-*Course Description*

ENGL 1001 - English Composition I (3,0,2-3)

Students in this course should set a goal to become better writers. To achieve this, we will read closely and write frequently. We will talk about what professionals do in their writing to make it more readable and appealing.

Pre-requisite: Admissions to AD POLY

Co-requisite: None

ENGL 1002 - English Composition II (3,0,2-3)

Basic writing ability in English requires the writing of a short research paper, using materials provided during the examination. The student's writing is evaluated on the basis of grammatical correctness, clarity of expression, and appropriate use of research materials.

Pre-requisite: ENGL 1001

Co-requisite: None

ENGL 1003 – Introduction to Aviation (3,0,2-3)

The course covers a range of topics in aviation history and theories, including aircraft knowledge, aircraft components and instruments, theory of flight, turbulence, cartography, ATC rules and procedures, radar theory, navigation theory, flight plans, ATC communications, weather hazards and alerting services.

Pre-requisite: None

Co-requisite: None

ENGL 1004 - Technical Writing (3,0,2-3)

The main focus is to write a technical report that is due at the end of the quarter. The course is aimed at developing skills needed to produce a technical report. The course begins in order with writing a resume, application letter or a cover letter, a plan for a technical report or a proposal or outline of a report, short technical papers with headings, lists, graphics, and special notices—not, and finally a technical report addressing a technical issue clearly to an appropriate audience.

Pre-requisite: ENGL 1002

Co-requisite: None

ENGL 2004 - Technical Presentation (3,0,2-3)

This course is designed to teach anyone to deliver a technical presentation through the use of more visual aids,

like graphs, charts, and other data. This course teaches the student to how to better display your ideas to those who may not be familiar with your area of expertise.

Pre-requisite: ENGL 1004

Co-requisite: None

FLIGHTLINE MAINTENANCE-Course Description

FLM 1013 – General Safety, Human Factors, Fire Protection and Control (2,6,2-4)

The course provides an understanding and practical skills of personal and workshop safety, evaluating incidents attributable to human factors and human errors, human performance and limitations, social psychology, environmental influences, errors and their effects on human performance, determine fire classes, decide measures of fire fighting, and handle aircraft fire extinguishing equipment,

Pre-requisite: None

Co-requisite: None

FLM 1023 - Workshop Practices, Quality Assurance and GSE Maintenance (2,6,3-4)

The course provides understanding and practical skills to operate hand and power tools, interpret engineering drawings, apply methods of joining aircraft structural members, introduces to regulations related to aircraft quality assurance and quality control procedures, enables to operate and maintain aircraft Ground Support Equipment (GSE) such as hydraulic test benches, ground power units, stairs, ladders, and aircraft towing bars, carry out minor fault diagnosis and defect rectification such as leaks, and loose connections.

Pre-requisite: None.

Co-requisite: None

FLM 1033 – Aircraft Electric and Hydraulic/Pneumatic Power Generation (2,6,2-4)

The course provides a basic overview of aircraft electrical equipment, the generation of different types of current (AC/DC) and their control, safety precautions while handling with electrical or hydraulic power, aircraft electrical power management, types of batteries, charging, loads, systems maintenance, principles of hydraulic and pneumatic aircraft systems, including components such as valves, motors, high pressure and low pressure systems, related power generation and control.

Pre-requisite: None

Co-requisite: None

FLM 1044 – Fundamentals of Turbine and Piston Engines (2,6,2-4)

The course provides basic knowledge of gas turbines and piston engines and their principles of operation, introduces to the various types of engine components and accessories like: fuel system, hydraulic system, lubrication system, starting system, ignition systems, indication systems, and fire-protection system.

Pre-requisite: None

Co-requisite: None

FLM 1054 - Aircraft Fuel & Lubricants and Electrical Ground Power Supply (2,6,3-4)

The course covers the various types of fuels and lubricants used in aviation, identification, properties, calorific values and uses, aspects related to storage, handling and required safety precautions. The course provides a basic overview of aircraft electrical ground supply units, and their basic principles of operation, introduces to aircraft ground power management, aircraft electrical distribution systems, aircraft lighting systems, batteries, Ground Power Units (GPUs), and safety precautions.

Pre-requisite: None

Co-requisite: None

FLM 1064 - Flight Line Operations, Aircraft Documentation (2,6,2-4)

The course provides knowledge and practical experience in aircraft handling and flight line operations like: aircraft taxiing, towing, marshalling, parking and mooring, jacking, tire mounting, flight line inspections, operational testing and troubleshooting as well as consumables replenishment. The course introduces to the various aircraft maintenance documents and applied maintenance procedures. It covers the range of aircraft related documentation such as aircraft log books, manuals, SI, STI, amendments, IPC, and explains how the respective forms have to be

filled in.
Pre-requisite: None
Co-requisite: None

Humanities (HUM)

HUM-001 Study Skills (2 CR)

This course introduces some of the basic study skills needed for success at college level in technical areas.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-011 English for Technical Careers (2 CR)

This course helps students to read critically, make inferences, draw conclusions, and detect relationships between generalizations and supporting details. This course focuses on four language skills and components to develop the students' oral and written communicative skills.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-012 Technical Communications I (2 CR)

This course helps the students discover and develop proficient writing skills through the process of starting, composing, revising, and editing.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-013 Technical Communications II (2 CR)

This course helps students develop techniques to improve clarity of writing and raise proficiency in reporting technical contents.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-021 Foreign Culture I (2 CR)

This course provides an introductory level to learning Asian, European, American, and other cultures and languages appropriate for program-specific industries.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-022 Foreign Culture II (2 CR)

This course provides an advanced level to learning the cultures and languages from HUM-021.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-031 English for IT Professionals I (2 CR)

The overall objective of the course is to develop student capabilities and skills in English language communications (both written and oral) with focus on English skills for information technology disciplines.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-032 English for IT Professionals II (2 CR)

The overall objective of the course is to build on a previous course to further enable the IT students to understand English written texts and to speak related to their fields of study. Also, it provides communication and language training that will prepare Internationally Educated IT professionals and ensure success.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

HUM-041 Islamic Civilization (3 CR)

This course examines the history of Islam and the issues arising from a changing world. Aspects related to political, economic, social, and cultural history of Islamic Civilization from the prophet and beyond. Students will be introduced to the complexities involved in the attempts to integrate Islamic religious and cultural beliefs.
Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

HUM-042 Middle East Studies (3 CR)

This course defines the term Middle East geographically and politically. The course discusses the current and most important political, economic, and social changes in the Middle East. The course covers the historical interaction between the Middle East and the neighboring civilizations.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

Information Technology and Security Fundamentals

ICT-011 Computer Hardware and Software Essentials (3CR)

This course provides an introduction to the Information Technology industry and interactive exposure to personal computers, hardware, and operating systems. Students participate in hands-on activities and lab-based learning to become familiar with various hardware and software components and discover best practices in maintenance and safety.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorials 2 hrs/wk.

ICT-012 Introduction to Programming (3CR)

The Introduction to Programming course is designed for students who have no programming knowledge and experience. The goal of this course is to get students familiar with programming concepts and constructs at a relatively slow pace. Furthermore, this course is designed to help students in gaining programming skills and to use a number of special educational tools and systems. This course focuses on Java programming language and environment as a tool to meet the course objectives.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorials 2 hrs/wk.

ICT-021 Programming in Java I (3 CR)

This course endures the "Introduction to Programming - " course and builds on previous programming experience and knowledge by studying the course "Programming in Java I". This course emphasizes on developing students programming skills and assures that students are capable of configuring and controlling the Java programming platform.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorials: 2 hrs/wk.

ICT-022 Introduction to Web Programming (3 CR)

This course is designed to teach beginners how to program for the Web in HTML5. By completing the course students will not only acquire some IT skills much needed in the present job market, but also gain some essential insights of computer programming to get ready for later computing and World Wide Web courses. This course is basically focused on the foundation of developing a web page using basic technologies and solutions.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorials 2 hrs/wk.

ICT-023 Computing Ethics

The overall objective of this course is to introduce different aspects of the IT-profession and their ethical law. This course discusses the up-to-date international standards of the IT-Ethics and professionalisms according to IT-society and community standards.

Lecture 2 hrs/wk, Tutorials 2 hrs/wk.

ICT-031 Programming in Java II(3 CR)

This course is focused on embracing different programming skills for students. However, this course covers how to create Java technology applications that leverage the object-oriented features of the Java language, such as encapsulation, inheritance, and polymorphism.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ICT-032 Web Programming I(3CR)

This course endures the introduction to web programming course offered during the second quarter. This course aims on introducing how to format and style of Web pages with CSS, JavaScript fundamentals, Arrays, Loops, conditional statements and functions, Programming with Objects in JavaScript, Create special effects with JavaScript, Working with Windows and Frames, Handling forms, regular expressions, and cookies in JavaScript, Capturing and handling events in JavaScript, Create dynamic Web content and style using JavaScript.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ICT-033 Computer Architecture and Organization (3CR)

The purpose of this course is to provide students with a basic understanding of how computers do what they do. Students are expected to use these programs to get the computer to perform particular tasks. This course will introduce the mechanism in which the computer is capable to understand the language of software program/code, and the stages in which software program is carried out (i.e. memory, cash, registers, etc.).

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ICT-034 Database Management Systems

This course introduces the basics of database systems, as well as the modeling, design and manipulation of relational databases. The students will gain the required knowledge to describe databases, their characteristics, functions, pros and cons. Topics include data modeling, database design theory, data definition and manipulation languages, storage and indexing techniques, etc. The course will enable the students to create and manipulate databases on Oracle database management system.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

ICT-041 Web Programming II (3CR)

The Web Programming II course is intended to elevate students' level with HTML5 to build more powerful web solutions and advance to dynamic, database-enabled, website/Intranet programming and applications using the popular PHP language. Topics to be covered shall include the fundamentals of web programming in PHP, client-server solutions and databases.

Lecture 2 hrs/wk, Lab 3hrs/wk, Tutorial 2 hrs/wk.

ICT-042 Data Structure & Algorithm Design (3CR)

This course is an introduction to the concepts of Abstract Data Structures such as Arrays, Queues, Stacks, Heaps, Linked Lists, Maps and Trees. Data structures are implemented in the software development process, through accompanying algorithms, in order to develop efficient, robust and creative software. Introduction to Algorithm analysis, designing of algorithms, measuring algorithms runtime, and their correctness, search structure, sorting, and graphs.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorials 2 hrs/wk.

ICT-043 Introduction to Software Development (3CR)

This course introduces the fundamental, logical, and design considerations addressed during system and application software development. It provides a background in applications software development and engineering techniques through a combination of theory and application.

Lecture 3 hrs/wk, Lab 1 hrs/wk, Tutorial 2 hrs/wk.

ICT-044 Introduction to Computer Networks Security(3CR)

This course examines principles, design, implementation, and performance of computer networks. A focus will be placed on basics as well as rapid advances in this pivotal area. Topics include: Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, peer-to-peer networking, and network security.

Lecture 3 hrs/wk, Lab 1 hr /wk, Tutorial 2 hrs/wk.

ICT-045 Operating Systems Security

The course aims to introduce Operating System Concepts with emphasis on foundations and design security principles. This course covers and traces the evolutionary history of Operating Systems and introduces, concepts of Batch processing, Multiprogramming and Timesharing, structures and functions of operating systems, the different components of operating system like Process Management, Concurrency mechanisms, Deadlock handling, Memory Management techniques, Virtual Memory, File System and Secondary Storage Management, Security and protection etc.

Lecture 3hrs/wk, Lab 1 hrs/wk, Tutorial 2 hrs/wk.

Revision Date:

5
September 2013

TBD

Pre-requisite: None

Co-requisite: None

i The numbers in the parenthesis refer to lecture periods, practical periods, tutorial periods and quarter calendar credit hours respectively.

" Elective course

Mathematics and Sciences (MAS)

MAS-011 Mathematics I (3 CR)

This course covers arithmetic functions, elementary algebra, rational and quadratic equations, linear and quadratic functions, logarithmic and exponential functions, and application of scientific and engineering notation.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

MATH 1011 - Mathematics I (1B) (3,0,3-3)

The course covers arithmetic terms and signs, methods of multiplication and division, fractions and decimals. It also deals with conversion factors, elementary algebra and basic geometry.

Pre-requisite: Admission to AD POLY

Co-requisite: None

MAS-012 Mathematics II (3 CR)

This course is a continuation of Mathematics I with emphasis on analyzing data by means of functions and graphs and statistical analysis and interpretation of results.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

MAS-013 Applied Technical Mathematics (3 CR)

This course is an extension of Mathematics I and II emphasizing mathematical modeling of real-world applications such as the creation and interpretation of graphs and control charts.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

MATH 1012 - Mathematics II (1B) (3,0,3-3)

This course is a continuation of Mathematics I covering an advanced level with emphasis put in algebra on linear equations and their solution. In geometry emphasis is put on graphical presentations and simple trigonometrically relationship, use of tables, and rectangular and polar coordinates.

Pre-requisite: MATH 1011

Co-requisite: None

MATH 2004 Advanced Technical Mathematics (3,0,3-3)

This course covers topics that are deemed pertinent to technology. It continues with coverage of trigonometry, complex numbers, matrices, polynomials and rational functions, basic statistics, analytic geometry, differential and integral calculus with applications, partial derivatives and double integrals, series, and differential equations. This course can be used as an elective.

Pre-requisite: MATH 1012

Co-requisite: None

MAS-021 Physics I (3 CR)

This course provides the fundamental concepts on momentum, energy, work, power, and the laws of motion and conservation.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

PHY 1021- Physics I (2B) (3,0,4-3)

The course provides the fundamentals of physics such as: nature of matter, structure of atoms, chemical compounds, and elements states. The course also provides the fundamentals of physics related to forces, moments and couples, movement, rotational movement, inertia, work and energy.

Pre-requisite: Admission to AD Poly

Co-requisite: None

MAS-022 Physics II (3 CR)

This course is a continuation of Physics I with an emphasis on performing calculations involving mechanical

systems (such as simple machines including functions of individual components such as levers, gears, cams and pulleys) and lubrication principles.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

PHY 1022 – Physics II (2B) (3,0,4-3)

This course is a continuation of Physics I (2B) covering an advanced level with emphasis put in the higher levels of Statics, Kinetics and Dynamics with more insight into forces, inertia, work and energy, fluid dynamics, thermodynamics, optics, and wave motion and sound.

Pre-requisite: PHY 1021

Co-requisite: None

PHY 1033 – Engineering Mechanics (3,0,3-3)

This course introduces the fundamentals of engineering statics and dynamics applied to structures. An understanding of coplanar concurrent forces and moment of inertia to stationary and moving objects to develop working skills in mechanics is covered.

Pre-requisite: PHY 1022

Co-requisite: None

MAS-023 Nuclear Science (3 CR)

This course covers the fundamentals of atomic structure, mass defect, and binding energy; nuclear interactions and reactions; cross-sections; neutron activation; half-life determination; isotope identification methods; ionization (Bremsstrahlung, ionization and excitation); radiation interactions with matter (pair production, Compton scattering, photoelectric effect); and, neutron interactions (elastic and inelastic scattering, charged particle emission, fission, radioactive capture).

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

MAS-024 Electronic Physics (3 CR)

This course presents various concepts related to electronic technology. It covers atomic physics, general material science, semiconductor materials, the physics of p-n junctions, MOS capacitors, MOSFETs and BJTs.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

MAS-025 Introduction to Computer Electronics (3CR)

This course is designed to provide students with the basics of the electronic for information and communication technology students. The course is designed to provide a practical - hands on - introduction to electronics with a focus on measurement and signals. No prior experience with electronics is necessary. The course will integrate demonstrations and laboratory examples with lectures on the foundations.

Lectures: 2 hrs/w, Tutorial: 2 hrs/w; Lab: 2 hrs/w.

MAS-031 Chemistry I (3 CR)

This course provides the basic fundamentals of chemistry including solution chemistry, physical states, and nomenclature with a focus on water chemistry including effects of impurities, ion exchange, water treatment, and corrosion.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

MAS-032 Chemistry II (3 CR)

This course is a continuation of Chemistry I with an emphasis on water chemistry fundamentals, sources and types of impurities, control/removal of impurities, effects of impurities, the use of hydrogen gas in oxygen control, radical production and recombination, and radiochemistry.

Lecture 2 hrs/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

MAS-041 Computer Essentials (2 CR)

This course covers basic computer commands and provides computer skills such as trouble-shooting and trend analysis, and their application as related to industrial operation requirements.

Lecture 1 hr/wk, Lab 2 hrs/wk, Tutorial 2 hrs/wk.

Secure Software Development Specialization

SSD-110 Secure Database Development I (2CR)

This course introduces oracle database systems. This course focuses on training student to efficiently develop the database using the SQL* and the PL/SQL. By completing this course student shall be able to successfully obtain the *Oracle Certified Associate (OCA)* certificate.

Lecture 1 hrs/wk, Lab 2 hrs/wk, Tutorials 2 hrs/wk.

SSD-111 Practical Requirements Engineering (3 CR)

This course focuses on the importance of requirements engineering process to successful software development projects. Furthermore, this course demonstrates the requirements process during the software development life cycle. Solicit requirements from stakeholders, write and maintain a usable requirements specification. Requirements prioritization and packaged for different releases of software systems.

Lecture 3 hrs/wk, Tutorials 3 hrs/wk.

SSD-112 Secure Web Programming (3 CR)

This course focuses on developing large scale, dynamic and secure web applications using the PHP programming language and features. This course is a preparation stage for the *"PHP - Zend Certificate"*. During this course students are obligated to develop professional dynamic websites.

Lecture 1 hrs, Lab 3hrs, Tutorials 2 hrs/wk.

SSD-113 Secure Java Programming (3CR)

This course focuses on preparing students for the Sun Microsystems exam certificates. By completing this course student shall be able to successfully obtain the *"Oracle Certified Java Associate (SCJA)"* qualification certificate.

Lecture 1 hrs/wk, Lab 3 hrs/wk, Tutorial 2 hrs/wk.

SSD-114 Fundamental of C++ Programming (3CR)

C++ is a widely used programming language for application development. The course introduces C++ syntax and functions not found in the traditional C. The fundamental concepts of the object oriented paradigm are introduced and object oriented programming is stressed in place of traditional structured programming. Object arrays, pointers to objects, and linked lists of objects are the focus of the class.

Lecture 2 hrs/wk. Lab 2 hrs/wk, Tutorial 2 hrs/wk.

SSD-115 Information Systems Security (3CR)

The overall objectives of this course to elevate students' knowledge and professionalism by understanding the major concepts and fundamentals in the information systems security.

Lecture 2 hrs/wk, Tutorials 2 hrs/wk., Lab 2 hrs/wk.

SSD-120 E-Commerce (3 CR)

The overall objective of this course to introduce different applications of Electronic Commerce. Furthermore, this course elaborates on the importance of Security in designing and developing these applications.

Lecture 3hrs/wk, Tutorials 2 hrs/wk.

SSD-121 Secure Mobile Applications Development (3CR)

This course introduces mobile platform as for software applications development. This course covers basic level of mobile applications development using the Java as a programming language. This course is a preparation stage for the *"J2ME"*.

Lecture 1hrs/wk, Lab 3hrs/wk, Tutorials 2 hrs/wk.

SSD-122 System Analysis and Design (3CR)

This course introduces established and evolving methodologies for the analysis, design, and development of an information system. Emphasis is placed on system characteristics, managing projects, prototyping, CASE/OOM tools, and systems development life cycle phases. Upon completion, students should be able to analyze a problem and design an appropriate solution using a combination of tools and techniques.

Lecture 2 hrs/wk, Lab 1hrs/wk, Tutorial 2 hrs/wk.

SSD-124 Secure Database Development II (3CR)

This course endures the afore offered course "Database Development I" learning objectives. However, this course covers developing database forms and reports using Oracle technology and solutions. This course is a preparation stage for the "Oracle Certified Professional" - OCP.

Lecture 1 hrs/wk, Lab 3hrs/wk, Tutorials 2 hrs/wk.,

SSD-130 Desktop Software Applications Development (in-House) (3 CR)

The overall objectives of this course to build on students' knowledge and professional maturity in developing desktop software applications.

SSD-131 Secure Web Application Development (in-House) (3 CR)

The overall objectives of this course to build on students' knowledge and professional maturity in developing secure web-based systems.

SSD-132 Secure Mobile Applications Development (in-House) (3 CR)

The overall objectives of this course to build on students' knowledge and professional maturity in developing software applications for mobile devices.

SSD-133 Secure Database Development II (In-House) (3CR)

The overall objectives of this course to build on students' knowledge and professional maturity in developing database software applications using SQL/ PL SQL/ Forms builders and Report Builders.

SSD-134 Software Project Management (in-House) (3 CR)

The overall objectives of this course to elevate students capability to successfully design a project plan for a software development project.

SSD-135 Human-Computer Interaction (In-House) (3CR)

The overall objectives of this course to elevate students' capability to design and implement a user-friendly secure software application.

SSD140 Secure Software Design and Implementation (In House) (3CR)

The overall objectives of this course to build on students' knowledge and professional maturity in designing and developing secure desktop software applications.

SSD141 Web Applications Security (In House) (3 CR)

The overall objectives of this course to build on students' knowledge and professional maturity in designing and developing secure web-based systems.

SSD142 Ethical Hacking (in House) (3CR)

This course introduces the concepts and issues related to securing information systems and the development of policies to implement information security controls. Topics include the historical view of networking and security, security issues, trends, security resources, and the role of policy, people, and processes in information security. Upon completion, students should be able to identify information security risks, create an information security policy, and identify processes to implement and enforce policy.

SSD-143 Database Security (in-House) (3CR)

The overall objectives of this course to build on students' knowledge and professional maturity in designing and developing secure database software applications using SQL/ PL SQL/ Forms builders and Report Builders.

SSD144 Mobile Applications Security (in House) (3 CR)

The overall objectives of this course to build on students' knowledge and professional maturity in designing and developing secure software applications for mobile devices.

SSD-210 Web Infrastructure and Security Architecture (3 CR)

This course focuses on embracing the different requirements and their influence on identifying the infrastructure requirements and develops secure and large scale architecture for web applications. This course uses E-Commerce web applications, social networks as an example to explore security threats, importance of attaining dependable web applications.

Lecture 2 hrs/wk, Tutorials 2 hrs/wk, Lab 2 hrs/wk.

SSD-211 Object Oriented Analysis and Design (3CR)

In this course, the students will learn how to produce detailed object models and designs from system requirements; use the modeling concepts provided by UML; identify use cases and expand into full behavioral designs; expand the analysis into a design ready for implementation and construct designs that are reliable.

Lecture 3 hrs/wk, Tutorials 2 hrs/wk.

SSD-212 Advanced Secure Mobile Applications Development (3CR)

In this course, students are introduced to additional features, programming skills, and projects on mobile software applications development using the J2ME technology.

Lecture 1 hrs/wk, Labs 4 hrs/wk, Tutorial 2hr /wk.

SSD-213 Software Verification and Validation (3 CR)

The overall objective of this course is to develop student's knowledge and professionalism to develop software system that meets customers' requirements according to processes best practices, standards and procedures.

Lecture 3hrs/wk, Tutorial 2 hrs/wk.

SSD-214 Embedded Systems Secure Development I (3CR)

In this course, the fundamentals of embedded system hardware and firmware design and implementation will be explored. Issues such as embedded processor selection, hardware/firmware partitioning, glue logic, circuit design, circuit layout, circuit debugging, development tools, firmware architecture, firmware design. The architecture and instruction set of the microcontroller will be also presented.

Lecture 1hrs/wk, Tutorial 2 hrs/wk, Lab 3hrs/wk.

SSD-215 Graduation Project (1CR)

The overall course objective is to develop students' creativity, design, and team work skills.

SSD-240 Software Quality Assurance and Management (3CR)

The overall objectives of this course are focused on introducing basic concepts, models, and approaches to achieve quality to software applications.

Lecture 3hrs/wk, Tutorial 2 hrs/wk.

SSD-241 Embedded Systems Secure Development II (3 CR)

This course is continuum from the afore offered course Embedded Systems Development I. The overall objective of this course is to build on student's skills and knowledge to develop software applications for embedded (real-time) systems.

Lecture 1hrs/wk, Tutorial 2 hrs/wk, Lab 4 hrs/wk.

SSD242 Selected Topics in Software Engineering (3 CR)

The course offers participants with advanced topics in software engineering that is related to new technology, solutions, models, and approaches.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 3hrs/wk.

SSD243 Graduation Project II (2 CR)

The course will build on student's maturity and professionalism to develop software applications project. This course enables students to implement their theoretical and practical knowledge gained from training and course throughout their studies in this field to develop their software development project.

Lecture 1hrs/wk, Tutorial 2 hrs/wk, Lab 3hrs/wk.

SSD244 Penetration and Vulnerability Testing (3CR)

This course content revolves around series of exercises based on "hacking" into a network (penetration testing the network) and then defending against the hacks with special emphasis on software application security. This hands-on course focusing on hacking techniques, exploit techniques, vulnerability assessment and penetrating testing techniques to build countermeasures. Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSD-215 Graduation Project (1CR)

The overall course objective is to develop students' creativity, design, and team work skills.

SSD- 310 Information Security Risk Management (3CR)

This course gives students guidance on planning and implementing a risk assessment and protecting business information. The course introduces students to the international code of practice for an information security management system (ISMS) ISO27002.

SSD- 311 Security Planning and Incident Handling (3CR)

The overall objectives of this course help student understand contingency planning and its components. This includes the role of policies and procedures as well as risk assessment, business impact analysis, incident reporting and response and business resumption planning.

SSD- 312 Information Assurance & Security Management (3CR)

This course provides students a systematic and practical approach for establishing, managing and operating a comprehensive Information Assurance program. The course provides students with an understanding of the essential issues required to develop and apply a targeted information security posture to both public and private corporations and government run agencies.

SSD- 313 Enterprise Software Architecture & Design (3CR)

This course is an introduction to Enterprise Architecture (EA), it is designed to be the first exposure to foundational enterprise architecture (EA) concepts and practices.

SSD- 314 Information Security Economics (3CR)

This course will introduce students with advanced knowledge about the challenges and current practices in security decision making. Student possesses thorough knowledge in financial models and security metrics. During the course students will apply his/her knowledge in financial models to support security decision making.

SSD- 315 Advanced Web Application Security (2CR)

The course will introduce web application security threats, such as hackers, masqueraders, information spoofing, sniffing, and distribution of damaging software, the associated security risks, and prevention/detection/response techniques.

SSD- 320 Information Warfare (3CR)

This course presents the relationships and interdependencies of business and national objectives, of companies and countries, and of their dependence on advances in technology. This course shows how the dependencies on advanced computing and information technologies can lead to a weak security weaknesses.

SSD- 321 Advanced Cryptology (3CR)

This course covers advanced topics in Cryptology including: classical cryptography, modern methods of public and private key encryption, authentication and digital signatures, hashing, and passwords, Number theory, abstract algebra, combinatorics, and complexity theory necessary for the design and analysis of advanced cryptographic systems.

SSD- 322 Security Policy Design & Implementation (3CR)

This course examines the concepts underlying security policy design, implementation, and management. It addresses the steps in security model design, data classification, threats and vulnerabilities,

quantitative and qualitative risk analysis, evaluating countermeasures, and the standards to ensure confidentiality, integrity, and availability.

SSD- 323 Info Security Governance & Compliance (3CR)

This course provides a detailed knowledge of IT Governance principles and procedures, and the basic concepts of the ISO 27001 / ISO 27002 standard. The student possesses thorough knowledge about the overall process for establishment and maintenance of an Information Security Management Systems.

SSD- 324 Ethics, Law and Policy in Cyberspace (3CR)

This course builds on topics covered in previous course (ICT-035 computing ethics). The course provides an overview of the ethical challenges faced by individuals and organizations in the information age and introduces the complex and dynamic state of law as it applies to behavior in cyberspace.

SSD- 325 Critical Software Security Controls & Standards (2CR)

This course will demonstrate the techniques and tools needed to implement and audit the critical security controls. It helps students master specific, proven techniques and tools needed to implement and audit the Twenty Critical Security Controls.

SSD- 330 Malware Analysis: Tools and Techniques (3CR)

This course will utilize key tools and techniques for malware analysis and examine malicious programs. Students will learn how to explore Windows malware in two phases: Behavioral analysis focuses on the program's interactions with its environment, such as the registry, the network and the file system.

SSD- 331 Organizational and Human Aspects of Information Security (3CR)

This course will give students insight into corporate organizations and policies, and how the security is embedded into organization, processes and corporate documentation framework. The course also gives practical awareness and the ability to plan a corporate awareness campaign.

SSD- 332 Security as Continuous Improvement (3CR)

This course covers the quality improvement paradox in security and quality improvement processes. It will also cover how to ensure the improvement of the performance of computer security incident Response teams (CSIRTs).

SSD- 333 Socio-technical Security Risk Modeling and Analysis (2CR)

In this course gives introduction to Systems Thinking and Socio-technical modeling and analysis, Technology Adoption and Security, Overview of the Information security landscape, How to conduct a socio-technical security and risk assessment of a organization or business, and Strategic.

SSD- 334 Elective Course (3CR)

This course will offer participants advanced topics in software development and security, which is related to new technology, solutions, models, and approaches. The objective is to help students explore advancement, state-of-the-art technology, solutions, methods, processes, and approaches in order to cope with technology evolution.

SSD- 335 Software Security Trends(3CR)

The course will explain the current software security challenges, well-known vulnerabilities, attack methods, secure software engineering principles, and strategies to avoid vulnerabilities.

SSD- 340 Field Training III(9CR)

This course shall be conducted collaboratively with AD Polytechnic Industrial partner. Content of this course shall meet state-of-the-art and state-of-the-practice technology and training modules.

Network and Cyber Security Specialization

NCS-110 Routing and Switching I (3 CR)

Document:
Document No:

AD Poly Catalogue

Page No:
111

Revision No:
Revision Date:

5
September 2013

This course develop student abilities in routing and switching fundamentals of computer networks to achieve certain performance goals and to define routing criteria including addressing and schema that may affect system performance. Topics include LAN/WAN, Protocol Hierarchies, OSI Reference Model, TCP/IP reference Mode, IP Addressing, Address Resolution Protocol, ARP cache, ARP on same network, ARP on different networks, ARP protocol format.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-111 Secure Network Design I (3 CR)

This course builds student skills required to comprehend LAN design and analysis, implementation of routing protocols, WAN technologies and telecommunications industry standards with special emphasis on Cisco equipment and protocols. Design a LAN solution detailing structured cabling components, desktop and server hardware, network operating systems, and network administration tools. VLANs, Interval Routing, Wireless AP Configuration, Enterprise Security, Network Troubleshooting.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-112 Network Security I (3 CR)

This course will cover the essential issues in computer (digital) and network security. Topics include: viruses, Internet worms, computer crime, web server security, denial of service attacks, authentication protocols, firewalls, Trojan horses, intrusion detection, data encryption methods, public key cryptography (RSA, DES), email viruses, attachments, spyware, digital homeland security.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-113 Wireless Networks (3 CR)

This course addresses the fundamentals of wireless networking, including architectures, protocols, and standards. It describes concepts, technology and applications of wireless networking as used in current and next-generation wireless networks.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-114 Storage Networking I (2 CR)

This course develops student capabilities in information storage system environment: information storage, evolution of storage technology and architecture, Data Center Infrastructure, key challenges in managing Information. Additional topics include basics of Storage technology, storage systems architecture, network storage, storage area networks, information availability, securing the storage infrastructure.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 1 hrs/wk.

NCS-115 Internet and Cyber Security (3 CR)

The objective of this course is to cover attacks and threats in Internet and cyber space. The student will be introduced to network mapping, port scanning, sniffing, Does, Dodos, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. Other topics covered include certification authorities, digital signatures and message integrity. In addition, secure networking protocols, including PGP, SSL, and IPsec are also covered.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-120 Routing and Switching II (3 CR)

This course is a continuation of Routing and switching I with focus on Cisco Advanced Routing and LAN Switching focused on the ability to sell, design, install, and support the core infrastructure of a Cisco solution for small and medium-sized businesses. Knowledge of building, configuring, and troubleshooting campus networks and remote access networks.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-121 Secure Network Design II (3 CR)

This course is a continuation of network design I with emphasis designing networks like LAN, WAN, and broadband access leading to Cisco CCDA certification. This course discusses the design and implementation of network systems such as Ethernet switches and Internet routers. The network development life cycle. Network analysis and design methodology. Network design issues: Manageability; Node placement and sizing; Link topology and sizing; Routing; Reliability. Data in support of network design. Structured enterprise network design. Hierarchical tree network design.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-122 Network Security II (3 CR)

This course is a continuation of network security I with emphasis on developing skills required for CCNA Security certification leading to CCNP Security certification. This certification validates skills including installation, troubleshooting and monitoring of network devices to maintain integrity, confidentiality and availability of data and devices and develops competency in the technologies that Cisco uses in its security structure.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-123 Wireless Networks Security (3 CR)

The course will focus on the security and privacy issues associated with wireless networks. Various attacks against wireless networks and their defense strategies will be analyzed including satellite, terrestrial microwave, and military tactical communications, and public safety, cellular and wireless LAN networks. A CCNA Wireless certification will validate student ability to configure, implement and support wireless LANs using Cisco equipment.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-124 Storage Networking II (2 CR)

This course is a continuation of storage networking I with focus on putting into practice advanced Storage Networking Solutions (e.g. Cisco). It develops advanced concepts in Storage Area Networks (SAN) including building blocks, architecture; protocols and mechanisms; and the different Standardization Bodies and Industry Organizations concerned with SAN.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 1 hrs/wk.

NCS-125 Ethical Hacking and Digital Forensics (2 CR)

The course develops student skills about the integrity of the network infrastructure. A Certified Ethical Hacker is a skilled professional who understands and knows how to look for the weaknesses and vulnerabilities in target systems and uses the same knowledge and tools as a malicious hacker. Topics include ethical Hacking and Computer Crime, Scanning Networks, System Hacking, Hacking Webservers and Web Applications, Hacking Wireless Networks, Evading IDS, Firewalls, Digital Forensics.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-130 Routing and Switching I [In-House Training-Phase I] (3 CR)

The course builds on practical knowledge of students to select and implement routing and switching of computer networks and what would be the best routing protocols and switching fabrics to achieve certain performance using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-131 Secure Network Design I [In-House Training – Phase I] (3 CR)

The course focuses on LAN design and analysis, implementation of routing protocols, WAN technologies and telecommunications industry standards with special emphasis on Cisco equipment and protocols using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-132 Network Security I [In-House Training – Phase I] (3 CR)

The course builds on practical knowledge of students to pertaining to essential issues in computer (digital) and network security. Topics include: viruses, Internet worms, computer crime, web server security, denial of service attacks, authentication protocols, firewalls, Trojan horses, intrusion detection, data encryption methods, digital homeland security using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-133 Wireless Networking Design [In-House Training – Phase I] (3 CR)

The course builds on practical knowledge of students to the fundamentals of wireless networking, including architectures, protocols, and standards. It describes concepts, technology and applications of wireless networking as used in current and next-generation wireless networks using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-134 Storage Networking I [In-House Training – Phase I] (2 CR)

The course builds on practical knowledge of students on Information Storage System Environment: Information Storage, Evolution of Storage Technology and Architecture, Data Center Infrastructure, Key Challenges in Managing Information using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-135 Applied Cryptography [In-House Training – Phase I] (3 CR)

The course provides to students the necessary conceptual background and hands-on experience to understand the most common modern cryptographic algorithms and protocols and how to use them to secure distributed applications and computer networks.

In- House Practical Training and Evaluation.

NCS-140 Routing and Switching II [In-House Training [Phase 2] (3 CR)

The course builds on practical knowledge of students to develop Cisco advanced Routing and LAN Switching with focus on the ability to design, install, and support the core infrastructure of a Cisco solution for small and medium-sized businesses. Knowledge of building, configuring, and troubleshooting campus networks and remote access networks using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-141 Secure Network Design II [In-House Training [Phase 2] (3 CR)

The course builds on practical knowledge in designing networks like LAN, WAN, and broadband access leading to Cisco CCDA certification. This course discusses the design and implementation of network systems such as Ethernet switches and Internet routers, Network analysis and design methodology, Node placement and sizing; Link topology and sizing; Routing; Reliability using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-142 Network Security II [In-House Training [Phase 2] (3 CR)

The course builds on practical knowledge of students skills leading to CCNP Security certification. This certification validates skills including installation, troubleshooting and monitoring of network devices to maintain integrity, confidentiality and availability of data and devices and develops competency in the technologies that Cisco uses in its security structure using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-143 Wireless Networks Security [In-House Training-Phase 2] (3 CR)

The course builds on practical knowledge of security and privacy issues associated with wireless networks leading to Cisco CCNA Security certification. Various attacks against wireless networks and their defense strategies will be demonstrated on cellular and wireless LAN networks. A CCNA Wireless certification will validate students' ability to configure, implement and support wireless LANs using Cisco equipment using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-144 Storage Networking II [In-House Training Phase 2] (2 CR)

The course builds on practical knowledge of putting into practice Advanced Cisco Storage Networking Solutions. The course will demonstrate different network storage solutions using training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

NCS-145 Ethical Hacking and Digital Forensics [In-House Training-2] (3 CR)

The course builds on practical knowledge of ethical hacking procedures and best practices. The course will prepare students for acquiring a world class certification on ethical hacking, which validates student abilities to hack into different types of information systems and find security breaches in a safe manner. The course also provides hands-on on computer crime investigation.

In- House Practical Training and Evaluation.

NCS-210 Advanced Routing and Switching (3 CR)

The course covers advanced topics in routing and switching leading to CCNP certification that allows students to manage today's complex networks while keeping key applications secure and performing efficiently. Topics include advanced Routing and Switching for complex system, lifecycle Services for

Routing and Switching, Cisco Wide Area Application Services, and building Scalable Cisco Internetworks.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-211 Cloud Computing Security (3 CR)

This course covers cloud computing, cloud architecture and service models, the economics and benefits of cloud computing, horizontal/vertical scaling, thin client, multimedia content distribution, multiprocessor and virtualization, distributed storage, security in cloud computing, disaster recovery, free cloud services and open source software, and example commercial cloud services.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-212 Advanced Network Security (2 CR)

The course focuses on building the requirements for the Cisco CCNP Security certification. Holders of such certificate will be responsible for security in routers, switches, networking devices, and appliances. Skills validated in the course include choosing, deploying, supporting, and troubleshooting Firewalls, VPNs, and IDS/IPS solutions for their networking environments.

Lecture 1 hrs/wk, Tutorial 2 hrs/wk, Lab 3 hrs/wk.

NCS-213 Advanced Wireless Networks Security (2 CR)

The course covers principles, advances, and challenges of next generation wireless networks. This course exposes students to a wide variety of optimization problems in the design and operation of wireless networks. Topics include Medium Access Alternatives, Security and Privacy, Wireless wans: Third and fourth Generation Systems, Ima standard, Wireless MANs, Ad-hoc Routing and Sensor networks. The course leads to CCNP Wireless certification.

Lecture 1 hrs/wk, Tutorial 2 hrs/wk, Lab 3 hrs/wk.

NCS-214 Graduation Project I (1 CR)

The overall course objective is to develop students' creativity, design, and team work skills in pursuing a modern topic in network and cyber security issues.

NCS-215 Threats, Vulnerabilities, and Risk Analysis (3 CR)

The overall course objective is to develop students' skills in being able to identify and analyze common types of threats, vulnerabilities, and risks and their impact on the network performance. The course will also present how to develop countermeasures for such threats.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-221 Field Training I (9 CR)

This course shall be conducted collaboratively with AD Polytechnic Industrial partner. Content of this course shall meet state-of-the-art and state-of-the-practice technology and training modules. The overall objective of this course aims on developing students' knowledge and practices to develop secure networking and web space.

11 weeks; Training Modules based on Industrial partner schedule.

NCS-231 Field Training II (9 CR)

Training Modules based on Industrial partner schedule This course is a continuation of Field training I with focus on building more job skills in the specialization of study.

11 weeks; Training Modules based on Industrial partner schedule.

NCS-240 Security Architectures and Models(3 CR)

The course covers the broad domain of security architecture and models, access control systems and methodology, laws, investigation, and legal ethics. The course will also demonstrate advanced Internetworking concepts, and security and administration. The course will serve as a prerequisite to the CISSP certification

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-241 Mobile Networks Security (2 CR)

The course presents advanced topics in security solutions for wireless and mobile networks including security issues, challenges and solutions. It also outlines the security mechanisms which protect applications downloaded by mobile devices. The course will also provide solid foundation for developing

secure mobile applications on Android mobile devices with emphasis on basics of mobile application security analysis and design.

Lecture 1 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-242 Firewall and Intrusion Analysis (3 CR)

The course focuses on network firewall security. It will cover installation and configuration techniques, and discuss how to make an intelligent choice of firewall technology and present basic firewall troubleshooting. Moreover, it will cover different intrusion detection systems and their signatures.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-243 Graduation Project II (2 CR)

The course is a continuation of Graduation Project I. Student will continue working on delivering creative, team work solution for the problem identified in the previous phase of the project.

Lecture 1 hrs/wk, Tutorial 2 hrs/wk, Lab 3 hrs/wk.

NCS-244 Selected Topics in Network Security (3 CR)

This course will offer participants advanced topics in network security and cyber security, which is related to new technology, solutions, models, and approaches. The objective is to help students explore advancement, state-of-the-art technology, solutions, methods, processes, and approaches in order to cope with technology evolution.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-310 Privacy in a Networked World (3 CR)

This course will use hacking techniques used by malicious, black hat hackers as a means to learn best defense from these same hackers the course is an in-depth study using hands-on lab exercises.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-312 Advanced Mobile Device Security (3 CR)

This course provides guiding principles for how to best design and develop Mobile apps with security in mind. It explores concepts that can be used to secure apps and how developers can use and incorporate these security features into their apps.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-313 Network Perimeter Protection (3 CR)

This course covers network security and cryptographic protocols. Network vulnerabilities, attacks on TCP/IP, network monitoring, security at the link, network and transport layers. Network related physical security, risk management and disaster recovery/contingency planning issues and housekeeping procedures.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-314 Advanced Cryptology (3 CR)

This course covers advanced topics in Cryptology including: classical cryptography, modern methods of public and private key encryption, authentication and digital signatures, hashing, and passwords, Number theory, abstract algebra, combinatorics, and complexity theory necessary for the design and analysis of advanced cryptographic systems.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-315 Information Assurance & Security Management (3 CR)

This course provides students a systematic and practical approach for establishing, managing and operating a comprehensive Information Assurance program. The course provides students with an understanding of the essential issues required to develop and apply a targeted information security posture to both public and private corporations and government run agencies.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-320 Virtualization and Private Cloud Security (3 CR)

Cloud computing is a relatively new phenomenon that provides for distributed computing and data storage capabilities. This course will look at current research results in cloud security in order to identify opportunities for continued research in this field.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-321 Advanced Web Application Security (3 CR)

The course will introduce web application security threats, such as hackers, masqueraders, information spoofing, sniffing, and distribution of damaging software, the associated security risks, and prevention/detection/response techniques.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-322 Information Warfare (3 CR)

This course presents the relationships and interdependencies of business and national objectives, of companies and countries, and of their dependence on advances in technology. This course underscores how hostile countries, business competitors, terrorists, hacktivists and others are waging Information Warfare (IW) against their adversaries.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-323 Systems Embedded Security (3 CR)

The course will cover the topics of making embedded systems reliable, safe, and secure. The course will cover a study of the system architectures, operating systems and hypervisors, networking, storage, and cryptographic issues that must be considered when designing secure embedded systems.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-324 Info Security Governance & Compliance (3 CR)

This course provides a detailed knowledge of IT Governance principles and procedures, and the basic concepts of the ISO 27001 / ISO 27002 standard. The student possesses thorough knowledge about the overall process for establishment and maintenance of an Information Security Management Systems.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-325 Malware Analysis: Tools and Techniques (3 CR)

This course lays the groundwork for malware analysis by presenting the key tools and techniques malware analysts use to examine malicious programs. Students will learn how to save time by exploring Windows malware in two phases.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-330 Firewall and Intrusion Analysis (3 CR)

The objective of this course is to provide the knowledge students need to effectively implement an information security (InfoSec) program, businesses must follow a security policy and management best practices.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-331 Advanced Penetration Testing, Exploits, & Ethical Hacking (3 CR)

This course focuses on network and information systems security from an offensive point of view. Students will learn technical testing and examination techniques used to identify, validate and assess technical vulnerabilities within an enterprise.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS- 332 Ethics, Law and Policy in Cyberspace (CR)

This course builds on topics covered in previous course (ICT-035 computing ethics). The course provides an overview of the ethical challenges faced by individuals and organizations in the information age and introduces the complex and dynamic state of law as it applies to behavior in cyberspace.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-333 Security Planning and Incident Handling(2 CR)

The overall objectives of this course help student understand contingency planning and its components. This includes the role of policies and procedures as well as risk assessment, business impact analysis, incident reporting and response and business resumption planning.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-334 Elective Course (2 CR)

This course will offer participants advanced topics in network and cyber security, which is related to new technology, solutions, models, and approaches. The objective is to help students explore advancement, state-of-the-art technology, solutions, methods, processes, and approaches in order to cope with technology evolution.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-335 Network Security Trends (2 CR)

Students who will complete this course are expected to possess thorough knowledge of current network security challenges, well-known vulnerabilities, attack methods, secure network engineering principles, and strategies to avoid vulnerabilities.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

NCS-340 Field Training III (9 CR)

This course shall be conducted collaboratively with AD Polytechnic Industrial partner. Content of this course shall meet state-of-the-art and state-of-the-practice technology and training modules.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

Systems and Servers Security Administration Specialization

SSA-110 MS Server Security I (3 CR)

The course provides in-depth training on implementing, configuring, managing and troubleshooting Active Directory Domain Services (AD DS) in Windows Server 2008 and Windows Server 2008 R2 environments or later versions. It covers core AD DS concepts and functionality as well as implementing Group Policies, performing backup and restore and monitoring and troubleshooting Active Directory related issues

Lecture 2 hrs/wk, Tutorial 3 hrs/wk, Lab 2 hrs/wk.

SSA-111 MS Exchange Server Security I (3 CR)

The course covers issues on how to configure and manage a messaging environment in accordance with technical requirements. Students will learn how to install MS Exchange Server Security 2007 and manage routing, client access, and the backup and restore of databases. They will also learn how to manage addressing and recipient objects such as mailboxes, distribution groups, and contacts.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-112 Linux/UNIX Operating Systems Security I (3 CR)

This course is intended to teach students how to use the tools provided by Linux/Unix. Students will become comfortable with using a Linux/Unix system and will become familiar with many of the Linux/Unix design paradigms. Apart from basic Linux/Unix proficiency, this course is designed to give students a working knowledge of tools in Linux/UNIX based work environments.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-113 Database Systems Security (2 CR)

This course will focus on issues related to the design and implementation of secure data stores. Emphasis will be placed on multilevel security in database systems, covert channels, and security measures for relational and object-oriented database systems

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 1 hrs/wk.

SSA-114 MS SharePoint Server Security I (3 CR)

The course equips students with skills to install, configure, and administer Microsoft SharePoint and also how to manage and monitor sites and users by using Microsoft SharePoint 2010 or later. It will also cover the new features and functionality introduced with SharePoint 2010 Sp1 or later including configuring Security for SharePoint Content.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk, Lab 1 hrs/wk.

SSA-115 Critical Infrastructure Security (3CR)

This course develops a network theory of vulnerability analysis and risk assessment of critical infrastructures of within the enterprise network. The course teaches how to apply fault and financial risk reduction techniques to derive the optimal strategy for protection an enterprise network.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-120 MS Windows Server Security II (3 CR)

The course is a continuation of windows server I with focus presenting advanced topics on design Network and Application Infrastructure with Windows Server 2008 and Windows Server 2008 R2 to meet varying business and technical requirements and will prepare IT Professionals for the role of Enterprise Administrator, operating system security. The learning plan also helps students prepare for Microsoft Technology certification.

Lecture 2 hrs/wk, Tutorial 3 hrs/wk, Lab 2 hrs/wk.

SSA-121 MS Exchange Server Security II (3 CR)

This course builds on its predecessor (MS Exchange Server Security I) to Develop student capabilities (skills) on how to configure and manage a messaging environment in accordance with technical requirements. Students will learn how to perform more on install MS Exchange Server Security 2007 and manage routing, client access, and the backup and restore of databases.

Lecture 2 hrs/wk, Tutorial 3 hrs/wk, Lab 2 hrs/wk.

SSA-122 Linux/UNIX Operating System Security II (3 CR)

This course builds on its predecessor (Linux/UNIX Operating System I) to introduce more topics to Linux/Unix operating systems. Topics include basic system administration, file systems and access permissions, common tools and utilities, and network service configurations, etc. and configure common network/internet services and clients such as web, FTP, SSH.

Lecture 2 hrs/wk, Tutorial 3 hrs/wk, Lab 2 hrs/wk.

SSA-123 MS SharePoint Server Security II (3 CR)

This course builds on its predecessor (MS SharePoint Server Security I) to teach students how to perform more tasks to install, configure, and administer Microsoft SharePoint and also how to manage and monitor sites and users by using Microsoft SharePoint 2010 or later. It will also cover the new features and functionality introduced with SharePoint 2010 Sp1 or later releases.

Lecture 2 hrs/wk, Tutorial 3 hrs/wk, Lab 2 hrs/wk.

SSA-124 Client/Server Security Administration (3 CR)

The course covers the issue of administering client-server architectures and performs its related programming techniques. The course also covers the essential knowledge and skills required to successfully administer peer-to-peer as a variant to client/server networks. Hands-on experience with commercial client software is important course component.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 4 hrs/wk.

SSA-130 Microsoft Window Server Security I [In-House Training – Phase I] (3 CR)

The course builds on practical knowledge to provide in-depth training on implementing, configuring, managing and troubleshooting Active Directory Domain Services (AD DS) in Windows Server 2008 and Windows Server 2008 R2 environments using Microsoft training academy hosted in AD Poly along with training program.

In- House Practical Training and Evaluation.

SSA-131 MS Exchange Server Security I [In-House Training – Phase I] (3 CR)

The course builds on practical knowledge on how to configure and manage a messaging environment in accordance with technical requirements. Students will learn how to install MS Exchange Server Security 2007 and manage routing, client access, backup and restore of databases, addressing, mailboxes, Exchange and Active Directory using Microsoft training academy hosted in AD Poly along with training program.

In- House Practical Training and Evaluation.

SSA-132 Linux/UNIX Operating Systems Security I [In-House Training – Phase I] (3 CR)

The course builds on practical knowledge to teach students how to install and configure Linux/UNIX operating systems. It will also demonstrate how students can use the tools provided by Linux/Unix.

Linux/Unix design paradigms. It serves as a beginners-level knowledge of installation and configuration of different types of Linux/UNIX operating systems using Red Hat training academy hosted in AD Poly along with training program.

In- House Practical Training and Evaluation.

SSA-133 MS SharePoint Server Security I [In-House Training – Phase I] (3 CR)

The course builds on practical knowledge to teach students how to install, configure, and administer Microsoft SharePoint and also how to manage and monitor sites and users by using Microsoft SharePoint 2010 or later. It will also cover the new features and functionality introduced with SharePoint 2010 Sp1 or later using Microsoft training academy hosted in AD Poly along with training program.

In- House Practical Training and Evaluation.

SSA-134 Database Application Server Admin (3 CR)

This course introduces the architecture of Oracle Application Server and enables the students to effectively install and manage Oracle Application Server. Basic management tasks such as starting and stopping of Oracle Application Server instances and its components, configuring the Oracle Application Server Infrastructure and the Oracle Application Server middle-tier. This course counts towards the requirement for the Oracle Application Server Administrator Certification.

In- House Practical Training and Evaluation.

SSA-135 Physical Security and Biometrics (1 CR)

The course presents aspects of physical (environmental) security and biometrics. The physical security domain provides protection techniques for the entire facility, including all of the information system resources. In particular, development of site Physical Security Program will be demonstrated.

In- House Practical Training and Evaluation.

SSA-140 MS Windows Server Security II [In-House Training [Phase 2] (3 CR)

The course builds on practical knowledge and advanced skills to design Network and Application Infrastructure with Windows Server 2008 and Windows Server 2008 R2. The course will allow students to design such infrastructure to meet varying business and technical requirements and will prepare IT Professionals for the role of Enterprise Administrator. The course will demonstrate how to configure security concepts in a Windows Server 2008 environment in preparation for Microsoft Technology certification. The course makes use of training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

SSA-141 MS Exchange Server Security II [In-House Training [Phase 2] (3 CR)

The course builds on practical knowledge and advanced skills to configure and manage a messaging environment in accordance with technical requirements. Students will learn how to install MS Exchange Server Security 2007 and manage routing, client access, and the backup and restore of databases, and manage addressing and recipient objects such as mailboxes, distribution groups, and contacts. The course makes use of training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

SSA-142 Linux/UNIX Operating System II [In-House Training-Phase 2] (3 CR)

The course builds on practical knowledge and advanced skills to Linux/Unix operating systems as continuation to previous course. Topics include advanced installation system configuration and administration, file systems and access permissions, common tools and utilities, network services, shell programming, storage management, file system administration, configuring network services and security.

In- House Practical Training and Evaluation.

SSA-143 MS SharePoint Server Security II [In-House Training [Phase 2] (3 CR)

The course builds on practical knowledge and advanced skills to install, configure, and administer Microsoft SharePoint and also how to manage and monitor sites and users by using Microsoft SharePoint 2010 or later. The course makes use of the training academies hosted in AD Poly.

In- House Practical Training and Evaluation.

SSA-144 Database Server Security Administration I (3 CR)

The course is an introductory course for Oracle and Microsoft Database Administration (DBAs). The course presents in-depth understanding of Oracle architecture and internal mechanisms such that the student is able to perform basic DBA tasks such as database creation, startup and shutdown, and database management. The course also covers Oracle networking basics and the Oracle utility programs. It serves as preparatory course for the Oracle Certified Professional (OCP) program. It will also prepare student for DBA Training as a Microsoft Certified Database Administrator (MCDBA) who can implement and administer Microsoft SQL Server databases.

In- House Practical Training and Evaluation.

SSA-145 System Security Assessment (2 CR)

The course is to teach students the criteria for system security assessment . The course covers the fundamentals of establishing a required level of software and system security and applying methods and determining measures to assess whether the required level of security and assurance has been achieved using a range of assessment methods including requirements validation, risk analysis, threat analysis, vulnerability assessment, and assurance cases.

In- House Practical Training and Evaluation.

SSA-210 MS Windows Server Security Administration I (3 CR)

The course equips the students with capabilities to get Windows Server 2008 certification. The course will validate student ability to use new features, including web tools, virtualization technologies, security enhancements, and management utilities. It will also provide students with the knowledge and skills to configure and troubleshoot Windows Server 2008 and Windows Server 2008 R2 Sp1 Network Infrastructures and technologies, and configuring secure network access.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-211 MS Exchange Server Security Administration I (3 CR)

The overall objective of the course is to Develop student capabilities (skills) of administering MS Exchange Server Security and its related services and components. Students will get the knowledge and skills to configure and manage an Exchange Server 2010 messaging environment. This course will teach students how to configure Exchange Server 2010, as well as provide guidelines, best practices, and considerations that will help to optimize Exchange Server deployment.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-212 Linux/UNIX Server Security Administration I (3 CR)

The course builds on practical knowledge and advanced skills on Linux/UNIX system administration. Topics include system administration common practices, system installation and configuration.

Additional topics include understanding the Unix file system, configuring basic system hardware and services, managing user accounts, basic system security, and backups. Major Unix variants will also be covered.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-213 MS SharePoint Server Security Administration I (2 CR)

The course covers various topics on administering Microsoft SharePoint and also explains how to manage and monitor sites and users by using Microsoft SharePoint 2010 or later including writing custom Service Applications and monitoring and Optimizing SharePoint Performance.

Lecture 1 hrs/wk, Tutorial 1 hrs/wk, Lab 2 hrs/wk.

SSA-214 Database Server Security Administration II (3 CR)

This course is an advanced course for Oracle and Microsoft Database Administration (continuation to course SSA-144). The course covers in-depth administration skills of Oracle architecture and internal mechanisms such that the student is able to perform advanced DBA tasks and Oracle networking that leads to the Oracle Certified Professional (OCP) program. It will also prepare student for DBA Training as a Microsoft Certified Database Administrator (MCDBA) who can implement and administer Microsoft SQL Server databases.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-215 Graduation Project I (1 CR)

The overall course objective is to develop students' creativity, design, and team work skills in pursuing a modern topic in system and server security administration.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-221 Field Training I (9 CR)

This course shall be conducted collaboratively with AD Polytechnic Industrial partner. Content of this course shall meet state-of-the-art and state-of-the-practice technology and training modules. The overall objective of this course aims on developing students' knowledge and practices to develop secure system/server administration.

11 weeks; Training Modules based on Industrial partner schedule.

SSA-231 Field Training II (9 CR)

This course is a continuation of Field training I with focus on building more job skills in the specialization of study.

11 weeks; Training Modules based on Industrial partner schedule.

SSA-240 MS Windows Server Security Administration II (3 CR)

This course is a continuation to SSA-210. The course develops student capabilities to get Windows Server 2008 certification where emphasis is placed on using new features, including web tools, virtualization technologies, security enhancements, and management utilities. It will also provide students with the knowledge and skills to configure and troubleshoot Windows Server 2008 and Windows Server 2008 R2 Sp1 Network Infrastructures and technologies, Network Policy server and Network Access Protection and configuring secure network access.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 1 hrs/wk.

SSA-241 MS Exchange Server Security Administration II (3 CR)

The course is a continuation to MS Exchange Server Administration I with emphasis on advanced topics in enterprise-level messaging administrators using MS Exchange Server Security and its related services. Topics include advanced administration of exchange server, securing messages with Exchange Server 2007, implementing Messaging Policies in Exchange Server 2007, high availability and Disaster recovery in exchange Server 2007, and introducing unified messaging in exchange Server 2007.

Lecture 1 hrs/wk, Tutorial 2 hrs/wk, Lab hrs/wk.

SSA-242 Linux/UNIX Server Security Administration II (3 CR)

This course is a continuation of SSA-212. The focus is on advanced topics in Linux/Unix system administration. Topics include shell scripts, scripting tools, software development tools, managing documentation, using open source, configuring services including email, logging, and DNS, building and configuring custom kernels, kernel modules, patching and updating the kernel and applications, system monitoring and tuning, and basic system security, System and service monitoring, basic Apache web server setup, configuring web mail.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

SSA-243 Graduation Project II (2 CR)

The course is a continuation of Graduation Project I. Student will continue working on delivering creative, team work solution for the problem identified in the previous phase of the project.

SSA-244 Selected Topics in Server Security (3 CR)

The course will offer participants advanced topics in server security and administration, which is related to new technology, solutions, models, and approaches. The objective is to help students explore advancement, state-of-the-art technology, solutions, methods, processes, and approaches in order to cope with security technology evolution.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab2 hrs/wk.

SSA-245 Penetration and Vulnerability Analysis (2 CR)

This advanced course in system security focuses on penetration testing and vulnerability analysis. It introduces methodologies, techniques and tools to analyze and identify vulnerabilities in stand-alone and networked applications. The identification of vulnerabilities and risks inherent in the operation and administration of information systems will be explored. Countermeasures will be discussed and documented in an effort to counter identified vulnerabilities.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 1 hrs/wk.

SSA-310 Malware Analysis: Tools and Techniques (3 CR)

This course will utilize key tools and techniques for malware analysis and examine malicious programs. Students will learn how to explore Windows malware in two phases: Behavioral analysis focuses on the program's interactions with its environment, such as the registry, the network and the file system.

SSA- 311 Security Tools and Technologies: Windows (3 CR)

This course Provides hands-on experience in configuring and experimenting with security software in widows environment through live laboratory environment, with the purpose of understanding real-world security threats. Also, discussed possible mitigation and defending mechanisms, such as monitoring and intrusion detection software.

SSA- 312 Information Assurance & Security Management (3 CR)

This course provides students a systematic and practical approach for establishing, managing and operating a comprehensive Information Assurance program. The course provides students with an understanding of the essential issues required to develop and apply a targeted information security posture to both public and private corporations and government run agencies.

SSA-313 Virtualization and Private Cloud Security (3 CR)

Cloud computing is a relatively new phenomenon that provides for distributed computing and data storage capabilities. Instead of buying large servers to store data, and being saddled with the cost of building and maintaining those systems, users can now purchase those servers from a third party with the ability to expand or contract those needs as necessary.

SSA- 314 Business Contingency Planning and Auditing (3 CR)

This course provides insight into secure information system governance, regulations, and compliance including noteworthy legislation, regulations, and compliance issues as well as commonalities and significant differences between departments and agencies within the Federal Executive Branch (FEB).

SSA- 315 Information Warfare (2 CR)

This course presents the relationships and interdependencies of business and national objectives, of companies and countries, and of their dependence on advances in technology.

SSA-320 Identity Management (3 CR)

This course provides students with necessary tool for understanding the complexity of identity in a virtual world. The course describes the key issues of identity management as well as appropriate strategies and preventative measures for ensuring personal safety in the virtual world.

SSA-321 Security Tools and Technologies: Linux/UNIX (3 CR)

Students will learn about the issues and resources available to secure UNIX/Linux Systems. Operating system security mechanisms as well as open source auditing, attack, and defense tools will be covered.

SSA-322 Security Governance and Compliance (3 CR)

This course provides a detailed knowledge of IT Governance principles and procedures, and the basic concepts of the ISO 27001 / ISO 27002 standard. The student possesses thorough knowledge about the overall process for establishment and maintenance of an Information Security Management Systems.

SSA- 323 Systems Embedded Security (3 CR)

The course will cover the topics of making embedded systems reliable, safe, and secure. The course will cover a study of the system architectures, operating systems and hypervisors, networking, storage, and

cryptographic issues that must be considered when designing secure embedded systems

SSA- 324 Ethics, Law and Policy in Cyberspace (3 CR)

This course builds on topics covered in previous course (ICT-035 computing ethics). The course provides an overview of the ethical challenges faced by individuals and organizations in the information age and introduces the complex and dynamic state of law as it applies to behavior in cyberspace.

SSA- 325 Advanced Web Application Security (2 CR)

The course will introduce web application security threats, such as hackers, masqueraders, information spoofing, sniffing, and distribution of damaging software, the associated security risks, and prevention/detection/response techniques.

SSA- 330 Adv. Sec. Essentials – Enterprise Defender (3 CR)

This course provides practices and procedures for defending business-class, heterogeneous networks against threats (including system failure, environmental events, human error) and attacks (including intrusion, malicious software, denial of service).

SSA- 331 Perimeter Protection In-Depth (3 CR)

This course covers network security and cryptographic protocols. Network vulnerabilities, attacks on TCP/IP, network monitoring, security at the link, network and transport layers. Topics include basics of cryptography- secret and public key schemes, message authentication codes and key management.

SSA- 332 System Security Intelligence (3 CR)

This course present the most recent advances in artificial intelligence techniques (i.e. neural networks, fuzzy systems, multi-agent systems, genetic algorithms, image analysis, clustering, etc), which are applied to the protection of privacy and security.

SSA- 333 Security Policy Design & Implementation (3 CR)

This course examines the concepts underlying security policy design, implementation, and management. It addresses the steps in security model design, data classification, threats and vulnerabilities, quantitative and qualitative risk analysis, evaluating countermeasures, and the standards to ensure confidentiality, integrity, and availability (CIA).

SSA- 334 Elective Course (3 CR)

This course will offer participants advanced topics in system security, which is related to new technology, solutions, models, and approaches. The objective is to help students explore advancement, state-of-the-art technology, solutions, methods, processes, and approaches in order to cope with technology evolution.

SSA- 335 Systems/Servers Security Trends (2 CR)

Students who will complete this course are expected to possess thorough knowledge of current software security challenges, well-known vulnerabilities, attack methods, secure software engineering principles, and strategies to avoid vulnerabilities.

SSA- 340 Field Training (9 CR)

This course shall be conducted collaboratively with AD Polytechnic Industrial partner. Content of this course shall meet state-of-the-art and state-of-the-practice technology and training modules. The overall objective of this course aims on developing students' knowledge and practices to develop secure networking and web space.

Oil and Gas Process Engineering Technology

OGP-113 Organic Chemistry (3 CR)

This is an introductory course in organic chemistry designed to give petroleum engineering technology students a knowledge and understanding of the fundamental chemical concepts of organic products and

derivatives which are prominent in the petroleum industry.
Lecture 2 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-215 Equilibrium Thermodynamics (2 CR)

Provide students with an understanding of the basic laws and principles of equilibrium thermodynamics. To develop students' ability to undertake thermodynamic analysis in various applications.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-218 Fluid Mechanics (3 CR)

This is an introductory course in fluid mechanics designed to develop both the knowledge of the laws and principles governing fluid mechanics and the ability to apply this knowledge in analyzing related petroleum engineering applications. The course also provides a base for advanced courses in piping design, ducting design, and fluid power systems.
Lecture 2 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-220 Mass Transfer Operations I (3 CR)

The course introduces the fundamental aspects of basic unit operations used in petroleum and oil and gas industry and the concept of equilibrium staged separations. It provides sufficient understanding of the size calculations required for design of unit equipment.
Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

OGP-222 Elementary Principles of Process Engineering (2 CR)

Solution of elementary problems by application of mass balances, energy balances, and equilibrium relationships
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-223 Physical Chemistry (3 CR)

An overview of some of the topics in Physical Chemistry – Atomic and Molecular Structure, Spectroscopy, Statistical Thermodynamics and Electrochemistry.
Lecture 2 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-225 Chemical Reactors and Mixing (4 CR)

In oil and gas industries, chemical reactions take place in chemical reactors. A variety of chemical reactors will be examined and in in-depth study of batch, and continuously stirred tank reactors will take place. Simulation and laboratory work will be used to teach students the fundamentals of safe and correct start-up, shut down, and control and troubleshooting of mixing tanks and reactors.
Lecture 3 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-228 Process Heat Transfer (2 CR)

This course deals with underlying theories and applications of heat transfer. These principles are then related to the unit processes involved in petroleum industry.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-313 Surface Production Operation Facilities (2 CR)

This course deals with underlying theories and applications of surface production facilities. Understanding of production aspects such as well stimulation, secondary and tertiary recovery methods applied to reservoirs to increase their productivity are addressed as well.
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-314 Analytical Chemistry (3 CR)

The course will define and illustrate the analytical approach to chemical analysis, in particular environmental analysis. The theoretical principles of classical and instrumental analysis will be reinforced by means of a laboratory and tutorial program. Students will be encouraged to develop problem solving skills and apply these to the solution of real chemical problems.
Lecture 2 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-315 Mass Transfer Operations II (4 CR)

This is the second course of mass transfer operations which provides students with an introduction to

calculation methods and design/procedures for complex distillation systems, cooling towers, crystallizers, absorbers, evaporators and dryer systems.

Lecture 3 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-316 Gas Processing and Treatment (3 CR)

The course is designed for petroleum engineering technology students to enhance their understating about gas processing and treatment.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

OGP-327 Introduction to Refining Processes (4 CR)

This is the first course of two refining processes courses that focus on the core building blocks of the refining process systems, equipment and economics. The two courses will emphasize refining process unit operation fundamentals and safe utilization of these fundamentals by operations and maintenance personnel.

Lecture 3 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-331 Water Treatment and Injection (4 CR)

Secondary Recovery schemes, including pressure maintenance, have become almost standard in the development of oil fields throughout the world in an effort to increase recoveries at a minimum cost. The primary mechanism used is water injection - water is cheap, readily available and immiscible with the oil - but requires specific treatments to ensure reservoir problems are minimized. Furthermore as water is injected water will be produced in increasing amounts leading to additional (or different) treatment prior to injection or disposal. The course provides coverage of the theory and practice of water treatment for injection as part of a secondary recovery scheme or disposal of produced waters.

Lecture 3 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-338 Process Equipment Drawing (1 CR)

This course covers an introduction and anatomy of process equipment drawing. It will integrate the materials cover in the prerequisite (schematic and mechanical drawing). Different process equipment schematics and components will be covered as shown in the course topics.

Lecture 1 hrs/wk, Tutorial 5 hrs/wk.

OGP-340 Petroleum Storage and Loading (2 CR)

Oil and gas storage and loading belongs the oil and gas process which takes the product from the wellhead manifolds and delivers stabilized marketable products, in the form of Crude Oil, Condensate or Gas to the market.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-401 Utility Systems and Operations (2 CR)

The course provides an overview of the various Utility Systems, key selection considerations and how they are integrated into oil and gas facilities. Individuals will develop a basic understanding of the wide variety of utility systems and components and how they integrate with the process facilities and overall operation. System selection, costs and other managerial decisions pertinent to utility operations are covered.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-414 Chemical Reactor Design (3 CR)

Catalysis and kinetics of heterogeneous reactions. Heterogeneous reactors. Non-isothermal reactor design. Heat and mass transfer in heterogeneous reactors.

Lecture 3 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-424 Petroleum Refinery (3 CR)

This is the second course of two refining processes courses that focus on the core building blocks of the refining process systems, equipment and economics. The two courses will emphasize refining process unit operation fundamentals and safe utilization of these fundamentals by operations and maintenance personnel

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

OGP-428 Process Modeling, Simulation and Optimization (3 CR)

The course is designed for OGP technology students to enhance their process units modeling and simulation

knowledge and skills.

Process Modeling and Simulation. Introduction: uses and classification of mathematical models; a unified approach for formulation, solution and validation of mathematical models; numerical methods (review of techniques for solving systems of linear and nonlinear algebraic equations, systems of ODEs, applications to chemical engineering problems); introduction to MATLAB and available process simulation packages; modeling and simulation of chemical engineering systems (fundamental laws and concepts, modeling and simulation of typical examples with/without controllers). Process optimization. Essential features of optimization problems; necessary and sufficient conditions for an extremum; unconstrained single variable and multivariable search methods; nonlinear Programming with constraints; applications.

Lecture 2 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-430 Petrochemicals (3 CR)

In this course students will be introduced to the building blocks of petrochemicals, the nine key hydrocarbon compounds that form the basis for the petrochemicals industry. The course covers these important hydrocarbons one by one, sharing knowledge of how they're derived, the technology employed to produce them, and some of the many products manufactured using them.

Lecture 3 hrs/wk

OGP-464 Process Dynamics and Control (3 CR)

This is a three-hour course which is intended to introduce students to the fundamentals and applications of process dynamics and control. The course reinforces controllers design of common process equipment. Practical problems are used as examples.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

OGP-465 Plant and Equipment Design (4 CR)

In this course the students will apply the legislation and codes necessary for Process Engineering design. The course also covers design procedures for some equipment involved in a chemical/oil and gas/ process engineering plant.

Lecture 3 hrs/wk; Lab 2 hrs/wk, Tutorial 2 hrs/wk.

OGP-xxx On-the-Job Performance

OGP-xxx is required on-the-job training for oil and gas process engineering technology students. On-the-Job Training will take place during the third quarter of the third year for AB and HD students and during the fourth quarter of the fourth year for AB students only. Abu Dhabi Polytechnic will arrange with ADNOC to allocate training place for course students ahead of time.

(Each PET student must participate in an approved training/performance program. The program must contain practical elements of the courses in the HD and AB programs. At the end of the training period, a formal written report must be submitted; student grade will be either S OR U (satisfactory or unsatisfactory).

Petroleum Engineering Technology

PET-010 Introduction to Petroleum Industry (3 CR)

Overview of petroleum industry and petroleum engineering including nature of oil and gas reservoirs, petroleum exploration and drilling, formation evaluation, well completions and production, surface facilities, reservoir mechanics, and improved oil recovery.

Lecture 3 hrs/wk.

PET-115 Introduction to Petroleum Geology (3 CR)

This course is an introduction to petroleum geoscience – a kind of “Essentials of Petroleum Geology” - for petroleum engineering students.

Lecture 2 hrs/wk; lab: 2 hrs/wk, Tutorial 2 hrs/wk.

PET-221 Applied Safety (2 CR)

Process safety is vital to the oil and gas industry. This course introduces the concepts of process safety in the oil and gas industry, the elements and benefits of process safety systems, and tools for implementing and managing a system.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-310 Project Management (2 CR)

This course will provide a comprehensive presentation and discussion of modern project management principles and practices as they relate to design; procurement; construction activities, maintenance; and upgrade turnarounds at facilities in the oil and gas industry. The course is taught using a combination of instruction, facilitated discussion, and hands-on exercises using “real-world” project examples related to facilities design, procurement, construction, and turnarounds. The exercises will include both individual and group activities that will provide each student with a visual application of the principles and practices discussed throughout the course.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-399 Graduation Project (2 CR)

In this project, students are distributed into groups with a minimum of three students. Each group selects a project under the supervision of a faculty member and makes literature review, process selection and submits a written report and presents it orally at the end of the semester. Each group makes the mathematics calculations, equipment selection and design, technical and profitability analysis, safety and environment evaluation. Students should use available design and simulation software. Final technical written report is submitted by the end of the quarter (week 10) and presented by the group in the same week or during the examination week (11).

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-330 Applied Health (2 CR)

Workers health is vital to the oil and gas industry. This course builds on learning on health and industrial hygiene, and intends to build skills to allow students to be able to apply these techniques within their respective roles, after graduation, in petroleum engineering industry.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-411 Petroleum Economics (2 CR)

The course will provide students with the fundamentals necessary to enable them to answer some questions about planned oil and gas projects such as: what will it cost? what is it worth? will it earn sufficient profit? Contractual arrangements, which also significantly impact the economic viability of a project, are covered. Students will practice cash flow techniques for economic evaluations and investigate frequently encountered situations.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk

PET-414 Advanced Engineering Mathematics (3 CR)

This course covers step-by-step solution methods of ordinary and partial differential equations.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-499 PET Design Project (2 CR)

In this project, students are distributed into groups with a minimum of three students. Each group selects a project under the supervision of a faculty member and makes literature review, process selection and submits a written report and presents it orally at the end of the semester. Each group makes the mathematics calculations, equipment selection and design, technical and profitability analysis, safety and environment evaluation. Some students groups might decide to continue working on the same project started in PET-399 and add advanced design components to it. Students should use available design and simulation software. Final technical written report is submitted by the end of the quarter (week 10) and presented by the group in the same week or during the examination week (11).

Lecture 2 hrs/wk; Tutorial 2 hrs/wk.

PET-326 Petroleum Engineering Numerical Methods (3 CR)

Use of numerical methods in a variety of petroleum engineering problems; numerical differentiation and integration; root finding; numerical solution of differential equations; curve fitting and interpolation.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-435 Applied Environment (2 CR)

This course provides opportunities to apply the tools, techniques and management systems of environmental management in petroleum industries.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-450 Special Topic in Petroleum Engineering Technology (3 CR)

The course will cover a special topic in one or more of the areas of the petroleum engineering discipline. The special topics course series presents selected current and emerging topics in petroleum engineering depending on need as determined by the department faculty. Topic(s) will be selected according to the faculty expertise and the students' interest and enrollment.

Lecture 3 hrs/wk

PET-xxx On-Campus Training

PET-xxx is required on-campus training for petroleum engineering technology and oil and gas process engineering technology students. This vocational training will last for 33 weeks (2nd year: third and fourth quarters; 3rd year: second quarter).

PET-223 Drilling Technology I (2 CR)

Equipment and procedures involved with drilling oil and gas wells are described. The overall drilling process is presented along with definitions and descriptions of drilling equipment. The various components are discussed in greater detail with explanations of the basic science concepts which guide the processes shown in the course topics.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-209 Reservoir Rock Properties (2 CR)

Basic petrophysical properties of reservoir rocks including porosity, permeability, fluid saturation, electrical conductivity, capillary pressure, and relative permeability. Laboratory measurement of the reservoir rock characteristics mentioned above.

Lecture 2 hrs/wk; lab: 2 hrs/wk, Tutorial 2 hrs/wk.

PET-216 Reservoir Fluid Properties (2 CR)

Study of the phase behavior of hydrocarbon systems as related to petroleum recovery. Ideal and real gas behavior, single and multicomponent two-phase systems, properties of reservoir fluids under various conditions of pressure and temperature. Laboratory tests on reservoir fluids.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

PET-217 Reservoir Engineering I (3 CR)

The course serves as an introduction allowing the student to master a more complete "understanding" of the characteristics of oil and gas reservoirs, from fluid and rock characteristics through reservoir definition, delineation, classification, development plan, and production.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-218 Logging and Formation Evaluation (4 CR)

Comprehensive study of modern well logging methods, open-hole and cased-hole log interpretation methods. Production logging. Design of logging programs and examples of applications.

Lecture 2 hrs/wk; lab: 2 hrs/wk, Tutorial 2 hrs/wk.

PET-313 Drilling Technology II (4 CR)

Equipment and procedures involved with drilling oil and gas wells are described. The overall drilling process is presented along with definitions and descriptions of drilling equipment. The various components are discussed in greater detail with explanations of the basic science concepts which guide the processes shown in the course topics.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-315 Geomechanics (3 CR)

This course provides an understanding of the fundamentals of rock mechanics. It introduces important concepts such as elasticity and failure mechanics, borehole stresses, poroelasticity, and acoustic wave propagation. In addition, the course also discusses the important parameters in rock mechanics and the application of rock mechanics in borehole stability, hydraulic fracturing, and reservoir subsidence.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

PET-319 Well Testing (2 CR)

Pressure drawdown and buildup tests. Injection and fall-off tests. Average reservoir pressure. Reservoir limit tests. Type curve matching. Pulse and drill stem tests. Test design and instrumentation.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-320 Petroleum Production Fundamentals (3 CR)

The upstream of the petroleum industry involves itself in the business of oil and gas exploration and production (E&P) activities. While the exploration activities find oil and gas reserves, the production activities deliver oil and gas to the downstream of the industry (i.e., processing plants). The petroleum production is definitely the heart of the petroleum industry. The course contains eight topics covering petroleum production engineering fundamentals. It presents an introduction to the petroleum production system, documents properties of oil and natural gases that are essential for designing and analyzing oil and gas production systems, covers in detail the performance of oil and gas wells, presents techniques used to forecast well production for economics analysis, and describes empirical models for production decline analysis.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-325 Production Logging (4 CR)

Production logging refers to a suite of logs that are normally run on completed injection or production wells to evaluate the performance of the well itself or of the reservoir as a whole. Other production logs can evaluate the well completion or look behind pipe to evaluate the formation and its fluids in the near-well vicinity. Production logs are playing an increasing role in modern reservoir management by providing the only means of identifying downhole fluid movements directly.

Lecture 3 hrs/wk; lab: 2 hrs/wk, Tutorial 2 hrs/wk.

PET-350 Well Completion (4 CR)

Equipment and procedures involved with drilling oil and gas wells are described. The overall drilling process is presented along with definitions and descriptions of drilling equipment. The various components are discussed in greater detail with explanations of the basic science concepts which guide the processes shown in the course topics.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

PET-340 Unconventional Resources Completion & Stimulation (3 CR)

Horizontal wells have become the industry standard for unconventional and tight formation gas reservoirs. Because these reservoirs have poorer quality pay, it takes a good, well-planned completion and fracture stimulation(s) to make an economic well. Even in a sweet spot in the unconventional and tight gas reservoir, good completion and stimulation practices are required; otherwise, a marginal or uneconomic well will result. This course will address few questions related to the course title such as: what are good completion and stimulation practices in horizontal wells in these unconventional reservoirs? What are the objectives of horizontal wells and how do we relate the completion and stimulation(s) to achieving these goals? How many completions/stimulations do we need for best well performance and/or economics? How do we maximize the value from the horizontal wells? When should a horizontal well be drilled longitudinally or transverse?

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-409 Equipment Design and Selection (3 CR)

The course includes three topics presenting principles and rules of designing and selecting the main components of petroleum production systems. These topics are designed for senior level petroleum engineering students. The topics address tubing design, present rule of thumbs for selecting components in separation and dehydration systems, and details principles of selecting liquid pumps, gas compressors, and pipelines for oil and gas transportation.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-410 Gas Production Engineering (3 CR)

Reservoir performance covers the fundamentals of reservoir gas flow and details the best methods for testing wells, according to the time and money available. The importance of flow regime and non-Darcy flow on test design and interpretation is emphasized for new wells and for the possibility of improving the performance of older wells. Also discussed are performances of tight formations, horizontal wells, fractured

wells, and methods for estimating gas reserves. Calculation and determination of the effect of each system component on total well performance, which permits optimum sizing of tubing, flow-lines, separators, and compressors. Formation damage, gas well de-watering, hydrate formation, water influx, and abnormal reservoir pressure problems are reviewed. Relate reservoir and well performance to time, as well as calculate cash flow and compression requirements. Discuss the best procedures to predict when liquid loading will make a well nonproductive. Field gas processing, including dehydration and condensate recovery, is briefly reviewed. Gas production is emphasized, although an overview on field gas processing is presented.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-413 Reservoir Engineering II (3 CR)

The course includes application of reservoir engineering data to calculation of recovery potentials and to analysis and prediction of reservoir performance under a variety of production methods to effect maximum conservation.

Lecture 3 hrs/wk; Tutorial 2 hrs/wk.

PET-415 Enhanced Oil Recovery (3 CR)

One-third to one-half of the original oil-in-place may remain in a reservoir as it reaches abandonment due to its economic limit. The primary reasons are heterogeneity of the reservoir, unfavorable fluid properties, inefficient nature of the displacement process, oil price and production cost considerations. The secondary reasons, however, are: inappropriate development, inefficient reservoir management practices, and escalating costs of remedial interventions/corrective measures and producing operations. The oil recovery is generally lower than expected due to some combination of the above reasons. Gaining a better understanding of the reservoir fundamentals and the important variables that influence the recovery process can enhance it. This course covers the recovery improvement possibilities that present themselves at all stages in the reservoir life cycle. It thereby enables one to timely select the most beneficial method and set realistic expectations on production behavior changes and recovery improvement.

Lecture 3 hrs/wk

PET-419 Artificial Lift Methods (4 CR)

Approximately 50% of the wells worldwide need artificial lift systems. The course includes three topics introducing artificial lift methods. The topics present an introduction to the sucker rod pumping system and its design procedure, describe gas lift method, and provide an overview of all other artificial lift methods and their design procedures.

Lecture 3 hrs/wk, Lab 2 hrs/wk.

PET-422 Applied Water Technology & Corrosion (2 CR)

This course will provide the student with the knowledge to identify various types of corrosion, the causes of corrosion and the susceptible locations of corrosion in petroleum industry.

Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-429 Production Enhancement (3 CR)

This is the last course in petroleum production engineering and is composed of four advanced topics addressing production enhancement techniques. The topics starts with identifying well production problems, deal with designing acidizing jobs, provide a guideline to hydraulic fracturing and job evaluation techniques, and the last topic presents some relevant information on production optimization techniques.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk.

PET-437 Reservoir Simulation (3 CR)

Solution of production and reservoir engineering problems using state-of-the-art commercial reservoir simulation software, using data commonly available in industry. Emphasis on reservoir description, reservoir model design and calibration, production forecasting and optimization, economic analysis and decision making under uncertainty.

Lecture 3 hrs/wk, Tutorial 2 hrs/wk, Lab 2 hrs/wk.

PET-443 Advanced Drilling Engineering (3 CR)

This course integrates all major well design technologies from pre-spud to total depth (TD). Students are actively engaged in every aspect of the technical activities required to deliver a cost-effective well plan

while also gaining valuable perspective on how the overall process should be managed in a dynamic team environment. It also includes advanced well control; Managed pressure drilling; Underbalanced drilling; offshore drilling; horizontal drilling, extended reach, multi-lateral drilling; and fishing operations
Lecture 2 hrs/wk, Tutorial 2 hrs/wk.

PET-xxx On-the-Job Performance

PET-xxx is required on-the-job training for petroleum engineering technology. On-the-Job-Training will take place during the third quarter of the third year for AB and HD students and during the fourth quarter of the fourth year for AB students only. Abu Dhabi Polytechnic will arrange with ADNOC to allocate training place for course students ahead of time.

(Each PET student must participate in an approved training/performance program. The program must contain practical elements of the courses in the HD and AB programs. At the end of the training period, a formal written report must be submitted; student grade will be either S OR U (satisfactory or unsatisfactory).

13. Student Information and Services

Academic Advising/ Counselling

Students can obtain academic advice from their course instructors and their technical division faculty. In addition tutors and learning advisers are available and can advise students on issues related to academic writing, exam preparation, time management, and other academic skills. Learning advisers can help students improve the structure of written assignments, organize ideas, develop arguments, and understand the expectations of AD Poly. Their focus is on helping students develop strategies to independently revise their own work and manage their study.

Personal and Career Counselling

All students are given advise on careers at the orientation session administered early in their enrollment and throughout their tenure at the academy. Students are given opportunities to discuss their careers with sponsors visiting the academy on frequent basis.

Abu Dhabi Polytechnic has career advisers, counselors, and other administrative staff whose primary focus is to help students overcome their academic and social problems and to be aware of other programs at AD Poly. Counseling may be offered to students who have academic or personal problems that might interfere with their classroom performance or social functioning. Counselors will be able to help students find solutions to their problems and enhance their development at the academic and/or personal level.

Dining

Abu Dhabi Polytechnic: Abu Dhabi offers a variety of food outlets for students and staff. AD Poly understands that everyone has different tastes, appetites, and eating habits. Therefore, AD Poly offers an extensive variety of menus and venue options to best fit each individual lifestyle, schedule, budget, and dietary need. A catering service is also available for AD Poly functions and conference groups of all sizes. AD Poly aims to offer fresh, safe, innovative, and quality food products in modern surroundings which reflect current market trends while ensuring value for money.

At the Al Ain campus there is a Canteen or a Cafeteria that will serve food, drinks, salads and fruits during the two breaks. The canteen is obviously a place that serves food and drink and as such is required to meet the stringent health and hygiene requirements of the UAE. The Management expects you, the student, to play a full part in assisting in keeping this environment free from unnecessary rubbish and waste.

Dress Code

Staff and students are expected to dress modestly at all times. Clothing must be clean, neat and tidy. Female staff are expected to wear blouses/tops that cover their shoulders and upper arm, and to wear skirts or trousers where the hem is at the mid-calf or ankle. Female staff are expected to leave their face uncovered while in class and the staff rooms. Male staff are expected to wear shirts that cover their shoulders and upper arm, and to wear trousers where the hem is at the ankle. Male UAE Students and staff have to wear a kandoora.

Staff and students are expected to wear clothes that are appropriate for the activities they will be undertaking. Staff and students must wear closed shoes for all classes in laboratories for safety. Staff and students must wear sleeves that can be folded back so that hands can be washed thoroughly and safety ensured in the laboratories.

At the Al Ain campus students are required to wear the Aviation uniform every day of the academic week, unless told otherwise. Students need to be aware that all academic and non-academic activities are directed towards helping them prepare to enter the workforce and to be responsible UAE citizens. It is important for students to act as ambassadors of the Al Ain campus and their sponsors and so they should always present themselves smartly.

Extracurricular Activities and Groups

The Student Council (described below) is officially recognized by AD Poly to organize students to work with staff to enrich AD Poly's extracurricular activities such as coordinating athletic and cultural activities and forming organized groups of students for particular purposes. Examples, AD Poly sponsors an annual 'Aircraft Pulling Competition' in which teams of students pulled our Bell helicopter around a track on National Day. AD Poly also sponsors field trips to air shows and aviation related events. Our students get a look into the business they are choosing as their career.

A variety of physical, social, and cultural activities are planned during the academic year. Students may organize events through the Student Council. Activities are also planned to complement classroom activities and develop leadership skills and teamwork.

In addition, AD Poly provides opportunities for youngsters to experience aviation first hand. AD Poly sponsors a summer program for all 9th, 10th, 11th grades that exposes them to the aviation field. Groups of Students from the IAT schools learned skills in the assembly of model aircraft to build up an appreciation of the principles of flight and gain an insight into the basics of aircraft engineering.

Health Services

Abu Dhabi Polytechnic provides medical care for students during the day. Minor complaints are attended to by the AD Poly nurse. Injuries and major complaints are sent to a nearby hospital.

Housing

On the main campus in Abu Dhabi students from other cities are given the opportunity of residence in Abu Dhabi. The Student Support services unit arranges furnished residence to all students that travel from other cities. Student support services unit is working on providing the residence hall with computer facilities.

At the Al Ain campus students from other cities are given the opportunity of residence in Al Ain. The Student Support services arranges furnished residence to all students that travel from other cities to enroll at the academy.

Library and Academic Resources

Abu Dhabi Polytechnic has a well-equipped library and study hall with a growing collection of resources. The library is designed to support the Diploma / Higher Diploma and Applied Bachelor technical programs through a wide collection of books, journals, electronic resources, and on-line databases which provide links to full text articles. The library information technology infrastructure includes work stations connected to the internet to allow students to access the most recent articles. The library is staffed by well qualified and experienced library professionals who work with the Heads of the technical programs to identify the needs of the students for a wide range of books and other resources, conduct information skills programs to enable students to find, retrieve, and use the academic resources efficiently, and encourage and teach students to access and research scholarly journals and resources. See the section entitled Library Policies and Procedures for more information.

Mobile Phones and Electronic Devices

Abu Dhabi Polytechnic expects students to behave in such a way as to optimize learning. Mobile phones and other electronic equipment (iPods, MP3 players, mini disc players, radios, etc.) that are likely to be disruptive are not to be brought into class.

Students are to turn their mobile phones off and store them out of sight. Answering, texting, or using either a telephone or electronic device in class will be viewed as misconduct and disciplinary action will be taken.

Office Hours

Students may access AD Poly faculty and staff during usual business hours by making an appointment or dropping in during posted Office Hours – 8am – 4pm.

Privacy and Confidentiality

Student information and academic performance is confidential material and will only be disclosed to staff who need to know. In addition, a student's academic performance will only be discussed with the student concerned and their parents, guardians or sponsor.

Parents and family play an important role in supporting students enrolled in tertiary studies. Parents are able to meet with staff and discuss their child's academic life. Parents, guardians and sponsors should contact the AD Poly receptionist for advice about who it is best to speak with and to make an appointment. In the case of an emergency, parents, guardians and sponsors should contact the AD Poly receptionist who will assist with finding the students. Parents, guardians and sponsors should not enter a classroom or any other teaching area without first making contact with the receptionist.

Smoking Policy

Abu Dhabi Polytechnic is a smoke free zone at both campuses. There is no smoking on or immediately outside the premises.

Student Council

The Student Council is an officially recognized organization that advises the AD Poly administration on the enhancement of student facilities and activities to enhance the student experience in terms of both teaching & learning and cultural enrichment.

The Student Council is a self-governed advisory committee to the AD Poly and all recommendations are submitted to the Senior Management Committee and other relevant committees. All students are encouraged to participate in the election of their representatives to the Student Council.

The Student Council organizes students to work with staff to enrich AD Poly's athletic, cultural, and organizational activities. The Student Council also addresses and manages student issues pertaining to resources and the learning environment.

Students are encouraged to form and join clubs recognized by the Student Council such as professional and scientific societies, debate clubs, intramural sports, etc., depending on the student's interest.

Transportation

Details are to be determined.

Work Experience/On the Job Training Policy

On the Job Training/Work Experience is the term used to describe work that has to be carried out by students in order to complete the requirements of the course in which they are enrolled. Work experience could include activities such as field studies, practical experience in manufacturing companies, EASA part 145 organizations, aviation companies, etc. For the most part, the experience of on the Job Training for EASA 66/147 seekers must be completed at an EASA part 145 organization.

Personal Behavior

Students of AD Poly undertaking a period of work experience are required to be aware of their personal responsibility to:

- obey the lawful and reasonable instructions of the organization with which they are undertaking the work experience program;
- respect the security and confidentiality of any information that they may receive from that organization in the course of the work experience program;
- maintain a standard of conduct befitting a student of AD Poly.

14. Library Policies and Procedures

The Abu Dhabi Polytechnic Library (Learning Resource Center)

The Library of the Abu Dhabi Polytechnic is seen more as a learning resource center than a traditional library.

Vision

The vision of the library is to take a leading role in the fulfillment of the AD Poly's mission, vision and goals through:

- Developing education and training programs to equip staff and students with the skills for lifelong learning
- Structuring systems and developing gateways to provide integrated, convenient and client-friendly access to resources
- Developing staff to become innovative information specialists, skilled in providing exceptional service
- Contributing to the development and enhancement of a knowledge based society

Mission

The library's mission is to facilitate access to quality resources and services for excellence in research, teaching and learning by delivering a range of services and technologies to enable the retrieval of needed resources, irrespective of their format or location and providing leadership and expertise in navigating an increasingly complex and diverse information environment.

Evaluation Process

The AD Poly library will evaluate its collection and services on an ongoing basis through daily statistics that are to be kept to assist in the planning and management of the library and will be collated on a monthly basis.

Annual Survey

An annual student survey is to be undertaken to evaluate client satisfaction. Results will be collated and stored by library staff and a report on findings submitted to the Chief Academic Officer and the Librarian will be responsible for recommending any changes to current practice in response to survey findings.

Ongoing Training Sections Input

The library staff welcome input for both acquisition and weeding of material. This is done on an ad hoc basis as well as a formal basis periodically. The library staff also collaborates with the academic sections on an ongoing basis to identify material that is in high demand to ensure that students have access to these resources.

Student Requests

Students may request additions to the collection. Forms for "Requests and Recommendations" are to be made available for students and all requests will be considered.

Library Hours

The Library is open for students, staff and training sections for the majority of the teaching day at the AD Poly.

Eligibility of Borrowers

The following persons are eligible users of the library and its facilities. This includes the right to borrow materials, subject to the rules set in this policy document:

- Student enrolled and with a valid AD Poly library card.
- Teaching and nonteaching Staff of AD Poly and its education partners with a valid AD Poly library card.

Academic Staff may borrow items from the Main Collection for one quarter.

Staff members are responsible for all items they borrow and may not give borrowed materials to students or other staff.

All academic staff loans are due at the end of each quarter, or on the date of the final examination for the subject they teach.

Staff who do not return materials, or who have lost or damaged material must resolve the issue with the AD Poly Librarian. Staff loans that are not returned to the library three months past the due date will be deemed lost and the staff member will be invoiced for replacement. Staff will be billed in accordance with the charges documented in the section below called "Replacement of lost or damaged items."

Staff Borrowers

Faculty may borrow items from the Main Collection for one quarter.

Staff members are responsible for all items they borrow and may not give borrowed materials to students or other staff.

All academic staff loans are due at the end of each quarter, or on the date of the final examination for the subject they teach.

Staff who do not return materials, or who have lost or damaged material must resolve the issue with the AD Poly Librarian. Staff loans that are not returned to the library three months past the due date will be deemed lost and the staff member will be invoiced for replacement. Staff will be billed in accordance with the charges documented in the section below called "Replacement of lost or damaged items."

Student Borrowers

Students must present their AD Poly ID card in order to borrow. This card is not transferable. Students are responsible for all items borrowed using their ID card, and must pay for any lost or damaged items borrowed in their name.

Orientation/Educational Programs

Identified as one of their priorities, the library staff will strive to provide students and training sections with information on the library and information literacy on an ongoing basis. This is done in the following ways:

- The Librarian provides a brief overview of the library for all new students attending on Orientation Day. All new students and staff are given a copy of the library brochure as part of

- their AD Poly orientation pack.
- Brochures will be available for users to assist them with procedures and location of materials and other general information about the library (hours, staff, etc.).
- Reference assistance will be provided for users on an ongoing basis. This includes assistance with identifying appropriate material for studies/assignments and then locating this material within the library; accessing electronic resources such as the electronic database system as well as locating good information on the internet.
- Library shelving will be clearly marked with Dewey decimal classification to assist with easy location of materials for our students.
- Librarian staff will assist our users with locating information that is appropriate to their information needs.
- Students are encouraged to use information in a variety of formats depending on information needs. Formats include: books, journals, newspapers, online databases, e-books, Internet resources, video cassettes, and audio cassettes.

Circulation of Materials(Borrowing)

Circulation of materials is a basic function of the Library. All students and staff of the Abu Dhabi Polytechnic have borrowing privileges. Items are due for return on the date shown on the date due slip.

All returning items must be handed to a staff member at the circulation desk or placed in the return chute. Returning material should not be placed on shelves.

Renewal of Loans

Borrowers may renew loans twice in addition to the original loan, provided the material is not overdue, or reserved for another user.

Inter-library Loan and Cooperative Agreements between Libraries

While the AD Poly Library aims to build a strong resource library for its students and training sections, it is important to have links with other institutions in order to fully support users.

The librarian maintains contact with other academic libraries in the region through both formal and informal networks.

Library Current Awareness Services

The Library aims to provide current awareness to support the information needs of staff and students at the Abu Dhabi Polytechnic.

E-mail messages are sent to the relevant person when new books they requested have arrived and are ready to borrow.

Each month a list of all new acquisitions is emailed to all staff. This list is also posted on the library website. New books are prominently displayed.

Individual staff may be placed on email notification lists to be notified when journals relevant to their academic or research needs are received.

Copyright

The library abides by the fair use clause that states that 10 percent of any given work may be photocopied. With this in mind, the library does not condone the photocopying of entire works of books or journals. The

library collection does not include any illegally photocopied text or journal.

Code of Conduct for Library Users

The rights and responsibilities of all Library patrons are as follows:

- All users have a right to use the facilities of the Library without undue distraction or disturbance.
- Within the precincts of the Library, no person shall act in a manner that interferes with the comfort or convenience of other users.
- AD Poly identification cards must be shown in response to any reasonable request from any member of staff who might require such identification in the course of their duties. Any Library user, whether or not a member of AD Poly, shall produce identification on request from a member of Library staff.
- It is a condition of entry into the Library that staff may inspect all bags, folders or other receptacles capable of containing Library materials and their contents.
- No food is allowed in the library. Drinks are allowed on the proviso that no damage is caused and all rubbish is deposited in bins provided.
- Talking is not permitted in reading areas: quiet conversation is allowed for the purpose of seeking assistance in the use of the catalogues or the collection.
- The reservation of seats or computers is not permitted.
- The Library staff may remove books and other articles left unattended on chairs or tables in the Library for more than twenty minutes. Articles left in these areas at closing time will be cleared away and sent to the Student Services lost property section. The AD Poly accepts no responsibility for personal belongings left in the building.
- No user shall deface, mutilate or destroy Library materials: in addition to any penalty that may be imposed for such conduct; the person concerned shall be liable to pay for the full cost of repair or replacement of damaged materials.
- Users are responsible for all Library materials borrowed in their name until such time as the items are returned to the Library and deleted from the loans register. Borrowers will be charged the replacement cost of any item that is not returned.
- Users should obey any reasonable directions of Library staff in enforcing this Code of Conduct.

Code of Conduct in the Libraries and Other Public Space

Users of the Library and other public space should behave in a manner that does not inconvenience, offend or limit the rights of other users to have access to library materials, study space, and other information technology facilities and services.

This policy applies to all categories of users, including external borrowers and casual visitors.

Standards to be observed within Information Services public spaces

The Code of Conduct sets out the standards of behavior that members of the AD Poly community can reasonably expect when engaged in AD Poly activities.

Users of the Library facilities and services expect an environment that is conducive to study and research. Activities that disrupt such an environment are not acceptable. Such activities include:

- Creation of noise through loud conversations, use of mobile phones, etc.;
- Eating and drinking beverages other than water;
- Smoking;
- Theft of equipment or the property of others;
- Movement of furniture;
- Vandalism;
- Posting of notices without permission; and,
- Unauthorized presence in non-public or restricted areas.

Users of the Library and services expect equitable access to equipment and facilities. Improper use or

obstruction of access to such equipment and/or facilities, including the reservation of seats in study areas and the Library, is not acceptable.

Users of library collections expect equitable and open access to these resources. Unauthorized removal, misplacement or mutilation of library resources or retention of overdue material is not acceptable.

Users leaving the Library may be required to present for inspection any item in their possession or any bags, cases or other material brought into the Library.

Users are expected to provide identification to staff acting in the course of their duties where a violation of the AD Poly policy is in question.

Exclusion from the Library

A person who breaches the above standards may be requested to leave the Library.

Imposition of Penalty relating to Conduct

In addition to exclusion from a Library facility, a person may be penalized according to the misconduct procedures for staff.

Appeals

Any person upon whom a penalty has been imposed may appeal against that penalty using the appeal procedures for staff.

Library Lending Policy

Definitions

"Item" includes any book, pamphlet, periodical issue (bound or unbound), newspaper, manuscript, film, videotape, CD, DVD, microfilm, microfiche, photograph, print, slide, monograph, thesis, cassette, photocopy, sound recording, musical score, map, laptop, DVD player, musical instrument, plan or any other recorded material, regardless of physical form, under the control of the Librarian. In the Abu Dhabi Polytechnic the terms Library and Learning Resource Center are interchangeable.

Eligibility

The Abu Dhabi Polytechnic staff and students are registered to borrow from the Library. An AD Poly Student/Staff Card is also a Library card.

Staff and students of other tertiary institutions and members of the public may make application to be registered as borrowers by completing and signing a registration form undertaking to comply with Library Lending Policies, and by providing identification, proof of address and where appropriate, proof of eligibility for a particular borrower category.

Upon acceptance of an application, a Library card, identifying the holder's category as a borrower, will be issued.

Registrations must be renewed annually. Registration may be cancelled or suspended before the expiry date for breaches of Library Lending Policies.

The Librarian or their representative may refuse an application for registration as a user when in the judgment of the AD Poly Director or that officer, such a registration would adversely affect services to AD Poly staff and students.

General Conditions of Loan

The Librarian has discretionary power to lend or refuse to lend any item at any time.

The Librarian may alter the loan period of any item at any time.

No person may remove an item from the Library without a proper loan transaction having first been made.

A valid AD Poly Student/Staff or Library card is required before any loan transaction is made.

Library cards are not transferable. In exceptional circumstances (e.g. a lecturer's research assistant or a representative of a borrower with a disability or illness) an authorized representative may borrow on a library cardholder's behalf, upon receipt of written authorization, and subject to the discretion of the Librarian.

The Library collects stores and uses borrower information for administrative purposes only. The information collected is confidential and will not be disclosed to third parties without the borrower's consent, except to meet government, legal and other regulatory authority requirements.

A borrower is responsible for the safe keeping and return of all items borrowed from the Library and for the cost of repair or replacement of any item damaged or not returned.

Restrictions are placed on the number of loans a user may have at any one time.

Responsibilities of Library Borrowers

The Abu Dhabi Polytechnic staff and students are responsible for maintaining accurate contact details through the Abu Dhabi Polytechnic Portal. As in compliance with the contractual agreements, the affiliated AD Poly email is the main channel for communication concerning library borrowing.

All other borrowers need to notify the Library of any change of address (postal and email) at the earliest opportunity.

The Library should be notified immediately of the loss of an AD Poly Student/Staff or Library Card.

Loan Policies

Loan policies are shown in Table 1. Overnight loans for 2 Hour Loans are not available during Study and Examination weeks.

Table 2. Loan policies for different borrower categories and different loan categories.

| Loan Category | Penalty |
|---------------|---|
| 2 hour loans | Suspension of borrowing rights immediately the item is overdue, plus a maximum of AED 50.00. |
| 4 day loans | Suspension of borrowing rights immediately the item is overdue, plus a maximum of AED 25.00 per item. |

| | |
|----------------|---|
| 14 day loans | Suspension of borrowing rights immediately the item is overdue, plus a maximum of AED 25.00 per item. |
| 28 day loans | Same as for 14 day loans. |
| Recalled loans | Suspension of borrowing immediately the item is overdue, plus a maximum of AED 25.00 per item. |

Renewals

Short and standard loan items may be renewed for a maximum of five additional loan periods. The new due date is calculated from the date on which the renewal is made.

The Librarian has the option of denying a renewal but will usually only refuse a request for such a renewal if:

- The item has been or is about to be recalled, or
- A hold has been placed by another borrower, or
- The maximum number of renewals permitted has been reached.

Recall on Borrowed Items

At the discretion of an officer authorized by the Librarian any item on loan may be recalled at any time, if it is required for the Reserve Collection or for another borrower. Recall notices specify a new due date for the item on loan, allowing a minimum seven-day loan period.

Penalties for Overdue and Lost Items

When an item is returned after the due date, penalties apply as shown in Table 2.

The penalty for items that are not returned or lost is suspension of borrowing rights plus replacement costs.

Suspension of borrowing rights remains in effect until either all overdue items are renewed or returned and any outstanding debts are paid; or, replacement costs are paid for any item declared lost.

Borrowers are notified of overdue items.

Table 2. Penalties for Overdue Items.

| | Staff | Student |
|--------------------------------------|---------|---------|
| Maximum Number of Loans (all types) | 10 | 6 |
| <u>Standard Loans</u> Loan Period | 28 days | 14 days |
| Number of Renewals | 5 | 3 |

| | | |
|--|---|---|
| <u>Short Loans</u> Loan Period | 4 days | |
| Number of Renewals | 5 | 3 |
| <u>2 Hour Loans</u> Number of Loans | 3 | 2 |
| Loan Period | 2 Hours Also available for overnight loan 2 hours before closing. | |
| Number of Renewals | 0 | |
| Holds | 5 | 3 |

Appeals

Persons to whom penalties are applied may appeal either orally, or in writing, to the Librarian to waive or reduce the penalty, or to defer payment of any fine.

A person making such representations may appeal to the Librarian against a decision relating to a penalty made by another Library officer, and may appeal against a decision made by the Librarian to the AD Poly Director whose decision shall be final.

15. Work Experience Policy

Work Experience

Work Experience is the term used to describe work that has to be carried out by students in order to complete the requirements of the course in which they are enrolled. Work experience could include activities such as field studies, practical experience in manufacturing companies, electricity generation sites, airport or automotive companies, etc.

Personal Behavior

Students of the Abu Dhabi Polytechnic undertaking a period of work experience are required to be aware of their personal responsibility to:

- Obey the lawful and reasonable instructions of the organization with which they are undertaking the work experience program.
- Respect the security and confidentiality of any information that they may receive from that organization in the course of the work experience program.
- Maintain a standard of conduct befitting a student of the AD Poly.

Public Liability

Students are indemnified for their legal liability in respect of third party claims for damages to property or injury to persons while undertaking approved work experience.

Personal Property

A student's personal property is not covered by AD Poly's Insurance at any time. If a student wishes to arrange cover for personal items they must do so at their own expense.

Personal Health and Accidents

The details regarding medical insurance coverage are to be determined.
